You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)422-4210. The part number on the service manual for my VHF-high band monitor is 68P81048A55-G and my VHF-low band manual bears part number 68P81050A95-D.

John Miller reports the current price is $5.70 for service manuals. Motorola advised John that Alert Monitor parts are scarce, with last stocked being in 1995, Knobs are no longer available, though there are many that would fit.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X

SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications Corp. sells used Plectron receivers, in working condition, for $75-100. If you require crystals or reeds, TCS may be able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like" signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors for sale. I'm hoarding them. :-)

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 2000 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation sells crystals, antennas, power cords, owner's manuals ($11 ea) for some older (pre-Uniden) Bearcat scanners. Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229, email: electra@tcon.net,

I cannot furnish schematics, manuals or parts. To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553. You can also download an electronic copy of the user manual for recent Bearcat models from the Uniden web site:

http://www.uniden.com/docs/service/support.htm

Some schematic diagrams may be obtained from Uniden's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.samswebsite.com

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor

controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Matt Roberds fixed a BC220 which experienced memory loss if power was removed by resoldering the positive wire to 2-AA battery holder.

As built, the BC220 logic board is grounded only through its mounting screws. In the BC220, Matt recommends adding real wire ground jumpers from the main board to the feature (logic) board to fix grounding problems.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal chassis. See March 1996 Monitoring Times magazine for BC800XLT capacitor locations and repair information.

The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig and Karl Klein repaired their BC210XWs by replacing the 22uF/35V C98 capacitor.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This display is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of

a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Matt Roberds repaired the Montgomery Wards version of a BC220 and contributed these insights:

"I did add some heat-sinks, but you have to be careful what you do with the TIP29 on the logic board. I added a long, flat heatsink to it and immediately created a whine in the audio. I didn't use an insulator, as this was a temporary first-try. As far as I can tell, the heatsink was radiating noise from the logic board into the front end on the radio board, which ended up being just below the heatsink. Bypassing the TIP29 (a voltage regulator) with disc ceramics didn't work; using a smaller heatsink and an insulator fixed the problem."

"There is also a 220 ohm 1/4 watt resistor on the logic board. It feeds the TIP29 from the main +16v supply. It looked a little crispy. I pulled one end and measured the current through it and it was about 30-35 mA. This works out to right at 0.2-0.25 watt dissipation. I didn't have a higher-wattage resistor, so I substituted 2 470-ohm resistors in parallel."

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to

switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. Gary Bean reports he substituted a 2SA1298 for Q201 and it worked fine. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

Sources for Replacement NiCd Battery Packs

Replacement NiCd battery packs and inserts for the BC100XLT, BC200XLT, BC2500XLT, BC3000XLT, and other scanners are available from Uniden. I've purchased them at lower cost from:

1. Mr. NiCd - E. H. Yost and Company, 2211-D Parview Rd., Middleton, WI 53562. tel. (608)831-3443. email ehyost@midplains.net

2. Battery-Tech Central, 2818 Southland Street SW, Cedar Rapids, IA 52404-4141. tel. (800)267-3087 or (319)364-0855.

Batteries Plus has stores across they country and some have rebuilt Uniden NiCd packs for under $20.

REPAIR TIPS: RADIO SHACK SCANNER RADIOS

Copyright 1997 - 2000 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

I cannot furnish schematics, manuals or parts. Service manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.samswebsite.com

Parts lists for recent and many older models are available on line at: http://support.tandy.com. Parts may be ordered through Tandy National Parts, telephone (800)241-8742, or through your local Radio Shack store. You may be able to obtain some technical assistance from Tandy by calling (800)843-7422, option 2. The RSU (Radio Shack Unlimited) phone number is (800)-433-2024.

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004, but Robert Cummings has modified an LCD from a Miller Engineering (http://www.microstru.com) experimenter's kit and fitted it to his PRO-2004. See http://home.cfl.rr.com/scan/Backlight.html for details.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the

squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad (PRO-43 keypad is RSU#10789808) may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

PRO-7A: Channels 1 - 4 or 5 - 8 Dead

If the first or last 4 channels in your 8 channel PRO-7A
crystal scanner are not working and the lamps for those
channels won't light, replace IC4 or IC5 (type 7400A).

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a team of G-men protect the president while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some models, like the early Uniden SportCats and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $1500 Icom R8500 and $2000 AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC895XLT, BC245XLT, SC200, and Radio Shack PRO-91 and PRO-94 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites. The ICOM IC-R2 and Yaesu VR-500 are the two smallest "pocket" scanners which perform. Both are tiny enough to fit comfortably in a shirt pocket so you can monitor without attracting undue attention.

Looking for value? At $170 discount price, the 100 channel Uniden/Bearcat BC278CLT base is a good value and available at most Sears and Best Buy stores. The Uniden Sportcat SC200 portable performs very well is an excellent value at its $220 street price.

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your

scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, http://www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance. The Premier (Prime) RD-9 and RD-9SMA are about the same length but even thinner.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas. The Austin Condor is available from Grove Enterprises.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna Co., Inc. and is designed to cover both the 2 meter

and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A (available from Amateur Electronic Supply) or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (828)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove-ent.com

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is http://www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is http://www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. Modifying any scanner to receive cellular phone signals is now considered illegal. By federal regulation, new scanner models must be designed to they cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/hamradio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the

Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (http://www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 7825 Black Street Rd., LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial

broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 828-837-9200, http://www.grove-ent.com) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the

public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM. The PerCon Spectrum CDROM sells for under $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM, too.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)

dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes an extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an

invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

Other scanner mailing lists include: scanner@onelist.com, scan-l@onelist.com, scanner@qth.net, and sonofrcma@onelist.com.

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about

4 PM. You must purchase a lunch since we get the room for

- 2 -

free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

All 1999 meetings (except August) will be held on Saturdays at Phillies Pizza, 6300S. Kingery Highway, located in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook, IL,

The 1999 meeting schedule is: April 3, June 5 (picnic at Argonne National Labs), August 7, October 2, and December 4.

The CARMA Picnic will be June 5th, 1999 at the Argonne National Labs Picnic Pavilion, Cass Avenue, south of I-55 in or around Darien or Lemont. The picnic will start whenever someone arrives. The regular meeting will be in the Pavilion at 1:00 PM. If the weather is totally frightful we also have a room inside the Laboratory building available for us.

The Picnic is BYOE (Bring your own everything) If you want to eat or drink, bring it with you, as well as your BBQ or six pack.

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1999 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

4. If space permits, you can replace the stock resistor with a higher value variable resistor ("trimpot") and adjust to suit.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14

	of MC3357 (IC1)

library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than
70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. This article
describes a few of the FM receivers in my collection, and
other models I've tested. It is not meant to be complete.

You may share information with scanner collectors via the
"vintagescanners" mailing list at:

http://www.onelist.com/group/vintagescanners

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have published full length reviews and modifications of
these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004
Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Jan 1996 - Plectron & Motorola Alert Monitors
Feb 1996 - Radio Shack PRO-2042
Mar 1996 - Tips for Fixing Bearcat Scanners
May 1996 - Compendium of Scanner IFs
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Aug 1996 - BMI Nitelogger II tape recorder activator
Sep 1996 - PRO-2022 modifications
PRO-2042 baseband audio tap
Oct 1996 - Radio Shack PRO-2046 mobile
Nov 1996 - Build a wooden mobile radio mount
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable
May 1997 - Uniden/Bearcat BCT7 virtual downconversion mod.
Jun 1997 - Innovative Scanner Patents of the 1970s
Jul 1997 - Uniden/Bearcat BC235XLT portable Trunktracker
Aug 1997 - Radio Shack PRO-64 portable
Sep 1997 - Stridsberg Engineering receiver multicoupler,
G/Wiz board for EDACS trunked scanning
Oct 1997 - Radio Shack PRO-67
Nov 1997 - Sporty's JD-100 Air Scan
Dec 1997 - Uniden/Bearcat BC895XLT Trunktracker
Jan 1998 - Test Equipment Bargains
Feb 1998 - Innovative Scanner Patents of the 1980s and Beyond
Mar 1998 - RELM MS-200 mobile
Apr 1998 - RCA RP-6150 portable
May 1998 - Radio Shack PRO-2050 base Trunktracker
Jun 1998 - Opto DC442 CTCSS/DCS/DTMF display
Jul 1998 - Stub and Par Electronics intermod rejection filters

Aug 1998 - Sony SC1PC portable
Sep 1998 - Orange Book of Scanner Repair
Tone Out Testing (2-tone generators)
Monitoring ACSB (amplitude compandored side band)
Oct 1998 - AOR AR8200 portable
Nov 1998 - Alinco DJ-X10T portable
Dec 1998 - Radio Shack PRO-91 portable Trunktracker
Jan 1999 - AOR AR7000
Feb 1999 - Radio Shack PRO-2066 mobile Trunktracker
Mar 1999 - ICOM RS-8500 software for controlling the IC-R8500
Apr 1999 - ICOM IC-R2 portable scanner
Jun 1999 - Mini-Circuits ZFSC-4-1 4-way passive splitter
Jul 1999 - Racing Electronics RE2000 portable
Aug 1999 - AOR AR16 portable
Sep 1999 - Uniden Bearcat BC245XLT portable
Oct 1999 - Plectron R700 series monitor receivers
Nov 1999 - Uniden Bearcat BC278CLT clock radio scanner
Dec 1999 - Uniden Bearcat BC248CLT clock radio scanner
Jan 2000 - Radio Shack PRO-92 portable scanner
Jan 2000 - Stridsberg Engineering FLT201A FM Notch Filter and
MCA-204 Receiver Multicoupler
Feb 2000 - Yaesu VR-500 portable wide coverage receiver
Mar 2000 - Uniden Sportcat SC-200 portable scanner
Apr 2000 - Understanding Intermod,
(comparison intermod performance of several models)
May 2000 - Radio Shack PRO-94 portable
Jun 2000 - Radio Shack PRO-2052 trunk tracking base scanner
Jul 2000 - Electra Tiger Scan TSA portable

Note: Reprints of Monitoring Times articles are available for $3.00 each plus a self-addressed stamped envelope from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this reprint fee.

ALINCO

DJ-X10T: 1998 vintage. Rugged construction - metal back. Multimode frequency coverage 0.1 to 2000 MHz (minus cellular bands). 20 selectable step sizes from 0.05 to 500 kHz. Knob atop the radio clicks when rotated and serves as a VFO knob, channel selector, and menu navigation control. Several battery pack options for NiCd and alkaline battery cases. Furnished with an EBP-37N 4.8 V, 700 mAH NiCd pack and a sturdy 11 hour drop in charging stand. Loaded with firmware features and complicated to use. Two VFOs and 1200 channels in 30 banks of 40 channels each. Memory banks are cryptically designated, though you can scan combinations of banks. Each memory channel can be programmed with the frequency, an 8 character label, attenuator, a skip (lockout) flag, and mode (WFM, NFM, AM, USB, LSB, CW, AUTO).

Very slow 6 ch/sec scan rate. Rescan delay is about 1 second and cannot be disabled or changed. Auto Memory Write stores up to 40 frequencies but does not check for dupes. 20 linkable search banks with labels. Up to 50 frequencies per search bank can be locked out. Digital clock with on/off timer. Battery saver can be disabled. Ability to scan or search for signals above a selectable threshold or channels with a specific mode. Band scope 7 or 40 steps wide. In short, 30 - 1000 MHz sensitivity is good, few birdies and little intermod. WFM broadcast reception very good. The DJ-X10T squelch can be set to one of 10 levels. We had to keep the squelch set to SQ3 or higher, otherwise it opens at inappropriate times, especially when the battery saver is active. The DJ-X10T instruction manual does not specify the IF (intermediate frequency) scheme. Filters inside the DJ-X10T imply 0.455, 10.7, and 45 MHz IFs. Our tests indicate a first IF of 736.25 or 275.45 MHz, depending on the frequency to which the DJ-X10T is tuned. Our DJ-X10T hears images of cellular phone signals clearly in the 1419.9 - 1444.9 MHz range, 550.9 MHz above their actual frequency. For a full review, including technical test results, see Monitoring Times, November 1998.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio,

otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

AR8200: 1998 vintage. S/N 550004 tested. Portable, high end "super" scanner covers 0.1 - 2040 MHz (minus cellular in USA version). Not a scanner for beginners. Many of the settings are made through the use of menus. Lots of features. 4 AA batteries, steel belt clip, plug-in AM antenna. 1,000 conventional channels in 20 banks, 10 temporary channels, one priority channel. Each memory channel may be programmed with frequency, label, mode, step, step-adjust, offset, attenuator enable, noise limiter, AFC, and write protect. Multi bank scanning. You can enable a 0 - 9 second rescan delay with each scan group, but not per channel. 40 pairs of search limits with labels. Offset capability for monitoring repeater input frequency. LCD display easy to read. Display and keypad backlit using green LEDs. The band scope. Shortwave reception stone deaf on shortwave when fitted with the supplied antenna or a 19" whip. Seriously overloaded on shortwave by a 132 foot long dipole unless we use the built-in attenuator. Supplied "dorsal fin" antenna for AM BCB. Scans slowly (14 channels/s). Requires more current. Audio quality is slightly above other portable scanners. Computer port. One slot for a single plug-in option: voice inversion descrambler, CTCSS search, 256 frequency tone eliminator, voice recorder and playback, or extended (slow) memory. See AOR AR8200 review by Bob Parnass,in Monitoring Times, October 1998, for review with quantitative test results.

ICOM

IC-R10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke

sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997, for review which includes quantitative test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the

ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/BEARCAT AND ELECTRA/BEARCAT

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at http://www.grove-ent.com for a review which includes quantitative test results.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier

vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder.

Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather alert siren. Built-in CTCSS decoder and tone finder. A query feature identifies duplicate memory channels. Test unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see

"The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

REGENCY

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more

than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RCA

RP-6150: 1997 vintage. No frills, good performing portable. 200 channels in 10 banks. No military aircraft frequency coverage. Triple conversion and a flexible battery arrangement. Lacks duplicate channel detection, search skip, and empty channel lockout features of newer designs. Our sample isn't super sensitive at 470 - 512 MHz and has

some intermod around the VHF railroad channels but is generally more resistant to image problems than the BC230XLT. For technical test results and a review, see "The RCA RP-6150 Portable," by Bob Parnass, AJ9S, in Monitoring Times, April 1998.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. See "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative test results.

MS200: 1998 vintage. Made in USA. 200 channel mobile with alpha labels. CTCSS and DCS decoding squelch. Programmable via PC using supplied software. Low contrast, LCD display. Keypad backlit for night programming. Rear panel tape audio jack. Test unit had lots of intermod on VHF-high band. IFs are 280 and 0.45 MHz. See "The RELM MS-200 Scanner," by Bob Parnass, AJ9S, in Monitoring Times, March 1998, for a review which includes quantitative test results.

RADIO SHACK

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range. IF frequencies are specified at 608.005 - 611.2 MHz, 48.5 MHz, and 455 kHz.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod

immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-91: 1998 vintage. Portable made by Uniden for Radio Shack. 150 channels in 5 banks. Can selectively follow conversations in 800 MHz Motorola trunked radio systems. Censors 823.975 - 823.95 and 894.0125 - 896.1 MHz covered by the BC235XLT. Powered by four individual AA alkaline or NiCd batteries. Power save feature. Program key. One priority channel/bank. One search bank. Direct search. Service search omits many police freqs (inc. 460 - 460.5 MHz). While connected to an outdoor antenna, our PRO-91 experiences intermodulation interference in the 161 MHz range from a paging transmitter on 158.1 MHz. IFs near 380.7, 10.85 and 0.450 MHz. See PRO-91 review by Bob Parnass, in Monitoring Times, December 1998, for review with quantitative test results.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners

have no trouble.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they

were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock

out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-2050: 1998 vintage 300 channel Motorola trunk system tracking base made by Uniden. Tight front end. Excellent performance. Chassis-less, plastic construction. Squelch and volume knobs too close and Manual key is hard to find. IFs are 380.7 (approx.), 10.85, and 0.45 MHz. AM and NFM modes are factory set and not selectable. 300 channels in 10 banks and a 2 second rescan delay may be programmed on a per channel basis. Query feature identifies duplicate memory channels. Our PRO-2050 scans at 78 channels/sec., skipping over empty channels. 10 priority channels. Up to 50 frequencies may be locked out from limit search. A single pair of limits may be programmed for a limit search. No Direct key or direct search facility. Factory preprogrammed frequencies for police, fire/emergency, commercial air, public service, and weather, but not marine. See May 1998 Monitoring Times for a review which includes quantitative test results.

SONY

SC1PC: 1998 vintage. Good RF and audio performance. Covers 25 - 1300 MHz, minus cellular phone. Selectable step size and mode. Computer control and downloading with software and PC cable provided. Powered by ordinary AA batteries. Provided CDROM includes both the scanner control program and the multi million record PerCon FCC license database. 10 banks ("pages" in SONY parlance) of 30 channels each. Per-channel 2 second rescan delay. Unlike the ICOM IC-R10, you can scan any combination of memory banks. You can lock out ("skip") memory channels from scanning. The frequency stored in a skipped channel will also be skipped during searches. One priority channel checked every 5 seconds. SONY's limit search is restricted to one pair of search limits, though computer control expands this to 20 linkable pairs. Band search lets you search through 17 bands programmed at the factory. Service search. A cache, termed Intelligent Memory, stores the last 10 unique frequencies that were active for longer than 5 seconds each. IFs (in MHz) are 600 (below 370 MHz), 232.5 (above 370 MHz), 45.0, and 0.455. For a service manual, call SONY at (800)488-7669, and press 3. See "The SONY SC1PC," by Bob Parnass, AJ9S, in Monitoring Times, August 1998, for a review which includes quantitative test results.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

CRAIG (division of PIONEER)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

SONAR

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal

case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X			no
FR105	6	X			no
FR2512	24	X			no
FR2513	24	X			no
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2516	10	X		yes	yes
FR2517	10	X		yes	yes
FR2525	10	X		yes	yes
FR2526	10	X	X	yes	yes
FR2527	10	X	X	yes	yes
FR2528	10	X	X	yes	yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

TENNELEC

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes and extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, including IBM's server:

HAMFEST/COMPUTERFEST CALENDAR 2000 - ILLINOIS
last updated August 3, 2000 |

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, John Wass KA9QJX, Tom Harker, and ARRL for providing some of the information.

AUGUST 2000

Aug 12 (Sat): Quincy, IL - Western Illinois ARC. http://www.qsl.net/w9awe. Info: Jim Funk, N9JF, PO Box 3132, Quincy, IL 62305-3132. Tel: 217-336-4191 . Email: jfunk@adams.net

Aug 13 (Sun): Peotone, IL - 66th Annual Hamfesters Hamfest. Will County Fairgrounds. 45 mintues from Downtown Chicago, take I-57 to Peotone Exut 327 (East). 35 acres of free parking. 14,200 square feet of exhibits open at 8 AM. Flea market open at 6 AM to 3 PM. No additional charge for flea market space. Rain or shine -six covered pavilions for Flea Market. Tickets are $4.00 in advance with double stub, $5.00 at gate with single stub. Children under 12 free. Advance ticket sales and information: SASE and check by July 25th, Christine Mack, PO Box 2161, Oak Park, IL 60303. tel. 708-358-1786, email: christine1@mediaone.net. Talk in on 146.52 simplex and 146.64-(107.2) Stars Repeater

Aug 19 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Aug 20 (Sun): Orland Park, IL - Giant Computer Show & Sale (see below). Orland Park Civic Center, 147th St. & Lagrange Rd. 9:30 AM - 3 PM. Adults $6, children $2.

Aug 27 (Sun): Danville, IL - Vermilion County ARA. Info: | Curt Chambers Wx9ema, po box 80 Catlin, IL 61817. Tel: | 217-431-0684 . Email: wx9ema@soltec.net

Aug 27 (Sun): Glen Ellyn, IL - Computer Central Show (see below). College of Dupage. Corner of Park Blvd. & College Rd. 9:30 AM - 3 PM. Admission $6, children $2.

SEPTEMBER 2000

Sep 16 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Sep 16 & 17 (Sat & Sun): Peoria, IL - Peoria Area ARC. Info: Ron Morgan, KB9NW, or John Coker, N9FAM, both c/o: PO Box 3508, Peoria, IL 61612-3508. tel: (309)692-3378. Email kb9nw@juno.com or n9fam@juno.com. http://www.peoriasuperfest.com

Sep 17 (Sun): Orland Park, IL - Giant Computer Show & Sale (see below). Orland Park Civic Center, 147th St. & Lagrange Rd. 9:30 AM - 3 PM. Adults $6, children $2.

Sep 23 & 24 (Sat & Sun): Grayslake, IL - Chicago FM Club Radio Expo. Lake County Fairgrounds. http://www.chicagofmclub.org. Admission $8, good both days. Info: Mike Brost, WA9FTS, 5127 North Monterey Avenue, Norridge, IL 60706. Tel: 708-457-0966, Email: mbrost@cin.net (the biggest and best hamfest in northern IL - AJ9S)

Sep 24 (Sun): Glen Ellyn, IL - Computer Central Show (see below). College of Dupage. Corner of Park Blvd. & College Rd. 9:30 AM - 3 PM. Admission $6, children $2.

OCTOBER 2000

Oct 1 (Sun): Wheaton, IL - Giant Computer Show & Sale (see below). DuPage County Fairgrounds, County Farm Rd. & Manchester Rd. 9:30 AM - 3 PM. Adults $6, children $2.

Oct 14 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Oct 15 (Sun): Orland Park, IL - Giant Computer Show & Sale (see below). Orland Park Civic Center, 147th St. & Lagrange Rd. 9:30 AM - 3 PM. Adults $6, children $2.

Oct 22 (Sun): Glen Ellyn, IL - Computer Central Show (see below). College of Dupage. Corner of Park Blvd. & College Rd. 9:30 AM - 3 PM. Admission $6, children $2.

NOVEMBER 2000

Nov 5 (Sun): Davenport, IA - Davenport Radio Club. Iowa National Guard Hanger, Mt. Joy Airport. Talk-in 146.88 MHz repeater. http://www.gwltd.com/hamfest

Nov 11 (Sat): Wheaton, IL - Giant Computer Show & Sale (see below). DuPage County Fairgrounds, County Farm Rd. & Man-

chester Rd. 9:30 AM - 3 PM. Adults $6, children $2.

Nov 12 (Sun): Orland Park, IL - Giant Computer Show & Sale (see below). Orland Park Civic Center, 147th St. & Lagrange Rd. 9:30 AM - 3 PM. Adults $6, children $2.

Nov 18 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Nov 18, 19 (Sat, Sun): Ft. Wayne, IN Fort Wayne Hamfest & Computer Expo. Allen County Amateur Radio Technical Society. 2000 Indiana ARRL State Convention. Allen County War Memorial Coliseum Exposition Center. Hours 9 AM - 4 PM EST Sat, 9 AM - 3 PM EST Sun. Admission $5 plus $2 parking. http://www.acarts.com

Nov 26 (Sun): Glen Ellyn, IL - Computer Central Show (see below). College of Dupage. Corner of Park Blvd. & College Rd. 9:30 AM - 3 PM. Admission $6, children $2.

DECEMBER 2000

Dec 3 (Sun): Wheaton, IL - Giant Computer Show & Sale (see below). DuPage County Fairgrounds, County Farm Rd. & Manchester Rd. 9:30 AM - 3 PM. Adults $6, children $2.

Dec 16 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Dec 17 (Sun): Orland Park, IL - Giant Computer Show & Sale (see below). Orland Park Civic Center, 147th St. & Lagrange Rd. 9:30 AM - 3 PM. Adults $6, children $2.

COMPUTER SHOW NOTES

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm. See http://www.computercentralshows.com web site.

Giant Computer shows are held by Micro Media, Inc. Shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (708)974-3123. See http://www.giantcomputershow.com

Computer Country Expo is Lake County's largest computer
expo. The event is held on designated Saturdays from 9:30
AM to 3:00 PM. This show features computers, supplies,
games, parts, software, accessories, CD-ROM, monitors,
diskettes, printers, keyboards, modems, disk drives, cables,
expansion boards, services, etc. Lake County Fairgrounds,
Route 120 (Belvidere Rd.) & Route 45, in Main Exhibit Hall
Building #1=9720,000 sq. feet. For a show map, exhibitor
info, and discount coupon, visit the web site at
http://www.ccxpo.com.

Sure, get one of the many audio "amp on a chip" IC's and build it into one of your speakers. Radio Shack sells several types, a simple mono 2-3 watt amp is all you need.

There's a newsgroup dedicated to you battlers.
alt.radio.scanner.flame_fest
This forum is for fine peace loving hams and hammesses who want to advance the hobby instead of advancing themselves into court on Internet libel charges.
And that's what you jokers are courting.
Every time I come here I see the same garbage about Mackey and Kendrick battling and Lord knows whom else associated with you. Like who cares?
I come here to learn the technicalities of ham radio and last night was taught how to solder a PL259 on a hank of coatch cable..I think the guy said coatch or cotatch or something like that. It's that black wire you plug into your transducer to make the RF flow out into the air.
And pay attention to this. Internet libel cases are skyrocketing and even on a flamethrowing newsgroup, you can overstep your bounds. You guys want to fork over big bucks to a lawyer instead of buying a spanking new Edwood or Yahoo?
Thank about it guys and back off before your wallets run dry.
AF2Y, an annointed Extra

My first thought would be the squelch setting is too tight - set the scanner on a frequency where there is no traffic - open the squelch (until constant static is heard) and then close it until the scanner starts scanning again. You may have to tighten or loosen it depending on the signal your trying to hear.

3486. Re: Digital - end of scanning - again?

Newsgroup: rec.radio.scanner
Date: 2000-08-15 00:00:00 UTC
From: stevw1 <ve5wil@sk.sympatico.ca>
Message-ID: <Vwdm5.1409$juZ4.12714215@tomcat.sk.sympatico.ca>
Source record: 82214

Hi,

I've talked with members of Uniden and they said they WILL NOT be developing a digital capable scanner. They said that it was due to the way the laws relate to scanning in the States. (If its like the Canadian scanner laws - they are considered illegal to own or operate with out a special certification and a DANG good reason to own one.)

> Now that we're dealing with digital, does anyone think Uniden, GRC, or
> whoever will bring out a scanner capable of tracking and decoding the
> digital signals?
>
> Like they say - "If man can build the trap - another man can figure out a

good??
> Thanks,
> Ed
>

Yes, it's excellent, especially if you need the ability to scan motorola,
edacs, and conventional channel banks, all at the same time. The only other
current choice for (self-contained) multi-tracking is the RadioShack
Pro92/Pro2067 models, which do offer some features that the 245 doesn't
have, such as text identification for channels, banks, and trunking IDs, and
500 channels as opposed to the 300 of the 245. But there are problems with
the motorola trunking at times with the RS models. Also the 245 can be
computer controlled, while the RS models only offer uploading/downloading of
frequencies so far.

For a good answer you would have to give the model number of the scanner.
Could be you have the squelch improperly set. Or it could just be that the
conversations that you are trying to monitor are borderline as far as signal
strength is concerned. If it's the latter, a better antenna would help a
lot. The rubber duckie antennas are ok for fairly local monitoring but not
too good for more distance. Also, a lot of mobile EMS units seem to have a
very poor signal, compared to police units at the same distance. They will
sometimes fade in and out. If it's a trunking scanner, you could possibly
have some frequencies missing, etc.

And the source for this info is Rich Wells' excellent 245FAQ, located at:
http://www.strongsignals.net/htm/bc245faq.htm

There are numerous other tidibits about the 245 located there that you may
not have known about..:-)

I suggest printing it out and keeping for reference purposes.

I have a better idea...
Why don't both of you arrange
to meet each other at some hamfest and
flap your toothless gums at each other there?

I love to see old ham radio pharts like you two go at
it, complete with shaking knees, fat blubbering bellies hanging over
yer belts, greasy unwashed smelly hair and clothing which is
straight out of the 70's. Why not re-enact a classic Bluto vs Popeye
type brawl at Shelby or Vienna hamfest? We'd love to see it and laugh
at you two...

I don't know if you can believe this because the source was the guy at my local Radio Shack, but he says one is in the works and will be out soon, but will start at well over a thousand dollars. This price is no surprise, since when my county was switching to digital (Motorola) they did an article in the paper and indicated that the hand-held police radios were going to cost over $6000 each.

Blake just likes the attention he gets, & harasses me until he gets the attention.

Several months ago, I had been ingoring his repeated attempts at causing trouble &
harassing me. So then he did some junior detective work & figured out where my semi-retired elderly father worked & started to make harassing phone calls
to my father's work place.

THAT is how desperate Blake Bowers is to cause trouble.

More detailed IC-R75 specifications and options:

IC-R75 Specifications
This information is taken directly off of the ICOM IC-R75 brochure.

General
Frequency Coverage: 0.03 - 60.000000 MHz
(guaranteed: 0.1 - 29.99 MHz and 50 - 54 MHz only. 0.03 - 29.99 MHz only for
Asia version.)
Mode: USB, LSB, CW, RTTY, AM, S-AM, FM
Number of memory channels: 101 (99 regular, 2 scan edges)
Frequency stability: Less than ±7 ppm from 1 min. to 60 min. after power on.
After that rate of stability less than ±1 ppm/hr. at +25°C (=77°F).
Temperature fluctuations 0°C to +50°C (+32°F to +122°F) less than ±5 ppm.
Power Supply Requirement: 13.8 V DC ±15% (negative ground)
Current drain (at 13.8 V DC): Standby: 0.9 A, Maximum audio: 1.1 A
Antenna connector: SO-239 (50), push connection terminal (500)
Dimensions: 241(W) x 94(H) x 229(D) mm; 9.5(W) x 3.7(H) x 9.1(D) in
Weight: 3.0 kg; 6 lb, 10 oz.
REMOTE connector: RS-232C D-sub 9-pin
CI-V connector: 2-conductor 3.5 (d) mm (1/8")

Receiver
Receive system: Triple conversion uperheterodyne system
Intermediate frequencies:
Mode 1st (MHz) 2nd (MHz) 3rd (kHz)
USB/LSB* 69.0115 9.0115 455
CW* 69.0106 9.0106 455.9
RTTY* 69.0105 9.0105 456
AM*/S-AM 69.0100 9.0100 450
FM 69.0115 9.0115 450
*May differ according to selected IF filter.

Sensitivity:
Frequency range SSB/CW/RTTY AM/S-AM FM

0.1 - 1.8 MHz (Preamp OFF) 2.0 ?V 5.6 ?V -
1.8 - 28 MHz (Preamp 1 ON) .016 ?V 1.6 ?V -
28 - 29.99 MHz (Preamp 1 ON) 0.16 ?V 1.6 ?V 0.22 ?V
50 - 54 MHz (Preamp 2 ON) 0.13 ?V 1.0 ?V 0.2 ?V

SQL sensitivity (threshold):
SSB, CW, RTTY: Less than 5.6 ?V (Preamp 1 ON)
FM: Less than 0.32 ?V (Preamp 2 ON)
Selectivity:
SSB, CW, RTTY: More than 2.1 kHz/-6dB, Less than 4.0 kHz/-60dB
AM, S-AM: More than 6 kHz/-6dB, Less than 20 kHz/-60dB FM: More than 12 kHz/-6dB, Less than 30 kHz/-60dB
Spurious and image rejection ratio: More than 70 dB (except IF through/50 MHz band)
Audio Output Power (at 13.8 V DC): More than 2.0 W at 10% distortion with an 8 load
PHONES connector: 3-conductor 6.35 (d) mm (1/4")
External SP connector: 2-conductor 3.5 mm (1/8 in)/4-8

Supplied Accessories
AC adapter cable or DC power cable (depending on version)
Spare fuse

Hello

I just bought a Realistic Pro-37 but i am absolutly new in using a scanner and the user manual is missing so i have some questions :

- for what i guess the modulation is AM for Air (108-137) and NFM for everything else : Is there a way to force AM where i want ?

- how to change the priority chanel (chanel number 45 for now)

- Where could i find the Pro-37 user manual on the www ?

Message-ID: <39992d95_2@news.iglou.com>
Source record: 82285

Here are some frequencies you might want to monitor for PGA Championship action.

Valhalla Golf Course
452.075, 461.5375

PGA Tour
151.625, 151.925, 151.955
154.57, 154.6
461.2125, 461.5375
462.8875
463.3375, 463.3875, 463.4875, 463.8875, 463.9375
464.5, 464.55, 464.8125

Jefferson County PD
Ch. 1 (Dist. B & C) - 154.74
Ch. 2 (Dist. A & D) - 154.83
Ch. 3 (Traffic) - 155.58
Ch. 4 (Unit to Unit) - 154.86
Ch. 5 (Command/Tactical) - 155.07

I hope I covered everything here. As you can see, some of the PGA Tour frequencies are itinerant and may be used by other companies in addition to the PGA.

3524. Front-end bandpass preselector

Newsgroup: rec.radio.scanner
Date: 2000-08-15 00:00:00 UTC
From: Miller Liu <muller@tp.silkera.net>
Message-ID: <39993051.259D8820@tp.silkera.net>
Source record: 82286
Cross-posted to: rec.radio.amateur.equipment,rec.radio.shortwave,rec.radio.scanner

Hi,

I wonder how a excellent built-in front-end preselector to be. I especially amazed by
11 bandpass band filter and manully tuned Hi-Q preselector which are built-in of new released YAESU FT1000D-MKV HF TRX. You can recieve very clean weak singnal besides strong signals. You can link to http://www.muohio.edu/~4cx250b/web/markv.htm to know
more details.

My question is (1)How can tell good built-in preselector from so-so one? (2)Why most brochure don't tell more infomation about
built-in preselector, even military rx such as WJ-1000A, Ten-tec RX-340? For amateur trx and rx, you have to read through block diagram to know more about preselector info.

I can't get a lot info from ARRL Handbook and the web, please tell me more. Thanks!

Miller in Taiwan

++++++++++++++++++++++++++ QUOTED FROM YAESU DM
++++++++++++++++++++++++++++++++
VRF Preselector Filtering protects receiver front end (160M ~ 20M)
Extending the protection afforded the sensitive front-end components of the receiver, Yaesu's engineers have developed the VRF module: a high-Q input preselector filter ahead of all active devices in the front end, including the main bandpass filters!

Particularly in multi-operator contests or DXpedition environments, where large low-band antennas may be in close proximity, a receiver operating (for example) on 20 metres can suffer Intermodulation interference from on-site 40- and 80-metre signals, compounded by extremely strong 7 mHZ broadcast signals. The VRF circuit provides narrow-band selectivity which prevents this unwanted signal voltage from hitting the input side of the bandpass filter switching diodes, where 2nd order IMD is most often created in an HF Receiver,. Tuning of the VRF is incredibly simple: just turn the VRF/MEM CH knob, and peak the background noise or signal strength!

The VRF is stoutly designed with large (10mm X 10mm) coils yielding high Q, and precision tuning capacitors ensuring that performance does not degrade over time. A total of 31 L/C tuning combinations allow very quick QSY, and the use of ten high-quality, shielded relays for VRF selection ensures that nothing in the VRF can itself contribute IMD.

Receiver front end highlights The MARK-V adopts the low-noise front end of the FT-1000MP. Two low-noise junction FET preamplifiers are provided, one in a tuned configuration with optimised gain and noise figure independently for the high and low bands, with the other flat preamp providing a wide, uniform gain response.

The first mixer utilises a quad of SST-310 Junction FETs in a doubly balanced circuit, resulting in wide dynamic range. Eleven bandpass filter networks provide input protection for the front end, working in concert with the VRF to provide the best ever 2nd order IMD prevention in an amateur transceiver.

It may be, at a later date, that cellular phones will move to another part of the spectrum, or be discontinued or replaced by some other technology, i.e. satilite, etc. Then the reserved portion of the band might be allocated to another service that would be legal to monitor, only we wouldn't be able to!

Source record: 82294

This may have been said before, but the only way you should deal with somebody on a sale of this nature is with a UPS COD. UPS will do a COD delivery for $5.00 on top of the usual shipping charges. They will not give the package to the person on the delivery end unless they have payment. As a sender, you can specify that you will only accept any of the following: personal check, certified check, money order.

Anybody you are buying from who will not agree to do the deal via UPS COD is somebody you should walk away from. I've done the UPS COD, and the hassle factor is zero, so if they won't do it, be suspicious.

Of course there are a few people here who have a gripe with UPS, but I've used them many times for Internet transactions and have never had the slightest problem.

YMMV,

Most services have plans for switching to digital communications whenever funds allow for various reasons (one of which is individuals being able to monitor and sometimes even interfere with their official frequencies).

The advent of trunking brought cries of doom and 'the end of scanning as we know it' from many people because everyone just 'KNEW' that to build a trunking scanner for the public was ludicrous and would be cost prohibitive. Well, technology kept pace and we're perfectly capable of scanning trunked signals...

Now that we're dealing with digital, does anyone think Uniden, GRC, or whoever will bring out a scanner capable of tracking and decoding the digital signals?

Like they say - "If man can build the trap - another man can figure out a way around it"...

B.J.

Have you tried any of the amplified speakers? Radio Shack carries one that looks very similar to their regular one, only it has an amplifier built in, that runs on 12VDC. I've never used one, but a friend claims it works very well!

Thanks for the info. I hadn't heard the bit about the new version using the control channel. I agree, Uniden still seems to have the best trunk scanner products. I just wish they'd give us those nifty features like CTCSS/DCS and alphatags in their trunk trackers. Guess we gotta wait for the BC-780 and, hopefully, a handheld equivalent. I do like my PRO-92A for conventional use. That's really what I bought to do, so I'm not all that disappointed. It's a very good conventional scanner and is probably the best self-contained scanner for finding unknown CTCSS tones. The only rig better that I've seen in this respect is one of the Optoelectronics interfaces with Probe software. The 92 detects and displays tone frequencies in very nearly realtime. The few other scanners (and ham radios) that can search for tones just hunt through the tone list at a very slow pace. The AR-8200 isn't bad, but is still much slower than the PRO-92. Oh well, maybe the PRO-92Z Mk99X will be the perfect scanner....yeah right. Hope does spring eternal...

I use the Radio Shack amplified speaker in my truck. It works quite well.
What I really like about it is that the power automatically cuts on and off
with the audio. The on time is quick enough that you don't loose any of
the audio and the off time is delayed so it's not constantly switching on
and off.

Just wondering what people think is the best all around scanner antenna out there? I am looking for specific models that are efficient across several bands. I currently have a scantenna and want to know if people have tried antenna's that are better. One antenna that I am interested in is the one made by antenna specialists for 25-1300mhz. Can I do better than what i have? I especially listen to VHF low and High band and want something that performs well in this area. Any ideas and opinions are appreciated.

I am Rick Larson

I'm sure Richard has his killfilters activated like he always claims.

This is an example of his perverted style of self righteousness.

Rick,

> Yes, Corky Kendrick
> You will still act like the Ceek-A-Like that you are.
> Shut up.
> Surely you must realize that you are a big part of this problem.

Thank you for your input. However, I do believe that, perhaps, you have misunderstood the situation because you are somewhat unfamiliar with the entire history of Cheek and Mackey. My condemnation of Mackey is not because I was friends with Bill Cheek. It is because of Mackey's deplorable behavior over the last few years and my refusal to tolerate it.

I would respond the same if the situation were arranged differently. For instance, suppose Mackey were Cheek and you were Mackey. If you acted the way Mackey has acted towards Cheek (and others), I would be denouncing *your* behavior. In other words, it's NOT who is involved, but the actions of the involved parties.

As a comparison, William Shockley, one of the co-inventors of the transistor, was one of the greatest contributors to technology of the twentieth century. But, Shockley was also an ardent racist and wrote extensively on the intellectual inferiority of black people. In the case of Cheek, you cannot deny that he has contributed to the enjoyment of the scanner hobby by many many people through his books and articles in Monitoring Times, and the help he gave people in the scanner newsgroups. You can admire the mans achievements, but you might not admire the man. You cannot say the same about Mackey.

I'll bet there have been a few times in your life when you've witnessed a disturbance of one type or another and silently wished someone would speak up, perhaps even to intervene. I am the kind of person that *will* speak up and intervene if necessary. Once again, this is not about Mackey but about Mackey's behavior.

In short, I will not tolerate the reckless and destructive behavior of people like Mackey. I have and will continue to stand up and say so, loudly. I urge you to do the same.

73,

Richard

Too bad he didn't buy it from one of the fine radio places in Canada or Javiation over in England, he could have had an unblocked one from dealers outside of the US. Just like mailorder does not make sense within your home state because of sales tax causing you to order from another state, it's similiar with scanners, no point in buying them in the US anymore, they are too limited, it's best to buy from overseas or Canada, as you get more for your money.

Steven

First, an error is not a mistake. Mistakes are a subset of errors that come about as a direct result of a human decision. However, even if it were a "mistake" as you say, it is still the less costly alternative to a "mistake" made in favor of your side of the argument.

>> The airlines, the FAA, and the hospitals have enacted
>> regulations that err on the side of caution, that's fine with me.
>[snip]
>
> Well, so you're saying that making a mistake is okay with you.

You haven't done a serious risk/benefit analysis before, have you?

>> Is that cellphone or radio call you're making really that
>> important?
>[snip]
>
> Well, but you really don't know do you? So wouldn't you
>want to "err on the side of caution"?

And it would seem that you don't understand the concept. It's hard to imagine a scenario where someone would need to stand in exactly the place where radios and cell phone use is prohibited and say something of such immediate importance that it couldn't possibly wait for them to step outside.

The potential cost is very high. Is the benefit of instantaneous communications worth a life or death risk? Frankly, if this post is typical of your risk/benefit analysis, you aren't qualified to make a decision like that.

The Pro43 is better for cellular monitoring as it has 30khz steps, the 200XLT only has 25khz steps. I know because I have both of them.

Yes, it is illegal in the United States. However, I've never heard of
an enforcement of the law. As long as you adhere to the "Radio
Secrecy" paradigm, I don't see how you could get in trouble.

I would rather they encrypt than take our scanners away. There is alot more out there to listen
to than just police and I would rather be able to listen to everything else without our states or government
taking our scanners away because of the cops being heard. Also, the military is much stronger and more
dangerous than our police force and the military is just as well prepared to kill its own people in case of riots
and so on, than it is to fight a foreign enemy. Our military is the most secretive and dangerous operations
in the USA but anything they transmit is encrypted and sent in proprietary communication formats except for
practice and move-outs.

Last year a new law was made making listening to cordless phones illegal.
Unlike the cell phone issue though, the gov didn't make the scanner companies block these frequency ranges.
What it all comes down to is that the government doesn't feel the need to protect people unless there is financial
profit to be gained. Since cordless phones and their frequencies don't require massive frequency buyouts and massive
amounts of payoffs and perks for those who pass the laws and to the gov itself, the gov has no interest in blocking out
cell phones and if anything, it makes listening in on other people's communication in this modern age, much easier for them
as they don't have to get a wire-tap.

That's bullshit. It's illegal - the rest of your statement is plain stupid.

The thing to remember is this: It has been illegal for decades to eavesdrop on the conversation in the next booth at a restaurant, to listen in on the people sitting in the next seat on the commuter train or to conversations in the next office cubicle. It has at times been held illegal to eavesdrop on your own kids on your own extention phone...
How do you get caught though? You use what you heard to try and make money, or get some neighbor in trouble or for blackmail. If you use common sense over what you hear you have little to fear.

Source record: 82067
Cross-posted to: alt.radio.scanner,rec.radio.scanner

What happens in hospitals is that even low level signals due to cellular telephones and hand-held communications devices have too high a probability of interfering with patient monitoring receivers. Some devices _might_ interfere with patient care equipment -- though those are better tested than receivers.

Where they allow a radio to be used, be sure that radios have been tested against the systems they wish to protect. Anything else is presumed harmful. Whoever operates untested radio transmitting devices near critical patient care or monitoring equipment demonstrates disregard for the safety of patients connected to that equipment. If his operation should cause harm, he can expect to be suitably rewarded for his action.

FWIW, I have seen a case where UHF handy talkies set off building fire alarms. It took some time, but we were able to identify alarm sensors where building security was pausing to call in, and replaced them with better shielded ones.

3593. Alinco DJ-X10 Antennas?

Newsgroup: rec.radio.scanner
Date: 2000-08-16 00:00:00 UTC
From: Michael Clark <mclarknc@yahoo.com>
Message-ID: <399aef39.0@news.ilan.net>
Source record: 82073

Recent posts about the DJ-X10 have pointed out that the stock rubber ducky is (almost) useless. Any recommendations from satisfied customers? I enjoy listening to a wide range of freqs, from local VHF/UHF to shortwave BC bands. I'm looking for something portable - otherwise I can just use my longwire at home....

Thanks,
Michael AA4YH

>Unlike the cell phone issue though, the gov didn't make the scanner companies
>block these frequency ranges.

That's because cordless phones share their frequencies with other things, like wireless mike's, those 49 mhz hands free radios you can buy, baby monitors, etc... they couldn't ban the production of scanner capable of listening to those freq's without making it illegal to listen to everything that shares the freq...

3597. Chicago Air Show Practice

Newsgroup: rec.radio.scanner
Date: 2000-08-16 00:00:00 UTC
From: unclebob@ripco.com
Message-ID: <8nes7i$q3m$1@gail.ripco.com>
Source record: 82077

The Blue Angels will practice sometime Thursday afternoon (weather permitting) and on Friday sometime in the 11am to 4pm time frame.

These will be the best times to check on frequencies used in the upcoming shows on Saturday and Sunday.

Hi all,

I broke the stock, telescoping antenna that came with the Bearcat 890XLT. I need to get a replacement, but I'd like your suggestions first.

I don't have a way to use an outside or roof antenna. Should I just purchase a replacement, telepscoping antenna, or is there something better on the market? I like about 1/2 mile from the tower where my local police/fire broadcast from, but I wasn't always able to hear conversation from the vehicles themselves, just the base.

Thanks,

Michael

3602. RadioShack PRO-2026

ive been out of scanning for about 2 years now.. ive found a Radio Shack
PRO 2026
for a Cheap price.. its a little beat up but as far as i know it
still works

can you still get replacment parts for it??

is it a good scanner to start off with until i can save money for
a better one?
Would this be a good desktop scanner just to play around with?

Thanks!

It is excellent for frequency finding. I've successfully used it in the car,
in malls, racetracks, casinos, emergency scenes etc.
Drawbacks would be that a nearby FM transmitter could overwhelm it. A filter
can solve this.
Also it captures things like paging signals that you don't want, but that's
not really a big deal.
You will not be disappointed in the Scout.

> works fine. Is $50 fair?
>

If you really need the money, then yes $50 would be fine and maybe even a
little cheap.
If you don't really need the money, then why not just hang on to it. The
reason for this is that a few years from now, long after you've forgotten
what you ever spent that $50 on, you may wish you still had the radio. At
that time you may not be able to replace it for $50 and be sorry you ever
sold it. Of course only you can answer these questions, do what you feel is
right.
BTW, if you do post it on e-bay, you may want to refer to "full 800Mhz
coverage" instead of "cellular modified".
Just a thought, and even _that_ might not sneak through.

Phil

3608. Re: Digital - end of scanning - again?

Newsgroup: rec.radio.scanner
Date: 2000-08-16 00:00:00 UTC
From: Walker <worldvista@altavista.com>
Message-ID: <8nf4actbc1@nnrp1.deja.com>
Source record: 82088

Personally, I don't think digital is going to post as big a threat to scanning as most people think. First off, it's going to be very expensive as has already been mentioned, and there will be serious compatibility issues between systems which will hamper the acceptance of digital for quite awhile.

It will be a LONG time until digital really takes off. By the time it does, EVERY scanner is going to be computer controlled (or have the computer built right in on the mobile ones, with a nice 1" video screen!), computers are going to be plenty powerful enough to decrypt almost *any* encrypted communications (remember, this stuff has to be encrypted in realtime, so the algorithms can never been all that complex), and nothing will have changed much. There will be software (some of it gray market or black market) to decrypt various encrypted systems which will be downloadable, just as there are scanners to decode trunked transmissions now. Hackers will be able to write such software far faster than police/fire departments can change to new systems, which will require quite a bit of time and money.

Don't believe Uniden when they say they will never build a digital scanner. If it comes down to staying in business, you can bet their butt they will develop some. The bottom line in any business is money, and staying in business.

I really don't see the threat. It's *way* too premature to predict the death of scanning just because a few police departments are in the pre-planning stages for digital. Like Bart Simpson would say, "Don't have a cow, man!"

Message-ID: <8nf67m$283k$1@newssvr05-en0.news.prodigy.com>
Source record: 82089

I bought my DJ-X10T used, and I didn't get the stock Alinco antenna with it. I thought I was missing something, so I paid Alinco nearly $25 to get one. I am very disappointed in it's performance, but it sure does look good. I have several antenna's but there are two that I use more than any others I use the T144BN antenna from Hobby Radio Stop at www.bearcat1.com I am very happy with this antenna, and it is less expensive than many others. I also have an Austin Condor, which is satisfactory at some frequencies. The T144BN is more satisfactory over a wide range of frequencies. The condor is no good on MW and not very good on SW, but it is ok on VHF/UHF (which is exactly what it claims to be/do).

I live near a taxi cab garage and their trunking data signal seems to bleed all over the UHF frequencies on my scanner every once in a while, CTCSS doesn't even help. I know how to trap frequencies that do that, but that doesn't seem possible here since the data signal jumps around different frequencies in a trunk. What else can I do?

I will assume that you live in an apartment house since you cannot put the antenna on the roof. In other posts here I have suggested some great hints on antennas that were passed on to me since 1987. Another type of stealth antenna is a "spider web". It is an antenna of my own design. Buy a roll of computer "ribbon" cable about 5 to 8 strands wide. Spread the strands apart for 4". Then strip about 1" of covering from each one. Assuming you have a bnc connector on the back of your scanner, take a coax about 5' long and cut the connector off of one end only. Strip the outer cover 5". Dress the ground mesh into a tail configuration by cutting and twisting. Then expose the center wire about 2". Then take the computer ribbon and solder the ribbon to the center wire. From the top of the unspread ribbon and separate the strands into a "fan configuration". Use your favorite method of covering the exposed wire. You now have an antenna that can be hidden behind a mirror, picture or even under the rug! Be sure to use the ground wire. This antenna will work A+. Good luck. N9IPA

If you have a cassete tape player in your truck you may want to get one of those cassete adapters that are mainly sold for listening to your portable CD player through your car stereo, but I just hook it up to the headphone jack on my scanner and the output is sent through the stereo speakers. I can control the volume and tone as well through the stereo. You can get them just about anywhere for under $20.

Good Luck

Ken

Gee,
I go away for over a year and lookie what happens...

Both you guys just take it out on the playground and beat yourselves
to a pulp.

Speaking as a person in the know, Let me clarify a few things:
1. John Mackey was, in fact, removed from 2 forums
on FIDONET because of his questionable behavior
and extreme opinions
2. Mr. mackey has lied so many times, even he doesn't know the truth
3. Mr. Mackey has, at various times, attempted to harrass those who
disagree with his view of the world, even to the point of telephone
harrassment, calling on others to harrass the intended victim
through various other means, and generally made an ass of himself.
4. Mr. Mackey's exploits as a "technician" are well known in portland oregon
(so much so, that everyone there has refused to allow him to touch their
electronic equipment for any reason whatsoever).
5. Mr. mackey's "on the air" exploits have lead to his being permanently banned
from the use of several repeaters in the state of oregon.

Basically, Mr. Mackey has a lot to answer for, but continues attempting to
place the blame on others (by false accusation, obfuscation, inuendo
and base turpitude). His credibility as a ham (as well as a man) is so low
that it cannot be measured.

HE HAS EVEN ATTEMPTED TO HARRASS ME (without much succes)
He is in a permanent state of denial, refuses to give way on an unsupportable
position, continues to rag others for the problems HE ORIGINALLY CREATED
and has even gone so far as to disrespect those members of the SK ham community!

This is the last that I will be heard from in theis forum. Others know the truth
and they will speak their minds in their own way.

You are desperate John. A quick call to Lolenzo T. Poe, (503) 248-3691 (email address is lolenzo.t.poe@co.multnomah.or.us) reveals John Mackey "Jr" is a contract employee with Multnomah County. Next we find (503) 306-5875, ext. 27298 is your phone number. Not some retired guy but stupid sounding John Mackey! Oh yeah, your email is john.mackey@co.multnomah.or.us I'll make sure I forward all your crap to that mail box. Internet phone and E-mail is SO much fun!!

WHo's your Daddy?

Not ext 27298!

Timmy

Reposted without permission ---> Kudos to Richard Kendrick <wa7twi@primenet.com> who is the author of the original version of this story. It was first posted on October 30, 1996 in alt.radio.scanner and rec.radio.scanner.

"All Hail King Mackey The Great Liar"

Behold brothers and sisters, I bring you the profound story of how King Mackey the Great became so. It is an exciting tale filled with wonder, awe, and heroic deeds. Come closer, as I relate this grand history.

In the land of Scannerdom, the county of Power Supply was plagued with a terrible injustice. The evil mercenary force from Capacitor held the people of Smoke prisoner. Repeater, the ruler in exile of Power Supply, offered a rare and unused Radio Shack battery card to anyone who could free the people of Smoke from their Capacitor prison. A young and fearless warrior stepped forward to take up the gauntlet. Repeater told him of the dangers but the young man was undaunted and resolutely set off to free them.

When he arrived at the gate, Mackey was challenged by the fearsome guardians, Positive and Negative. So terrible were these mighty sentinels that even the renowned guardian Cerebus trembled when faced with Positive and Negative. Armed with his trusty screwdriver he didst battle with them. In the hands of a true warrior the screwdriver is no common weapon. Our hero, battle tested and proven in the labs and urinals of Technical School, was much more than a professional. He was a Grand Master of the Number Two Phillips Blade.

The guards fired spinning hex nuts and sliced with the dreaded razor sharp quartertwenty threads. Again and again, using every feint, lunge, and parry the guardians had learned in centuries of defending the cabinet, but to no avail. Mackey maneuvered himself and with one swift strike, he ended it. He had touched both guardians in the only way to kill them. He bridged the gap between them in a move only a Master Bladesman could execute, the Short.

The Capacitor force exploded from the cataclysm releasing the Smoke from their electrolytic bondage. Afterward, the Smoke rewarded Mackey with their highest honor, the Diddler of the Spark.

Mackey, hoisted by his own petard, began the journey home. In the land of Recdotradiodotscanner, he was attacked by the Legions of Ennui. These were no ordinary warriors, but elite shock troops. Armed with the latest in Apathy, Disdain, and Contempt, they lay seige to our hero.

For months, a battle of attrition was waged. One after another, mighty warriors all, they fell. Even I, your humble scribe was a soldier in the Legion of Ennui. Alas, I too, fell before the great Mackey. No one could understand how a single man could withstand such an onslaught as we heaped upon him. Then we learned the source of his great strength. He was the most favored disciple of the malevolent gods, Fraud and Liar. They had taught him the secret fighting languages of Turpitude, Innuendo, and the most deadly of them all, Obscenity. Under their smutty tutelage, he repeatedly repeled the attacks with adroit displays of oratorical onanism.

There was a point in the war when we thought we were going to prevail. We had Mackey surrounded, he was in everybodys kill file, and his ISPs were terminating his accounts as fast as he could login. He had been beaten back to where he stood alone, armed only with a 300 baud modem and a Commodore 64.

Sadly, we all were victim to his great strategy and now he sprang his most devastating weapon. Surrounding him with our keyboards poised for the final death blow, he hoisted his hands above him. Like Moses bestowing the Ten Commandments to the chosen people, in his hands his mail-order diploma proclaming him Master of Communication Technology smote us down.

Cowered by the supreme Divinity before us, a hush fell upon the surrounding army. The only sound was a muffled cough from one of the younger soldiers. We lay prostrate on the ground before him, fearful of his wrath. Who were we to show the temerity to challenge his divine turgescence. We waited. Slowly, he walked through the defeated masses, and went home.

Upon returning to Scannerdom, he found word of his great deeds had preceded him. He was declared Supreme Grand Master Fool of the Universe and the people clamored for his ordination as King. In response, the Church of Scanner Mods proclaimed him King and the great sage and visionary Pope Bcheek presided over the coronation. As he placed the Discone Crown upon his head, he spoke the sacred papal blessing, "This boy reeks."

So there you have it, brothers and sisters. Behold the saga of his fetidness, King Mackey the Great, Ruler of Torpor, Supreme Grand Master Fool of the Universe, Grand Master of the Number Two Phillips Blade, holder of the Diddler of the Spark, Divine Master of Communication Technology, High Priest of the sect of Fraud and Liar, and Orational Master of Turpitude, Innuendo, and Obscenity.

All hail King Mackey the Great Liar.

A blanket ban is useful, in that it insures that radios that are not operating within specs, (dropped or damaged in some way, for instance), from causing problems. And interestingly enough, I just got an email from my brother, who is to undergo surgery for thyroid cancer in two weeks. In his message about notifying us with the outcome of his surgery, he says "They do not permit cell phones in the hospital as
it interferes with the heart monitors so please wait for Debbie to call you."

The hospital radios may be tested, as you say. But outside equipment would be of so many different makes, models, and states of repair, it would be difficult to be sure. I think I'd much prefer that the hospitals err on the side of caution.

It's just like the start of this thread. Much of the radios and other consumer electronics may have absolutely no effect on avionics. But I wouldn't want to be on the plane with the guy that's got the one item that WILL interfere while the plane is on instrument approach during a thunderstorm. The airlines, the FAA, and the hospitals have enacted regulations that err on the side of caution, that's fine with me. I'd rather live without my scanners, cellphone, 144/440 MHz handheld, laptop, etc., for a couple of hours, than die with them (or cause the death of another). Is that cellphone or radio call you're making really that important?

Hey everybody,

DWM communications is located here:

http://www.qth.com/dwm/

Take a moment to look at their website and the shitty products they sell. They sell an "active antenna" called the "Tiny Tenna" with only 3 or 4 componets on a board for 30 bucks! Even a 8 year old could build something like this for a few bucks. And they sell an antenna tuner made out of a pillbox. Somebody there is taking a lot of pills!

This company threatens to sue anybody who says anything negitive about their products. They operate from a post office box, and do not provide a real contact address or phonenumber. They use Hotmail for all contacts. Their a bunch of phonies. Do not trust your credit card or other info to this company. I know personally about several victims who trusted their information to this company, and as soon as they said they did not like the products, there personal information including phone numbers, addresses and credit card numbers was spread all over the internet.

This company is run by a piece of white trash named Bill Lauterbach. He has been spaming all sorts of newsgroups, trying to push his "products" onto people. Do not buy from this company or you will be at a real risk of trouble!

You have been warned. Dont come running to anyone if you get into trouble after buying from this false company. You will be putting yourself and your loved ones at serious risk if you EVER reveal anything or buy anything from DWM Communications. Do not buy from this phoney company!

... A concerned former customer

Well, for one thing, it proves that it isn't stuffed with C-4 or the equivalent, or maybe a zip gun, or a knife. When I used to travel on business with my photo gear (no WAY was I going to check my cameras as baggage!) back in the '70's and early '80's, the security people tripped the shutters on all cameras, flashed all the flash attachments and looked through all the lenses. I carried a small repair kit, pocket screwdriver, 6" Crescent wrench and 6" ChannelLocks, and British Airways made me take them back to the ticket counter and turn them in, to be given to the pilot, and returned to me at the end of the flight. Guess they were afraid I'd take the plane apart in flight.

If you contact the FCC and ask them up front about digital communications
they will send you the information or direct you to a web site. Search for
FCC on your browser and you will find out what is going on. Be sure to read
between the lines. This digital stuff is big bucks and we, the tax payers,
will pay because most people could care less about their rights. One by one
all our rights are being "legislated out" of existence. A lot of folks even
think scanner buffs are red necked, unwashed, long haired, beer drinking
snoops. So I got a college education, went bald, and quit drinking booze.
But I still love to snoop!!! N9IPA

>Was the old system a trunking system? Did it have "voting" capabilities?
>Does the new system replace a bunch of different systems, all on different
>frequencies?

A trunked system cannot employ only voting as the system must be
bilateral. If you have great receive coverage (and it's *much* cheaper
to place voting receivers in a building than wiring in a BDA)
portables inside buildings may get into the system only if they can
receive the control channel. Otherwise the system will still be out of
range of the portables. In conventional, voting receivers can be
placed in many locations and the user conditioned to move the radio
around to hear the transmitter, or several sites can be simulcast -
but the transmission can be initiated independently without the need
to hear the control channel or any transmitter.

>Failsoft guarantees that at least communication will be possible, if the
>controller fails. All the trunking system manufacturers have a version of
>this feature as standard.

The radios will only transmit if they are receiving the failsoft
dataword in low speed data. Otherwise they will still indicate out of
range.

>Passive antenna systems will often produce the indoor coverage necessary.

Depending on the size of the building/ garage/ tunnel.

Passive systems have a hint of randomness. Maybe it'll work, and maybe
it won't. The signal levels are usually very low, but still higher
than if the antenna system was not installed. Engineering a structure
for specific system gain throughout is a better way of achieving
predictable results. Using BDAs ("signal boosters") that can have
variable gain and AGC is better.

Message-id: <8naepigat1@sshuraaa-i-1.production.compuserve.com>

I have an old Bearcat BC 250.
The display only shows a single red dot in the lower right and doesn't
receive anything.
I already replaced one power transistor on the display circuit board but
that isn't enough to get it working.

Is there a source for schematics for this old scanner?
(any other thoughts or advice appreciated).

thanks
Charles
N2AXO

Parts are no longer available for this scanner to repair it..namely the ICs. I
believe there is one that causes this to happen that is long out of
production.Think your radio might be beyond help at this point

.just don't use it in the vicinity of a TV chan 2 transmitter. It'll overload the second IF and that's all you'll hear. The battery pack uses AAA batteries. I sent mine back and had it replaced with a BC2500 which had to go back for the battery drain problem. In the end I ended up with a great portable scanner, 2 new battery packs that's lasted to this day. I've never regretted not having the AR1500 and it's problems, I think I had it all of 2 weeks. enjoy.

I remember the same BS back in the 80's when they started trunking the public service groups.....there are at least three manufacturers now making trunktrackers that allow monitoring of these "unmonitorable communications", for that matter all the "sensitive" communications are done by the cops pulling over and using the good old "telephone" rather than the radio....as for encryption, well even the clear transmissions break up in areas where they would like to scramble....didja ever notice an analog transmission will fade before it quits but a digital transmision doesn't give you ANY notice before it quits....yeah that'll make 'em real happy in emergencies......enjoy....

Wrong on both counts. You cannot possess a digital scanner (which doesn't
exist yet
anyway) without a permit in Canada.

Here is a direct quote from RSS-135 (provisional):

1.1 This document sets out standards for digital scanner receivers. Digital
scanner receivers require a licence. For information regarding the licensing
policy applicable to these devices, please contact Industry Canada, Manager
(DOS-PA), 300 Slater Street, Ottawa, K1A 0C8. Tel.: (613) 990-4747; Fax.:
(613) 952-9871.

For the REAL [il]legal status of cellular phone interception in Canada, look
at Chapter 46 of your Criminal Code, especially Part VI (Sections 183 et
seq).

While it is true that Canada's scanner laws are more relaxed than in the U.S., it does not mean that digital scanners are allowed in Canada. In fact, the original poster is correct: user licensing will be required. I recommend you have a look at IC's Web site on spectrum management, as document RSS-135 "Digital Scanner Receivers" clearly outlines the government's proposed regulations should such a device become available.

I think we should have the right to listen to ANY radio signal we can pull in. We should oppose any encrypting from law enforcement agencies! We should have the right to monitor them. They shouldn't have any secrets. There is no need to encrypt police calls. If the purpose of it is to keep us honest, then how will we keep them honest?? Instead of just giving up we should rally to gether and fight any such legislations. Our first major set back was when the government outlawed cellular reception. We just sat back and accepted it, and even now justify it. We live in a very paranoid country. No other country bans or restricts radio waves as much as our country does. What are we affraid of? Digital could very well mean the death of scanners. Not that we couldn't make scanners to receive digital, that's the easy part. The difficuilt part would be to decode the encryption which would be next to impossible, not to mention illegal any way. No doubt law enforcement agencies, and government agencies would eventually switch to it. Then we would have to settle for fire and ambulance calls, and of course there is mall security and fast food drive thrus. There is a shred of hope if we can fight legislation for encyption. We have good reason to do so. We need to let our representives and senators know how we feel, and try to rally enough supporters. This I'm affraid is our only hope. Otherwise we may all have to settle to listen to, "would you like fries with your hamberger" on our scanners.

On a finally note, unless you live in a heavy populated trunk city, you may
want to consider the pro 92 for it's large alpha tag screen. It's nice to
organise your channels by bank names, and frequency names.

: 2) Will I be allowed to use it on the plane?

You will probably have to turn the scanner on at the checkpoint, to
prove that it works. I don't really know what this accomplishes, but
that is the usual practice.

Many airlines allow you to use the scanner when you are at cruising
altitude, but require that they be turned off for takeoffs and landings.
Some still prohibit all electronic devices.

In rec.radio.scanner Robert H. Eisner <rheisner@pacbell.net> wrote:

: FCC Lists the callsign WPMV365 and specifies the following frequencies

: 460/465.6750 MHz
: 460/465.7000 MHz Control channel heard on Saturday
: 460/465.7750 MHz Control channel heard on Friday
: 460/465.8000 MHz Control channel heard on Sunday (today)
: 460/465.8750 MHz

I am surprised that 8750 was not the control channel on Sunday. It may be shut down. The normal practice with Motorola trunking is to use all regular channels (except for the lowest frequency) in rotation for control.

The reason the lowest is not used is that is where the required periodic identifier is transmitted. As that would interrupt the controller, it is simply left out of the rotation.

: Licensee is United Airlines.
: Syatem ID: 742b.

: I have no idea what the current Base and Offset are for this system.

On 900 MHz, the offset is 29 or 30 MHz. I don't know about 460.

: All I can say is that radio transmissions (by police and fire personnel) are
: forbidden in our ER, etc. It may be that the hospital personnel are briefed
: on areas where they can and can not use their radios. Proximity to certain
: areas such as those mentioned above may be the determining factor. The
: staff can be taught where it is safe to use the radios whereas outsiders
: might not realize they are in close proximity to sensitive equipment, hence
: the blanket ban. This is just an educated guess, I don't know for sure. I
: do have some friends on the maint. crew at the hospital, if I can find
: anything out I'll post it.

It is unlikely that any radio or cellphone would interfere with the
equipment, unless within a few feet.

Rather than a blanket ban, thorough testing should be performed. It is not
hard to do, it just takes a while.

I did such testing, when the company I work for installed a Trunking system,
to make sure the handhelds did not interfere with computer equipment or any
of the various sensors.

WRONG! I stated that Cheek was NOT a member of Mensa, I did not say
that he had never been a member.

3674. Re: Sportscat SC150b any good?

Newsgroup: rec.radio.scanner
Date: 2000-08-16 05:18:31 UTC
From: KenCaz <Kencaz@earthlink.net>
Message-ID: <399A23C0.EB5A8274@earthlink.net>
Source record: 82119

I have been using my Sportcat 150b for a year and a half and have had no problems with it at all. I purchased a refurbished model from Uniden for $120.00 http://www.uniden.com but I think there going for about $179 now.

It has some intermod problems and does not get military air band 216-400 Mhz (needed for airshows) but is great for just about all other emergency and ham bands.

If you can still get them, I would suggest the Sony ICF-SC1 or the PC model. I got my for $99. I has continuous coverage from 25 to 1.3 Ghz and 300 channels. It only takes 4 AA batteries, however, I have been using rechargable NiMh's and they work fine.

I would consider first what you want to listen to before buying the Sportcat. If you have Trunks in your area you'll be missing a lot. BTW Uniden is selling it's BC245XLT 300ch Trunker for 168.00.

http://www.uniden.com/docs/store/itemlist.cfm?cattype=prd

It's referbished and back ordered but I would get one at that price. Look around you may be able to get it cheaper...

Good Luck.

If I recall correctly, Environment Canada uses (mostly, if not exactly)
the same frequencies as the US service. Try the US frequencies and
you'll probably find it:

162.550
162.400
162.475
162.425
162.450
162.500
162.525

There should also be some marine weather (where applicable!) on 161.650
or 161.775.

Has anyone been prosecuted under this section for using a scanner to
listen to cellular phones who did not exploit what they'd heard somehow?
(ie Not keeping it to yourself - I will leave the question of why the
police would be after you if you had kept it to yourself for another
day...)

Also, there were some government proceedings back in the 1980s on the
question of whether cellular phones constituted "private communications"
-- which is what S184.1 deals with. IIRC, the decision made then was
that, in fact, cellular phones were not considered private. This may
have changed since, however.

And just what do you get out of 'cellular monitoring'?
You only hear one side of the conversation, and that's only while it stays in the same 'cell'...
Anyway.. Because of the lower prices for digital phones/plans nowdays, I've no idea why people continue to let you people listen in by using analog..
Btw, I don't think it should be illegal to listen (which's probably what you assumed after reading the above)... If a person's going to transmit uncoded, they should expect to be heard.

"Me" <me@here.org> wrote:
> Last year a new law was made making listening to cordless phones illegal.

The following is a re-post of a short disertation on the various laws
and their effect.

The laws of the United States, passed by Congress, are codified as the
United States Code (USC). It is divided into titles covering various subjects.
Title 18 includes the criminal laws and penalties; Title 47 covers
telecommunications. A law can be refered to by its original name (i.e. "The
Communication Act of 1934") or its entry in the USC. A specific section
would be refered to by title/USC/part/section, i.e. 47 USC 605.
To carry out the law, the various government agencies create regulations,
which are codified as the Code of Federal Regulations (CFR). It is likewise
divided into titles, with the FCC's rules in 47 CFR.

18 USC 119 bars the disclosure of any electronic communications to
which you are not a party (with certain legal exceptions), and sets the
penalties. 47 USC 605 (the Communications Act of 1934) also bans the
disclosure or use of third-party communications. With minor changes, this
has been the law for 60 years.

In 1986 Congress passed the Electronic Communications Privacy Act (the
ECPA), which added definitions to the law that banned listening to cellular
telephones. It also banned the monitoring of broadcast auxiliary, SCA and
scrambled signals.

In 1992 Congress passed the Telephone Disclosure and Dispute Resolution
Act (TDDRA), which instructed the FCC to ban the manufacture or import of
scanners capable of receiving cellular. In accordance with this law, the FCC
modified 47 CFR Parts 2 & 15, effective 26 April 1993. Note that this does
not affect the sale of such scanners, so long as they were made or imported
before the cutoff date. It also does not bar individuals from modifying
their receivers.

On 25 Oct 94, the Digital Telephony act was signed. Buried in one of the
additional sections was a change to 18 USC 2510 & 2511 that added cordless
phones to the original ECPA ban on receiving cellular.

In short:
It is illegal to manufacture or import cellular-capable scanners.
It is illegal to listen to cellular (and cordless) transmissions.

It is illegal to divulge any communication to which you are not a party.

> recommend for that?

In that case forget the 800 MHz filter, but do try the attenuators.
They will reduce the signal on all frequencies and hopefully will kill
the overload while leaving enough signal to monitor what you want.

Depending on the location/direction of the undesirable signal vs. the
ones you want to hear, a directional antenna may help. That is a bit
expensive to try unless you happen to have a UHF yagi lying around.

Sent via Deja.com http://www.deja.com/

I know this radio isn't available for purchase in the States just yet, but I just discovered another cool app for it. Major League Baseball teams have begun putting wireless cameras on the catcher's masks so that you can see the batting and fielding from the catcher's perspective. With two R3s, you could see your TV station's game coverage and the "catcher cam" simultaneously.

> You haven't done a serious risk/benefit analysis before, have you?

Tons of them actually.

> >> Is that cellphone or radio call you're making really that
> >> important?
> >[snip]
> >
> > Well, but you really don't know do you? So wouldn't you
> >want to "err on the side of caution"?
>
> And it would seem that you don't understand the concept.

Actually, I understand it very well. You seemed to have
missed what I was trying to say.

> It's hard to
> imagine a scenario where someone would need to stand in exactly the

> place where radios and cell phone use is prohibited and say something
> of such immediate importance that it couldn't possibly wait for them
> to step outside.

And one of the hard parts about doing risk/benefit analysis
in the manner you are suggesting is that it requires you to
know in advance ALL of the reasons for a particular activity.
If you think about the expression "hard to imagine" it implies
a certian possibility.

> The potential cost is very high. Is the benefit of instantaneous
> communications worth a life or death risk?

Under what circumstances? This is the point. "Err on
the side of caution" basically implies that one knows all
the potential outcomes. This is rare. Frequently, folks
who claim to be doing such, are really only referring to
certian scenarios. There is something known as "unintended
consequences". If something is actually dangerous then
avoiding the activity will reduce risk. But if it is
only presumed to be dangerous, avoiding it will not
actually reduce risk, and, in fact, can therefore
increase actual risk in certian situations. Just
because you don't know in advance what those risks
are doesn't change that. In fact, not knowing can
actually increase the risk exposure.

> Frankly, if this post is
> typical of your risk/benefit analysis, you aren't qualified to make a
> decision like that.

Try going back and reading what I actually wrote, as oppose
to what you read.

"Erring on the side of caution" is essentially an acceptance
of ignorance. You don't know actual outcomes so you assume that
because a particular approach is "safe" in a known set of
circumstances it will be safe in all. This is rarely true.
It's like "rules of thumb". They have a broad application
but if you don't know the limits or exceptions of the rule,
they are as capable of harming you as they are helping you.
Doctors have been handing out antibiotics for decades to
"just be on the safe side" and now we know what has been happening
is that we have been developing antibiotic resistant infections.
Many of those perscriptions were unnecessary or inappropriate,
but I'm sure they felt they were "erring on the side of caution".
The actual result though was that their actions were ultimately
quite deadly.

If these phones are truly a risk to the flying public we
should know how and how much and take direct steps to address
the known dangers. "Erring on the side of caution" is

laziness and presumes knowledge which doesn't really exist.

John, I realize following a thread is difficult for you, it explains your being a blithering idiot.

But in the message you replied to, it clearly stated what we were waiting on. Have you considered remedial help with your reading?

We are waiting on the name, badge number, report number, of the officer that you supposedly filed a report with on me for my alleged phone call.

You have been asked for this time and time again, and you have been proven a liar by default for not providing this information.

> still going on.

This is to be completely expected Eric! R.H. has cleaned up all
of the ham radio cesspools (14.313/3894.5/3.853/3.865 etc etc..)
and there is *nowhere else* for these obcessive compulsive ham radio
jammers to fly to but the internet newsgroups, seeing that the FCC has
got all of them DF'ed and ID'ed their all now sittin ducks on the radio
transmitter.

> You have the pro-code V. the no-code,
> John Mackey V. Everybody
> complaints about whats happening with several players on
> 75/80 meters...
>
> Its the same old shit day after day... when are you guys going
> to wake up and smell the coffee? no one in the REAL WORLD
> cares much for all this complaining...

But THEY CARE about it Eric. It is their ONLY purpose
reason left for suckin in oxygen. I personally wish that R.H. had
never come on the scene. They'd all be back on 14.313 and
one of several shitstained "spots" on 75 meters. I really do miss
the Mike & Judy show, the OTK wars, Festering-Zit's
pontificating on politics, BigAl in Hickory creative jamming
tapes, Vietnam Dan sayin he's gonna "kill em and eat em all"
the transmission-guy in Benton Harbor what loves pueto-rikans,
and best of all - James R Vining's all-night drunken ramblings
on 3.853 (Now there's a guy who's filthly mouth alone could
knock a moulting buzzard from off of a piled-high shitwagon
at 50 yards)

Trust me Eric: "B.H." [Before Hollingsworth] ham radio ssb
swl'ing was like watching an HBO comedy special. You had
great entertainment for much less than the cost of a cable
TV subscription all freakin day and night.

Now all we gots left is that commensurate flaming asshole
"preacher john" on 14.313 and the right winger yahoos on
3950. Phooey! The arbitron ratings just took a nosedive
into the toilet. Watchin the freakin DNC on C-SPAN is more
entertaining!

Hi Again,

Last weekend I took the trip I wrote about previously and went through security with my scanner, extra battery pack, and 2 antennas plus cell phone and recharger units for both all in my carry-on bag and zipped right through security at two airports without question. Didn't have to take them out or turn them on. Nothing. And the Benchmade AFCK (folding knife) I was carrying didn't even raise an eyebrow.

Bag full of electronics and a knife -- not a word. They get an "F".

>Then I guess that makes listening to "toy" walkie talkies, baby monitors
>and wireless intercoms illegal too since they use the same frequencies.
>Doesn't that sound kinda' broad to you?

It's not that listening to the cordless phone frequencies is illegal.. it's intentionally monitoring cordless phone calls... if your baby monitor just happens to pick up your neighbor's phone and you didn't do it intentionally, then you're safe.. :)

Now I know there are scanners for sale that can decode
GSM-phone conversation into voice audio,but the the
price (around 2500 USD)is to high for me.
So I am looking for a cheaper scanner.
Or software to run on a computer.

Uh, yes it does, now. The FCC has clarified that to mean that ANYone
modifying a scanner to cover cellular is 'manufacturing', whether for others
or their own use, and it's not allowed legally.

HW,
What we are all wondering is how the airline(s) felt about your using the scanner onboard? Did you do any checking, like with the ticket agent, steward(es), flight crew, or the inflight magazine?

BTW, the part about the knife does disturb me. And what were you going to do with it if security hadn't let you by with it.

John,
I'll remind you of the same thing I just reminded frg9600 of
just 24 hours ago:

any attempt by you to start an arguement with a fellow @home user
will be reported to the @home abuse dept. Basically, right now, you are
violating TOS here.

Now, if you bother to bounce an e-mail here, you'll find out that
n7zzt@home.com is a real account. as for proudhawk19021@home.com,
I have no idea who that is, so please don't go draggin others into your
fantasy.

In the meantime, you have a lot to answer for. Should I just take all your
postings of late (they are easily accessible from deja) and forward them
as a digest to @home? Abusing behavior like your will not be tolerated.

now, start telling the truth or you might as well leave the net.

As with the Heisenberg Uncertainty Principle, there are no absolutes
when predicting the future. Anyone who has done this sort of analysis
knows that.

>increase actual risk in certian situations. Just
>because you don't know in advance what those risks
>are doesn't change that. In fact, not knowing can
>actually increase the risk exposure.

You're assumption is incorrect. Erroring on the side of caution
doesn't imply that one knows *all* the potential outcomes. It means
that one knows the *likely* outcomes and that one chooses to error in
the direction where damage is less *likely*. Again, anyone who
understands risk analysis wouldn't make a statement like that.

You assume that the risk can be quantified. In the vast majority of cases the effort required to do so is ridiculously out of proportion from the typical benefit. To get a reasonable risk/benefit analysis you'd need to have another case where life was in jeopardy from NOT using a radio in a zone of risk.

We're talking policies here, not laws. We're talking about control of situations where life is at risk. You're saying that because we can't know all possible situations that we should allow everybody to do their own thing and use whatever they see fit, whenever they feel the risk is worthwhile.

The risk of doing that is out of proportion to the benefit because the general public isn't even aware of the situation in most cases. You argue that you know better. That's all well and good, but most people don't know anything about the risk or the reward. They merely act on impulse, unless told otherwise. In a life threatening situation, the safe thing to do is to tell these members of the public what is appropriate.

> "Erring on the side of caution" is essentially an acceptance
>of ignorance. You don't know actual outcomes so you assume that
>because a particular approach is "safe" in a known set of
>circumstances it will be safe in all. This is rarely true.

>"just be on the safe side" and now we know what has been happening
>is that we have been developing antibiotic resistant infections.
>Many of those perscriptions were unnecessary or inappropriate,
>but I'm sure they felt they were "erring on the side of caution".
>The actual result though was that their actions were ultimately
>quite deadly.

And let's get back to specifics, shall we? We're not talking about antibiotics. We're talking about using a communications toy. We're not talking about prohibiting it altogether, we're talking about limiting it. The risk of erring on the side of caution in this case is nearly zero. The risk of doing nothing is far greater.

And you claim you know what you're talking about?

> If these phones are truly a risk to the flying public we
>should know how and how much and take direct steps to address
>the known dangers. "Erring on the side of caution" is
>laziness and presumes knowledge which doesn't really exist.

When you have an electrical engineering degree and an instrument rating for your pilot's license, you'll have the authority to tell your passengers whatever you want. Until then, don't assume you know more than the person who is certified to keep your ass out of danger. The risk of doing that is almost certainly greater than the reward.

Peace.

What I am suggesting is that THEY don't know. I make
no assumptions about the superiority of my knowledge. What I
am suggesting is that if they continue to operate in ignorance,
they continue to run a risk from that ignorance despite their
intentions of "erring on the side of caution". Without
knowledge, they have no idea which side they are erring on.
If it is truly as dangerous as is suggested, it should be
addressed by something far more significant than a rule of
thumb intended to "err on the side of caution".

RicK (I love the way you mimic CorKy),

No need for an impartial poll. You or your lover John-Corky can hold it on here. Some other Larson already did and only 3 people defended Toiletboy 48 have voiced their hatred of him. Doesn't change your Love John-Corky posting over 50 off topic messages a day. Now crawl back under your John-Corky where you came from.......Corky uhhh, John-Bowl, oh yeah, RicK.

In fact, some of our local police use the Nextel system. A lot of them carry the Nextels with them in their patrol cars. I think this will greatly slow down the move to digital (dispatch and such) as when they need to have a private conversation, they just go to the Nextel. Their normal system is a regular VHF system, not trunked or anything.

Yeah, I notice that on my digital/analog cellphone... In analog I'll
sometimes get cracks and static when I'm on the outskirts, but in digital
mode it'll just disappear all of a sudden with no warning!

RicK Larson in the exact same style as his luv John-Corky
blathered.....
> John
> It seems Mr Cheek and the Cheek-A-Liles have made this NG what it is
today.
> They are pretty low on tech savy if they had to get instructions for base
> band audio from Uncle Bill!
> Rick

Right on RicK-Corky. Let's have a look at John-Corky Mackey shall we?
Toilet-Boy's accomplishment

Toilet-Boy John-Corky
-smoked power supplies
-smoked repeaters
-300+ off topic messages a month minimum
-for 5 years a constant off topic of radio newsgroups
-VE a volunteer position, any ham can memorize the material and do it.
-OO a volunteer position, any ham can memorize the material and do it
-mental health aide/rent a mental health aide (not to be confused with RNs
or LPNs)

Uncle Bill's
-owned/published/created 2 radio related magazines
-wrote and published 3 well known scanner mod books
-developed and sold many radio related devices including the CE-232
-was a monthly columnist for the Premier scanning publication Monitoring
Times.
-Moderator of the Fido scanner group
-hundreds of messages helping people with scanning issues
-hundreds of phone calls for free, helping people with scanners
-owned and operated Commtronics

The record speaks for itself. You can twist and turn in the wind, lie all
you want Rick, you can't change the facts. Try and discount them, make all
the noise you want RicK but even a tenth of Uncle Bill's accomplishments are
hundred times more than John-Toilet-Boy Mackey has even hoped to do.

Spew away RicK, you are closely reaching the level of Mackey-Bowl
reincarnate.

Or should I have said SNIP away? You haven't been able to fully reply to
anything, no reason to expect it now, ehh RicK? Just like John-Corky, snip
away and pretend it isn't real. Snip away, cover your eyes and it will all
go away. The John-RicK way!

Yes, technically it constitutes an illegal wiretap. However, it isn't
illegal to produce a scanner in the US that is capable of receiving those
frequencies, as it is with cellular.

I just got the AR 8200 MK II (unblocked) from the UK. It is such a vast improvement over the previous 8200! Improved sensitivity, selectivity, and a backlite bright enough to use as fog lights! The MK II is now black. The capabilties of the MK II is enormous. Accessaries for it includes a flash card that can hold 4000 channels. There is plenty of free software for it. It comes with a swivial antenna. The manual is very easy to follow and undeerstand, and even at 160 pages you can be scanning in just 20 minutes or less!! It has the most features I have ever seen on any radio! In other words, the AR 8200 MK II kicks ass!!

Regards.
Jim

This doesn't surprise me at all! When I flew to Florida about a year ago, I walked through Detroit Metropolitan Airport Security checks with a big ring of keys, a big heavy stainless steel watch, a pager, a metal money clip, a big metal belt buckle, a metal pen & pencil set in my shirt pocket, and a ring...NO problem!

When I left Florida to come home, equipped with the same stuff...I had to shed it all, including a remaining roll of Certs, who's foil wrapper still triggered the metal detector! Even more exciting was Vegas, where it detected a small metallic arch in the sole of my shoes!

My major point is that the "end of scanning" has been predicted for a long time, and I think it's a bunch of crap. So has the end of shortwave (HF) broadcasting (and the hobby). The internet is supposed to destroy HF, but it won't. A $29.95 shortwave portable is far cheaper in most countries than a computer, especially third world countries. Scanning will stay around too, but for different reasons.

Worst comes to worst, you won't be able to listen to the police anymore. Just one small part of the scanning hobby. There are going to be new and interesting kinds of services on the VHF/UHF bands that the public WILL be able to monitor, like UNENCRYPTED digital transmissions perhaps even utilizing video. Not everything that goes digital is going to use encryption. The reason encryption is expensive is that a royalty must be paid for every radio manufactured to the company licensing the encryption algorithm. And there WILL be compatibility issues that will hamper encryption, at least for awhile.

Out with the old and in with the new, sure, but there's no real threat to scanning that I can see. Scanners are going to change and mutate but the hobby itself will stay around.

W.

Just because John is an asshole doesn't make his opponents saints. It's
fairly obvious to even a casual observer what's been going on here the
past year or so since Cheek disappeared. The solution is equally
obvious, to anyone who's marginally enclued.

Do you want to measure accomplishments RicK? Start a new message and lets go. Keep in mind RicK-Corky, I haven't claimed to have given anything back. I am sure it is more than you, but so what? Your luv John-Corky is the person making the claims. I just posted a comparison of John-Corky and Uncle Bill. Sorry to have exposed your luv for the fraud he is and the lackey you are.

RicK Larson suffering from lack of oxygen pulled his head out of John-Corky
and mumbled.....

> Finally you come clean about your postings.

You mean where I stated "I just posted a comparison of John-Corky and Uncle
Bill. Sorry to have exposed your luv for the fraud he is and the lackey you
are." Yes that was the point of my post, it was clean.

> They are meant only as a disruptive force and you admit it.

Seek help. I said no such thing RicK-Corky-John.

> Just sinoff this NG and I will.

If it typo's like a John-Corky, has a problem with coherrent thought like
John-Corky it must be RicK-Corky. Sure Rick, if you can get John-Corky to
join in I will cease all postings on here. What a Joke, you and John-Corky
can't handle it. I have made that challenge many times, JOhn-Corky would die
if he couldn't continue with his show on here. Over 6 years running. You
two stop, I stop. BINGO! No problem RicK.

Your luv doesn't come close to comparing with Uncle Bill. Uncle Bill made
him look, well like he looks now, a bumbling inept John-Corky-RicK.

Get over it. Get it over with.

> test

It's changed. The ECPA as revised in 1994,

18 USC Sec. 2511
TITLE 18 - CRIMES AND CRIMINAL PROCEDURE
PART I - CRIMES
CHAPTER 119 - WIRE AND ELECTRONIC COMMUNICATIONS INTERCEPTION AND
INTERCEPTION OF ORAL COMMUNICATIONS

Section 2511

(4)
(b)
(ii) if the communication is the radio portion of a cellular
telephone communication, a cordless telephone communication that
is transmitted between the cordless telephone handset and the
base unit, a public land mobile radio service communication or a
paging service communication, the offender shall be fined under
this title.

The whole law, with notations, is available at
http://trac.syr.edu/laws/18USC2511.html

It's online in other places, but watch the dates...many versions don't have
the 1994 and subsequent amendments

> I go away for over a year and lookie what happens...

Yea, you come back here trying to lie again. Posting under different identities
of N7ZZT@home.com and then proudhawk19021@home.com. Just like about a year ago when you were using to identities of N7ZZT & Hawke to cause trouble here on usenet & were run off. THAT is "what happens".

> Speaking as a person in the know, Let me clarify a few things:

The LAST thing YOU are is a "person in the know".

> 1. John Mackey was, in fact, removed from 2 forums
> on FIDONET because of his questionable behavior and extreme opinions

This is your first LIE, during my time on Fidonet I was NEVER removed from any "Forums on Fidonet".

> 2. Mr. mackey has lied so many times, even he doesn't know the truth

When have I lied? Be specific with verifiable proof.

> 3. Mr. Mackey has, at various times, attempted to harrass those who
> disagree with his view of the world, even to the point of telephone

I have NEVER harassed ANYONE.

> 4. Mr. Mackey's exploits as a "technician" are well known in portland oregon
> (so much so, that everyone there has refused to allow him to touch their
> electronic equipment for any reason whatsoever).

Excactly WHO in the Portland area has "refused to allow" me to touch their electronic equipment?

> 5. Mr. mackey's "on the air" exploits have lead to his being permanently banned
> from the use of several repeaters in the state of oregon.

Exactly WHO has "permanently banned" me from exactly WHICH repeaters in the state of oregon?

Eric Oyen (N7ZZT) you have a lot to answer for, because you continue attempting to
place the blame on others (by false accusation, obfuscation, inuendo and base turpitude). Your credibility as a ham (as well as a man) is so low that it cannot be measured.

> and has even gone so far as to disrespect those members of the SK ham community!

Exactly WHO have I EVER disrespected in the "SK ham community"?

Rick -
It is interesting that in Richard's writing to you he says,
"I will not tolerate the reckless and destructive behavior of people".
He continues to say, "I have and will continue to stand up and say so,
loudly. I urge you to do the same".

You have said so loudly that will not tolorate reckless and destructive
behavior as demonstrated by Richard Kendrick. Yet he is harassing
& condemming you and I for standing up for the very things he tells
us to which HE is committing.

Try attenuating the signal from the antenna. Use the minimum attenuation that prevents overload. A CATV splitter should give about 3dB of attenuation. Radio Shack sells a 6 dB attenuator (15-1257 or 15-1258) as well as a variable (15-578). Another possibility is to use a low pass filter to kill 800 MHz completely, but I do not know who sells such a device.

I doubt it's going to be anything like as expensive as has been bandied about here. There really isn't any reason, other than low volume production, why a police digital HT should cost much more than a digital cellphone. In fact, in a way, these things WILL be specialized digital cellphones.

Compatibility isn't much of an issue either. Different departments have always used different systems.

>It will be a LONG time until digital really takes off. By the time it

>almost *any* encrypted communications (remember, this stuff has to be
>encrypted in realtime, so the algorithms can never been all that
>complex),

Nonsense. First, you can do some fairly complex encryption in realtime, and second, you won't have the decryption key anyway.

>and nothing will have changed much. There will be software
>(some of it gray market or black market) to decrypt various encrypted
>systems which will be downloadable, just as there are scanners to
>decode trunked transmissions now. Hackers will be able to write such
>software far faster than police/fire departments can change to new
>systems, which will require quite a bit of time and money.

I'm sorry, but you really don't understand how encryption systems work. Having software that can do the decryption isn't enough. You still need the key. The key can be a fairly large number (64 bits? 128?) while still allowing real-time encrypt and decrypt; finding the key via exhaustive search will be impossible for all practical purposes. Finding the key via analysis of the encrypted data will likewise be difficult, and will take FAR longer than the time between key changes.

If the system vendors do an honest job on the encryption mechanism it will not be crackable in anything like realtime. It might be possible to do a "demo crack" using a very large number of computers working on the problem all at once, for a relatively long time, as has been done in the past --

but by the time the crack was done the subject department could have changed keys a hundred times.

Note that the ONLY reason CSS (the DVD content scrambling system) was cracked, and note that the decoding is done in real-time by the player hardware) is that one of the licensees left the decryption key "in clear" in one of their products. Had this mistake not been made, DeCSS, et al, wouldn't exist.

Changing keys does not involve "new systems", it only involves providing a new key to the system. Or pressing the "pick a new random key!" button. (The new key can be securely sent to the mobiles via a public-key cryptosystem.)

>Don't believe Uniden when they say they will never build a digital

> about here. There really isn't any reason, other than low volume
> production, why a police digital HT should cost much more than a digital
> cellphone. In fact, in a way, these things WILL be specialized digital
> cellphones.

You have obviously never seen a Motorola or Ericsson radio catalog! While the difference in real cost to the manufacturer between digital and digital with encryption is small, they charge HUGE amounts for options like that. A conventional handheld radio might cost about $1000 new in the box. A digital handheld might cost about $3000 new in the box. The encryption option could easily add up to $1000 on top of that. It shouldn't, but it does.

Radio Shack will still repair it, and various items are available for
purchase through radioshack.com online or through your local store.

> is it a good scanner to start off with until i can save money for
> a better one?

I have used one extensively in my car for 4-5 years and have been quite
pleased with it's performance. If you don't need trunking ability then you
should be pleased with it. I use it with a commercial dual band antenna and
it pulls in all the traffic, even 800 MHz. It does suffer from intermod
from VHF pagers, but a notch filter from PAR Electronics took care of that.
The filter runs about $60 from Grove Enterprises. I know, it's not cheap,
but you can use it on any radio for years to come.

> Would this be a good desktop scanner just to play around with?

Works pretty good on a 12 power supply.

> Thanks!

Know you asked how I could prove it. You asked Adam, I supplied you the
answer.

> A little touchy are we today?

No, what did I say or do to give you that idea. You asked how I could prove
it and then start this crap when I show you. Sounds like a JW to me.

> And for all you
> Mackey-haters out there, it's not that I dislike you (that's a whole
> different subject), I just wish you wouldn't waste everyone else's
bandwidth
> (on a SCANNER NG) complaining about one person.

Are you new or ignorant about USENET Adam? None of "your" bandwidth was
wasted until you entered into the conversation. If there were a possibility
of wasted bandwidth, check with John-Corky. He posts 2 replies by himself
for every one of his detractors. He has been "wasteing" bandwidth like this
for at least 5 maybe 6 years now. He holds the record of 400+ off topic
posts in a month on RRS. Your lack of knowledge is showing. WHat do you
expect from your type, though.

> As for you John Mackey,
> maybe you should do what they say and stop replying to all their foolish

How true... you know it's interesting how many people use their cell and cordless phones on a Friday evening. No, I would not be listening as that would be illegal, but while scanning for some FRS walkie talkies and baby monitors, I accidentally, "unintentionally" came across some interesting things. Same when I was using a Pro-34 is search mode on 400 mhz, all sorts of cell phone calls I unintentionally found... oh well, I guess until the goverment wakes up and realizes this is radio they are trying to regulate and that means they should require a license from cell phone users with them identifying themselves with a call sign every ten minutes of conversation, and perhaps label cordless and cell phones that they are transmission devices using radio waves and anything you say may be heard by someone else, people will be led by the government in a false sense of privacy (or should I say the reality is a total lack of!). Talk about misleading government actions... this was a good one, to make people think they can have privacy on their cell and cordless phones, ha ha ha!

Glenn,

I am not, I repeat, I am not a JW. Those people are weird! As for my experience on Usenet, you're right, I don't know squat. I'm here to talk about scanners. Somehow I got involved in a never-ending rivalry between you guys and Mackey. I do have to say that you are one of the more mature "immature" people on this NG. It's the ones like Cory who are total losers who are here just to make trouble. Hopefully all this squabbling will come to an end soon, it's just getting ridiculous.

When you were badgering Cheek for data about his degrees, you used every angle you could to embarrass and shame him into revealing the information. You trotted out your Amateur and commercial licenses proclaiming yourself superior because Cheek didn't have an equivalent. But, you failed to play the ultimate card and flaunt your alleged degrees. You couldn't play that card because your so called degree doesn't exist, except in your psychotic mind.

Now I give you another golden opportunity to trump me and even banish me from the scanner newsgroups and what do you do? You run from the chance like the coward that you are.

So why, when you are so hell bent on shaming your critics, do you run from the ultimate triumph? Hmmm, let's see:

A - You can't play the trump card because the degree doesn't exist, that you lied about its existence.

B - You don't care that you can't defend the accusation that you lied about your degrees because you want to keep the turbulence in the newsgroups aflame.

C - You've told the lie so long that you believe your own lies.

D - All the above.

Here's a hint, Toilet Boy: the answer is D, as in dolt, like you.

Just so you remember the original post, here, for your is the message in its entirety for your irritation.

Do you really want to know, Toilet Boy? You can buy the information, if you have the courage to face the truth.

Here's the deal: When you post the proof of your alleged degrees AND it's verified, I will post the information about my psychology degrees.

I'll even sweeten the deal. *After* your information is verified,
I'll post my data and then leave the scanner groups forever.

So what do you say, Toilet Boy? Are you man enough and honest enough
to accept this challenge?

Until then Toilet Boy, you are a liar and a fraud.

Cheeks totals were artifically inflated due to repostings from the
messages
you canceled. Not counting the repostings, his totals were in the low
one thousands. That makes you the most prolific poster of off topic
messages of the group.

> > You claimed WD-40 was unsuitable in an electronic application. You lied.
>
> Correct, & I still state the same. What is your point?

You hide the fact that Roy Lewallen, a Technical Advisor for the ARRL
endorsed the usage of WD-40 in electronic applications. Mr. Lewallen is
a Technical Advisor because he is qualified to make such advisements.
You're not a Technical Advisor and you're not even technically qualified
to change batteries in a flashlight, to your unqualified opinion is
useless and verifies your technical stupidity.

> > You claimed Bill Cheek had never been a member of Mensa. You lied.
>
> WRONG! I stated that Cheek was NOT a member of Mensa, I did not say
> that he had never been a member.

Sure you did. If you want proof, find someone to show it to you in
DejaNews. Otherwise, go urinate into the wind.

Actually, you proved it for me: that you're stupid and your mental
illness exacerbates your denial and you can't remember anything that
causes you to face the truth about yourself. Let me remind you:
John Mackey, you are a liar and a fraud.

> > To your dimwitted friend Larry Johnson, two things:

I already did, but your mental illness prohibits you from remembering.

I've never claimed to have killfilters enabled. Have you been sampling
Toilet Boy's expired medication again?

> This is an example of his perverted style of self righteousness.

How odd, a Mackey Lackey actually quotes something verbatim and didn't
employ their standard revisionist tactics. Better watch out, you'll
annoy your hero Toilet Boy and fall from grace.

I'm not surprised that you find my position 'perverted.' I'd bet if
this was Nazi Germany, and you were watching the facists arrest your
neighbors in the middle of the night, you'd do nothing. I'd also bet
that when they finally come for you, you'd whine like the coward
Mackey does when someone gives him a dose of his own medicine as
forcefully as he spews his bile.

I live in the South Alabama area and have been logging alot of channels in the 163-170 and 406-420 MHz bands. I've logged about 30 or so frequencies today. Is there anyway to tell what agency the frequency belongs to? Or what other related frequencies might be in my area that I am missing? Thanks in advance.

Make a list. The back of "Police Call" (available at all Rad Shacks) has some blank number-lined pages you can copy and fill in the freq/user & notes.

After a while you'll recognize the frequency numbers on sight. Just takes time.

Also, after a while, just by listening to codes, UNIT NUMBERS ESPECIALLY, and locations, you'll know hwo you're hearing.

Like everything...time and practice. Have fun (I've been listening for nearly 40 years...even when I was dispatching I'd turn on my car scanner on my way home half the time!)

> stories they're also covering.

First off a real reciever, antenna and various cables will start around $15,000. You would need to mount the antenna outside the aircraft.

But the whole thing is not realistic for watching feeds and liveshots from the trucks. The 2 gigahertz and sometimes 6ghz signals are fed to receive sites on the ground and are very directional. The feed from the chopper can be omni or directional (some airships have both) but since a fixed wing plane would be above the chopper the chances of grabbing any type of patchable signal would be slim.

Now if you wanted to watch the in-car race cameras with a 2ghz receiver you would have a much better chance since those antennas point *up* to a fixed wing plane and are bounced back to the ground receivers.

If you expect any kind of success you will need a good 2ghz omni antenna mounted outside the aircraft.

Markj

Adam, you need a dose of reality then. Maybe you are mistaken. Mackey talks a good line, for about 20 daily posts. Do dejanews. see the truth about Sociopath John-Corky. Here I''ll give you a start for the last couple of months posted by another user. You will also notice John-Corky or his rear driver RicK seem to ignore the facts. You tell me Adam why John-Corky would do the following name changes if he wasn't trying to get on peoples nerves.

RicK-Corky You must be Mackey-bowl or you are his clone. I knew you were to much like John-corky. Little girl RicK could take the challenge. HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!

Oh yeah, I never have made any effort to say I have accomplished anything. I still know its more than you RicK. You ran from the challenge and them like a good little monkey stand on your organ grinders shoulder and yack like John-corky.

Run RicKy-Corky Run

Dummy
Maybe PARGRADIO and PARG are two different groups.
Seems that young Ryan from MINN or Bowers said that it was PottersvilleARG
or something.
Better check you facts before you holler fraud.

RicK Larson mustering up all his brain power spewed barely
coherrent.........

> Duh,

Only you RicK-Corky could be made to look brighter with that utterance. You
are John-Corky's equal!

> I guess that he has yanked yer crank plenty.

No, and the reality is I doubt he got to many if any. He isn't bright enough
to realize it nor do you seem to be. He did send me E-mail once admitting I
had made him "so mad" with my "smart assed remarks". The guy all but tear
stained my monitor.

Now scurry along RicK, go give John-Corky one of your 'special' hugs!

Glenn

Hi..
I've got an old Bearcat 200XLT that I run into the audio-in jack on my SBLive! audio card..I then run RealProducer and RealServer under Linux and via my cable modem am able to
tune into my Fire Department's live broadcasts (with any RealAudio player) anywhere in the world..
Loads of fun..

Jim

Hi, Chuck,

This sounds like a neat project, and I would hate to rain on your parade, but I'd like to bring two issues to your attention.

First, and least important, news gathering frequencies have the same status under the law as do cell phone conversations. 'Nuff said.

Second, and more important, if you have the chance to check out the antenna used by the helo, make sure that it is not highly directional, or else you actually will have a line-of-sight problem. If it is a single whip element, things are good. But if it's a beam-type, or reflector-type, it would have to be pointed right at you to be viewable.

Good signals!

Oh ya, I'm loony alright. I joined rec.aviation.misc, saw a posting from Bill Mulcahy (didn't know he was loony), and agreed with it. Then all sorts of people started flaming me, and I had no idea why. Then, in reply to someone's fear of dying, I posted some verses from the Bible. That got some people's dandruff in an uproar. Oh boy, am I ever loony. And by the way, "abc", there are no postings from (or about) me on rec.aviation.misc right now, so what good would it be for someone to "check out rec.aviation.misc"?

Message-ID: <8njvt5$2v5m$1@newssvr05-en0.news.prodigy.com>
Source record: 81828

Not only Uniden, but most other manufacturs as well. You should assume,
that if you modify a radio, you void your warranty.

! =-----

3865. Re: Baseband Output On Uniden Scanner

Newsgroup: rec.radio.scanner
Date: 2000-08-18 00:00:00 UTC
From: James Shelton <JShelton1@prodigy.net>
Message-ID: <8nk04l$2tvq$1@newssvr05-en0.news.prodigy.com>

It's not only UNIDEN. Many manufacturs will not honor the warraanty if a
radio has been modified. It is wise to assume that whatever modification
youmake to any radio will void the warranty.

No, it isn't stupid. Follow what I'm saying...
Just because someone tells you that something is illegal to have,
or that you can't, or shouldn't have something, doesn't mean you can't
have it or obtain it. If you get caught you might get in trouble, but if you are willing
to pay the consequences of going against policy and law, then you can have and do whatever
you want..

3867. [FA] Pro-39 Realistic Hyperscan

Newsgroup: rec.radio.scanner

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=412417178

This is a Radio Shack Realistic Pro-39 Hyperscan 200 channel direct entry handheld programmable scanner.
Frequency ranges are as follows: 30-54MHz, 108-136.975MHz, 137-174MHz, 380-512MHz,
806-823.9375MHz, 851-868.9375MHz, 896-960MHz. It is in terrific shape and works perfectly. Comes
with the Owner's Manual. I used this scanner very sporadically, so it has very little wear and tear. Date model
10a3, model no. 20-303 -- which means, if want to violate certain FCC "regulations," all you need is a
screwdriver and a soldering kit. Never opened it up or took it in for repair myself. Features include:
Hyperscan- search through frequencies at up to 50 steps per sec.; scan stored channels at up to 25/sec -
Channel storage banks - 10 of them: organize your saved frequencies to quickly tune in! Very convenient. -
Monitor banks (save up to 10 channels located in a search) - Scan delay of 2 seconds - don't miss replies while
you are scanning through the channels. For full details on this item, please consult the link for the Pro-39 at
http://www.radioshack.com/ProductSupport/DrillDown/1,2358,RSSupport Communications,00.html# NO
RESERVE! Buyer pays $3.00 shipping and handling. Item will be shipped safe and fast via. UPS with a tracking
number. Pay by Billpoint or PayPal, and order ships immediately. Money Orders ship upon receipt. Personal
checks must clear first. Please feel free to e-mail me with any questions or concerns regarding this item.
Thanks!

OK relax Glenn! I wasn't trying to put anyone down, I was only asking how you knew that was Mackey. A little touchy are we today? And for all you Mackey-haters out there, it's not that I dislike you (that's a whole different subject), I just wish you wouldn't waste everyone else's bandwidth (on a SCANNER NG) complaining about one person. As for you John Mackey, maybe you should do what they say and stop replying to all their foolish posts. That way, if the harassment continues, you can report them or whatever. We both know who the cooler heads are in this NG.

I am planning on a photo run of the UP Challenger steam locomotive (UP #3985) on it's return trip from L.A. where it has been at Union Station during the Democratic National Convention. I have the tenative schedule from the UPRR website and I have some UPRR road freqs, but does anyone know for sure what radio frequencies to monitor to track it's progress (starting from LA and thru San Bernardino and up the Cajon Pass)? Did anyone chase it when it came into So California last week and know for sure what freqs were used?? Any help so i can narrow down the freqs to monitor is appreciated.

Mike

Should be the standard railroad frequencies for the region... They'll have
to co:ordinate it's movement with all the rest of the trains.

Help me please

I need WiNRADiO WorldStation Database Manager software because the disk I have has goten damaged and winradio or the dealer I bought it from will not replace it. The stupid part is it that comes on a 3.5 disk, not a cd, so I didnt think to back it up on to another disk.

I have been searching all over for this program with no luck. If you can help me out, it would be sincerely appreciated.

Thank you for your help in advance!

Back during the height of the Gulf War I was commuting on a regular basis to my job and saw something that really told me how sensitive those metal detectors were. A lady in front of me went through twice with the detector still tripping. She was carrying one last thing that I never thought would trip it and that was a fresh cup of coffee in a ceramic mug. Turning that over to security and passing through again she had no problem. Must have been conductive ceramic!

It must have been some sort of conductive ceramic I suppose

I have a sportcat (sc150b) that i use to track down ELT signals with, I have the stock antenna on it.

What would be a good antenna I could use to get the most range on 121.5mhz.

thank you

Hi All,

My radio website, http://swlinks.webalias.com has prerecorded scanner audio (both trunked and non-trunked) available for listening (realaudio format). Also shortwave (HF) audio. Go to http://swlinks.webalias.com, scroll down to "Special Features" and click on "The Listening Post."

Enjoy,

Tim

Newbie, or evidently John, why would you want to post this in the firefighter newsgroup?

All you need to do is send me email, and I will tell you what Fire Department I am the Assistant Chief of, as well as a board member.

Heck, even better yet, look for my web page about it. Tells all about it.

But they will recognize the rantings of an idiot, and ignore you John.

There is another issue for you to consider.
In April of 1998, the FAA issued changes to the F.A.R.'s
(Flight Aviation Rules) soecifically rohibiting the use of any
electrnic device not relevant to the operations of a commercial
flight (this means: no cell phones, no scanners, no radio receivers
or any kind, no cd platers and no hand-held ham radios, PERIOD).

So far as I know, these rules have not been amended or revoked.
The pilot (or aircraft staff) are empowered to enforce these F.A.R.'s
even to the point of confiscation of the equipment and forceable
detainer of the person for arrest at the destination (charged with
endangerment and hazzard to flight operations).

So, if you want to use any of the "prohibited devices" on board
a commercial flight, be prepared to pay heavy.

Here's the current (as of Jan 1, 2000) FAR:

[Code of Federal Regulations]
[Title 14, Volume 2, Parts 60 to 139]
[Revised as of January 1, 2000]
From the U.S. Government Printing Office via GPO Access
[CITE: 14CFR91.21]

[Page 193-194]

TITLE 14--AERONAUTICS AND SPACE

PART 91--GENERAL OPERATING AND FLIGHT RULES--Table of Contents

Subpart A--General

Sec. 91.21 Portable electronic devices.

(a) Except as provided in paragraph (b) of this section, no person
may operate, nor may any operator or pilot in command of an aircraft
allow the operation of, any portable electronic device on any of the
following U.S.-registered civil aircraft:

(1) Aircraft operated by a holder of an air carrier operating
certificate or an operating certificate; or
(2) Any other aircraft while it is operated under IFR.
(b) Paragraph (a) of this section does not apply to--
(1) Portable voice recorders;
(2) Hearing aids;

(3) Heart pacemakers;
(4) Electric shavers; or
(5) Any other portable electronic device that the operator of the aircraft has determined will not cause interference with the navigation or communication system of the aircraft on which it is to be used.
(c) In the case of an aircraft operated by a holder of an air carrier operating certificate or an operating certificate, the determination required by paragraph (b)(5) of this section shall be made by that operator of the aircraft on which the particular device is to be used. In the case of other aircraft, the determination may be made by the pilot in command or other operator of the aircraft.

Bill,
You are right though. some carriers are more strict than others.
However: read on....

I have been on many flights over the last 4 years (visiting family, etc)
and was instructed shortly after I produced the scanner, HT, etc to
turn off the equipment (as such was not allowed to be used during
flight). The carrier you use may also have an impact on the level of
enforcement.

It is my understanding, based on experience, as well as inquiries
with local officials of the FAA (My next door neighbor works at
sky harbor FAA Operations), that prohibited devices are strictly that:
PROHIBITED (because they produce rf energy that may interfere with
onboard navigational equipment). According to the FAA, such devices
have an inherent chance of endangerment to the other passengers
and crew of the aircraft. As such, this means they take great pains
to minimize such chances.

Personally, if someone decided to start using a cell phone on a plane
I was traveling on, I would politely ask them to cease using the device.
If they continued, I'd take the matter up with the flight crew.
So,whenever
I bring such devices on board, I usually ask first. usually, I have been
told no, and given the reasons (the F.A.R.'s). thats all thats needed.

Video is not all the same.

If ICOM's piece will receive broadcast television images, it is
demodulating AM video.

Only broadcast, some amateur and inexpensive commercial video
transmitters on lower frequencies use AM for video. All the rest are
FM. Different breed of cat.

See if the thing will demodulate the signal from an inexpensive
Wavecom or equivalent 2.4 gig video transmitter. That represents 90%
of the surveillance video out there.

For those of you who missed the first post a few days ago, I've got a Uniden Bearcat 200XLT for sale. This scanner has had the cell modification, the light switch modification, and the double-speed scan mod done. You can check it out on Ebay at:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=410667874

Thanks!
Ryan

John, how can you lie like this? You sent me profanity
in the last few days! It is a matter of record!

Durn boy! You seem to be making it easier to catch you
in the lies daily!

3959. 1300mhz and up?

Newsgroup: rec.radio.scanner
Date: 2000-08-19 00:00:00 UTC
From: Sarge <Bearcat@cloudnet.com>
Message-ID: <399EF6BC.BFA1E9A7@cloudnet.com>
Source record: 81672

Has anyone ever picked up anything above 1300 mhz besides birdies from lower freqs? Is there a place that shows specific freqs above 1300 actually being assigned? The reason I am asking is to see if its practical to buy a scanner that goes up to 2000 mhz. I have a pro 26 that goes up to 1.3 gig and have never picked up anything above 1000 mhz. I am sure there are government agencies that go well above this but they are encrypted so we cannot listen to them anyway.
Any comments would be appreciated.
thanks
Randy

Looking for any frequency info for the Medivac Helicopter Program out of Temple TX run by Scott & White Hospital. They now have a helicopter based in Taylor TX and I'm looking for Frequencies they use to communicate to their dispatcher. Yes I am already familiar that they use intercity 154.95 and can be linked to Williamson County SO's Trunked System but I'm looking for communication between their dispatcher and the Medivac.

In Austin, TX Austin EMS now can talk to all aero helicopters on 122.850 to coordinate landing at Brackenridge Hospital

You're mistaken about this. I've been a VERY frequent flyer for the last six years or so and I know of no U.S. carriers that ever prohibited CD players or laptop computers. A few even allow scanners and AM/FM radios. When above 10,000 feet, of course. Perhaps you're thinking of the "below 10,000 feet" rule.

Mike,

If you haven't already done so, I highly recommend that you download for reference the monthly postings by Bob Parnass. They're a goldmine of scanner reference information. From his 8/15/00 posting of "FAQ - Scanner Radio Review Briefs":

"PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob.
200 channels, global delay. Scans and searches fast.
Count, AUX, and Auto Store features. Accepts optional CTCSS
board. Dual conversion with 10.8 MHz and 450 kHz IFs --
lots of images and birdies. Prone to severe intermod,
especially when used with an outdoor antenna. See "The
Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass,
in June 1995 Monitoring Times."

Good signals,
Charley_Harp@alum.calberkeley.org

Source record: 81699

I just picked up an excellent condition PRO-43 but find the small keypad hard to use. I saw a brand new Sony SC1 handheld scanner for $179.00 and am wondering if I should sell the PRO-43 to get the SC1. What do you think?

Frank

3987. RS Pro-2006 FS

Newsgroup: rec.radio.scanner
Date: 2000-08-19 00:00:00 UTC
From: moonman <moonman@telcomplus.net>
Message-ID: <399EE5EF.9309EE9D@telcomplus.net>
Source record: 81700

I have a Radio Shack Pro 2006 that I bought new in 1995 it has a date
code of 1A4 and is in perfect cond.
The reason that i am selling is I just don't use it enough, any way here
is what is in the package:
The Radio has the following modifications.
Digital S-Meter / with front panel LED's
Analog S-Meter with jack
Data Tone Squelch mod. { switchable }
Extended delay, Adjustable 0-12 sec with front panel Led On Indicator
Carrier Status "Led" front panel mount
Center tune indicator "Led front panel mount"
Cell Mod
Diode speed up mod
10 Mhz Reference Mod with Bnc jack
8 Unused front panel mounted LED's for future mods
6,400 channel Mod. (Computer Controlled Only)
2 DB25 jacks mounted in rear.
2 25 cond. cables for Interface
1 9 Cond. Cable for interface
1 CE-232 Interface. Built externally in a very nice looking project box
with a led on indicator, two DB 25
jacks to interface with the Scanner, 1 DB9 Jack for Comm. port
connection to computer.
I Have all Original Documentation an As-Built diagrams of the
Interconnection between the scanner and
CE-232. The Analog to Digital conversion has been enabled and works
Perfectly. The Ce-232
Documentation and installation and Operation software will come in a
nice binded folder exactly the way I
Received it from Commtronics Engineering (Bill Cheek) With the
addition of all AS-Built diagrams that I
have done.
I have been using a Windows program "Pro Turbo" with this scanner and it
is quite impressive. I think that
there is another windows based program called "Red shift" But I cant
comment on that one.
This Scanner and Interface are in Absolutely Mint- Cond. Electrically
and Cosmetically. I also have Full
Copies of Bill Cheeks World Scanner Reports from Jan 1991 to July 1996
That I will throw in with the deal. I also have a new spare EL Panel
that will go with the radio.
I want $500.00 Dollars plus UPS Ground shipping (I will properly pack
it) If you need some specific
information on the capabilities of this interface you can visit these

sites.
Thanks,
Craig

3989. WTB Handheld Scanner

Newsgroup: rec.radio.scanner
Date: 2000-08-19 00:00:00 UTC
From: Don <ve6ci@telusplanet.net>
Message-ID: <399EE783.3FFB2ABB@telusplanet.net>
Source record: 81702

I am looking for a friend of mine a reasonably priced handheld scanner
in nice shape for police, fire etc.

Please email direct ve6ci@rac.ca

3990. Re: 1300mhz and up?

Newsgroup: rec.radio.scanner
Date: 2000-08-19 00:00:00 UTC
From: Ash <ash@gravitywell.org>
Message-ID: <399EEB92.E5DA57ED@gravitywell.org>
Source record: 81703

-1,325----(1.325 GHz)-----------
Mobile, Satellite, Fixed, Navigation etc...

Rather specialist, wavelengths of less than 30cm really do allow
for high gain antennas, with very narrow beamwidths. Cable losses
become very noticeable and/or untenable. Mobile "flutter" quite
severe, mobile systems need many more base stations to cover a given
area. Most useful uses are direct fixed links, point to point,
satellite
(line of sight), low range etc.
So - mostly un-interceptable and/or digital.

1,400... Transmission Prohibited, to 1427
Astronomy, Space Research, SETI, Hydrogen Line. Certain frequencies
around here
propagate very well through the universe, so the boffins listen here
for extra-
terrestial transmissions. But surely the little grey men are doing the
same thing?
1,452... L-Band DAB, to 1492
1,525... Satellite comms downlinks, to 1559 Inmarsat GMDSS etc (uplinks
1626.5-1660.5) (+101.5?)
1,575.42 Navstar GPS Nav L1 C/A (military accuracy with 1227.6 L2) (L3 1381.05
used)
1,602... Russian GLONASS L1, 0-12: 1602+n(0.5625) spread spectrum
1,610... LEO MSS, to 1626.5 (up&down) CDMA i.e. Globalstar, Iridium (TDMA,
780km up)
1,800.30.TFTS in-flight digital phones (air-ground), to 1804.969 (164 x 30.303
kHz channels : ground at -130)
1,690... Weather Satellite HRPT (Hi-res pics), to 1710 NOAA, GOES, MeteoSat
1,805... PCN mobile phones, to 1876.5 (split -95: 1710..)
1805 - 1816.5 soon to be shared by Cellnet & Vodaphone
1816.5 - 1846.5 One 2 One
1846.5 - 1876.5 Orange

1,880... DECT Digital Euro. Cordless Telephones, to 1900
1,900... future UMTS, to 2025 (with 2110-2200) IMT-2000, FPLMTS 3rd generation
mobile (-190?)

There are also some more on http://w1.647.telia.com/~u64702927/sk77goj.htm but
it wouldn't cut and paste correct...

>When above 10,000 feet, of course. Perhaps you're thinking of the "below
>10,000 feet" rule.

Oh... but of course none allow things that are "transmitters by design":
Cell phones, HTs of any band, remote-controlled toys, etc., at any
altitude.

Even this however is not due to the FAA's rule; the FAA (as quoted by
Skip) leaves it up to the "operator" (the airline) to allow "any other
portable electronic device that the operator of the aircraft has
determined will not cause interference with the navigation or
communication system of the aircraft on which it is to be used."

So if an airline did determine that, say, a 2m HT wouldn't bother the
aircraft, the airline would be free to allow its use. Just as some have
said that VHF scanners are just fine and dandy.

Cellphones are a special case. Cellphone use aboard *all* aircraft, even
private a/c, is prohibited by FCC regs, for technical reasons that have
been discussed at length here already.

>
> Cheeks totals were artifically inflated due to repostings from the
> messages you canceled. Not counting the repostings, his totals were in the
low

I have NEVER canceled posting from anyone other than myself. If you still
wish to
push this then post your verifiable proof or be found a liar by default.

If Cheek is given credit for his posting being artifically inflated then I
also deserve
the same credit as several of my messages were canceled & had to be
re-posted
dureing that same time. Therefore, with me receiving the credit as Cheek,
I would
still result with better ranking numbers to prove Cheek (NOT ME) was the
most
prolific poster.

> > WRONG! I stated that Cheek was NOT a member of Mensa, I did not say
> > that he had never been a member.

>
> Sure you did. If you want proof, find someone to show it to you in
SNIP

Show it yourself within 48 hours or be found to be a liar by default.

Well BTH......bullshit back to you.......that portion of the law was not changed to give the police a tool for the "war against drugs". That was the whole basis of the Supreme Court decision. A man was convicted on drug charges because a neighbor heard the dealer making drug deals on his scanner. The neighbor called police who in turn set up a "listing post" and subsequently the drug dealer was arrested, tried, and convicted. It is not illegal to listen to the type of phones and monitors we are discussing. Recently, while on a "stakeout" in a grave yard, in my area, an undercover agent, using a bearcat 200xlt scanner and recorder busted a high-school drug ring. The dealer was using the city and county grave yards to make drops at certain grave sites. He would tell the buyer to look for the site and a prescription bottle. The buyer would take the drugs and leave money or pay in advance. The undercover agent used the tapes he made, of the phone calls, from the buyers in the area during the court case. The case was won. The police and agents will use the means necessary to stop drug dealers. If you disagree that is ok but be civil......I bet you are the same BTR found in the "bible groups"?

Harry Marnell has sent you the following comments and article from
http://www.marinij.com

Comments: Now THIS is what we need more of. Notice Capt. Lyles' referring to the scanner listener as "a great citizen" and "solid." And apparently the citizen reported what he saw but left the work to the police. One for our side.

Robbery could lead to life terms

By Con Garretson

The two suspects in dramatic robbery of an Old Navy clothing store in Novato have extensive criminal histories and could be sentenced to life in prison if convicted on new criminal charges filed yesterday, prosecutors said.

Sharon Brewer, 40, and Edward Jerome Jones, 45, both of Oakland, were arrested at gunpoint on the side of southbound Highway 101 after taking $682 worth of merchandise from the clothing store in the Vintage Oaks shopping center, authorities said.

Bewer and Jones have two prior felony convictions that count as "strikes" under California's "three strikes" sentencing law. As a result, convictions in this new case could result in sentences of at least 25 years to life, according to Marin County Deputy District Attorney Linda Witong.

Brewer was arraigned in Marin County Superior Court yesterday on charges of robbery, commercial burglary, grand theft and additional legal enhancements based on her criminal history, including convictions for grand theft, attempted robbery and robbery using a gun in the early 1980s.

Witong said Brewer also is on felony probation for a theft conviction in February and a conviction on the robbery charge could result in a 30 years-to-life sentence for her.

Jones was arraigned in court on charges of commercial burglary and grand theft, as well as additional criminal enhancements for a criminal career that includes three bank robbery convictions in the 1970s and 1980s.

All of their prior convictions took place in the Bay Area, Witong said, but none of them were in Marin.

Witong said bail was increased to $650,000 for both, from $50,000 for Brewer and $300,000 for Jones.

Police said the two suspects placed several shirts in a shopping bag and tried to leave the store without paying for the merchandise at about 3:40

p.m. An employee confronted the pair, a scuffle broke out and the suspects fled and jumped into an older model yellow Mercedes, witnesses told police.

A tip from an alert citizen led to their capture.

"We had a great citizen who helped us out," Novato police Capt. Reggie Lyles said. "This guy was in his car listening to his (police) scanner and he observed the car. He got on his cell phone and told us our suspects were headed southbound on Highway 101."

"We were really blessed that he did that. It just speaks to why our community is so safe, because we have such solid people like him out there."

Lyles said his officers have been "especially sensitive" of potential crime activity at Old Navy in light of at least half a dozen thefts there in the past four months.

Three weeks prior to the arrest of Brewer and Jones, another person was arrested in her car with merchandise stolen from the same Old Navy.

Eboni Camille Thomas, 23, also of Oakland, was charged yesterday with grand theft in that case, Witong said.

Thomas was arrested on July 26 on suspicion of grand theft. Another woman driving her car pulled into the path of another car on Rowland Boulevard, resulting in a minor injury collision, police said.

Witnesses told police Thomas was seen running out of Old Navy with 36 shirts, which were later valued at $764. The shirts were found inside the would-be getaway car but there were initially problems establishing a criminal case against Thomas, police said.

However, Witong said further investigation revealed sufficient evidence to charge Thomas with felony grand theft. Thomas has been out of jail on $10,000 bail since the day after her arrest.

After Thomas' arrest, an Old Navy employee said the recent crime spree at the store was not coincidental but was tied to a "huge (crime) ring" targeting the Novato outlet based on knowledge of that store's security practices and the retail chain's merchandise return policy.

Doesn't work that way loony. Richard says he has a psych degree. He can continue to make that claim right up to, during, and after he displays his credentials. It's only in your LIE infested world that everyone has to present papers in order to identify one's self. You're projecting.

But Richard says he'll gladly show you his degree......

>>>>Here's the deal: When you post the proof of your alleged degrees AND it's verified, I will post the information about my psychology degrees.

>>>>>>I'll even sweeten the deal. *After* your information is verified, I'll post my data and then leave the scanner groups forever.

: or any kind, no cd platers and no hand-held ham radios, PERIOD).

Funny. When I flew back East this last fall, they had no problem
with scanners, radio receivers and televisions. We just had to
wait until we were out of the departure traffic area and stabilized
on a climb to cruise altitude. We had to shut them off when on
descent to the landing pattern.

What is allowed is up to the pilot, by regulation, but actually
decided by the airline. Some are more strict than others.

Well Scott you could use several types of antennas. One would be a 5/8ths wave telescoping antenna for use in the home or just walking around the neighbor. At home you could use TV rabbit ears, (replace the TV wire with coax cable) , or make a vertical ground (VGA)plane antenna. The plans for the VGA can be found in any antenna book. I have been scanning for 30 years and hamming for 13 years and have built most of my own antennas for scanning and hamming. I have tried antennas of all kinds and find nothing can beat the homemade ones. Especially the VGA. If you live near a city or in the city the VGA can be placed on top of any building or if codes will not allow antennas you can hide them in your attack. Or build a fake chimney and put your antenna inside it. To my amazement I have found that any metal attached to my scanners will "hear" the signals. I have used a paper clip and compared it to a rubber ducky and my VGA. For city and county listing the paper clip did as good a job as the VGA. For distance listing the higher your antenna the better it will hear. You can also use old TV antennas turned in a vertical position rather than the horizontal way we all see them. A 400Mhz and up antenna can be found at the TV antenna shop. It is the V shaped looking one. Again mount the antenna as high as possible and also in the vertical position, that is with the elements pointing toward the sky and ground. For mobile you can use a magmount or trunk lid (check your scanner laws. Some states have laws against carrying a scanner in your car unless you have one of the many licenses available to carry the scanner.) Experiment and have fun. Once you catch the "roll your own antennas" fever you will never buy a commercial one again. Unless it claims to "hear" God.....Good luck and have fun.....N9IPA

According the Supreme Court it is not illegal to listen to home portable phones. I do not have the case number but it can be found in the public library. It is illegal to make tape copies of the calls. The Supreme Court ruled during a "drug bust trial" that "home portable phones, baby monitors, and other types of home monitors are "radios" because they transmit a signal in the "air". Now is that something? What is a cell phone? According to the cell phone industry a cell phone is radio transmitter and as we all know a "radio direction finder" for the cops and your roam features. So hows come it illegal to "listen" cell (radios) phones? How do you spell money?

Sorry, no. The pilot is NOT allowed to decide this by the FAA, on
commercial flights. The AIRLINE (The 'operator', to the FAA must make that
decision. They could, of course, delegate that power to the PIC, but the
Operator must make the decision. By regulation, the PIC does not have the
right to decide this themselves. (private pilots do, not commercial pilots.)

Hello,
Could someone out there find me the frequency for Brown County General Hospital in Georgetown Ohio? I have been trying to listen to the ambulance transmissions to their hospital on 155.340, and 155.280 but have not been able to pick up any!

Thanks!

> Anybody have a Pro-2067?

I do...

>What do you think of it?

Love it. Use it for conventional scanning and the excellent PL/DPL feature. It finds and displays the PL on a frequency in one second flat. Very nice radio!

> I'm debating whether to get one or wait for the BC-780.

It's been delayed since July. Then they pushed it back to August, September and now November! I don't think it will be out this year. Get the 2067!

Roland

For some reason, I keep getting error messages in that database. Could it be that they have switched to an "unpublished" frequency?

Thanks!

Those are the correct frequencies for georgetown. you might want to check your system to make sure it is working properly or ask them at the hospital and at the ambulance service to make sure of the frequencies. 155.340 is Ohio's state wide hospital link frequency. 155.280 and 155.295 are normal ambulance frequencies found in Ohio.

Yes, you did cancel a few of your own posts to deflect attention from
you,
but the tactic failed. Even if the few posts of yours that were
reposted,
it would still show you as the most prolific poster.

> > > WRONG! I stated that Cheek was NOT a member of Mensa, I did not say

I'll say what I want to about my degrees and there isn't a bloody
thing you can do about it.

You're still avoiding the main point, Toilet Boy. I'm your harshest
critic and you have the means at your fingertips to silence my voice
about you forever. Yet, you run like the scared coward that you are
from the chance. You lie to the people on the Internet about yourself
and you lie to yourself about you. That's why you run from this
golden opportunity and want to deflect attention from the fact that
you don't have the degrees you claim and you can't face the lies
about yourself. You avoid this because you are a coward and can't
face yourself.

Here are the terms again, just in case you develop the intestinal
fortitude to face yourself. So, show us, Toilet Boy, are you man
enough to face yourself?

Here's the deal: When you post the proof of your alleged degrees
AND it's verified, I will post the information about my psychology
degrees.

I'll even sweeten the deal. *After* your information is verified,
I'll post my data and then leave the scanner groups forever.

K-S-0-F (call me John-Corky) said over the din of rattling bedpans ...

> Glenn, get a life & get real.

I have a life John-Corky, unlike you who spends most his time (6 years)
posting offtopic nonsense, 45 today alone. As far as getting real
John-Corky, let's take a quick look at reality. You snipped it, read on.

> "Glenn" <glenn.hansen@usa.net> wrote
> stupidity snipped

"stupidity snipped". Good old John-corky the Denial Snipper. What are you
hiding today.

John-Corky snipped in an attempt to hide reality.......

">Right John-Corky, 23 people have been lying for over 6 years and only
>John-Corky has told the truth. You are a liar, a fraud and in denial
>John-Corky. Seek professional help again."

I got real and you couldn't face it so you snip it in you permanent state of
denial John-Corky. It is so cute the way you un to respond to every message
sent to John-Corky, Corky-John, ToiletBoy and others. Why not use John-Corky
as your header name? You answer to John-Corky like a good boy!
Get help, it might not be too late John-Corky!

Glenn

Sounds like somebody who's upset because they couldn't pass a test upgrade so he's stringing about some sour grapes.

One thing's for sure, if the number of people dwindle, it will be a fact thrown right in the face of the p.c.t (pro-code test) crowd that has been hollering that the bands will just fill to the brim with low-class people. It's funny how everybody who has a view or an angle on the hobby casts predictions to support THIER belief, and it generally conflicst with not only other's of the same sort of negative tripe but often has no basis on reality OR in current market trends.

Go back to your t.v. and turn on your sony playstation. Make the little man jump over the cute little flying boxes.

In the state of Indiana only one person has to "ok" the monitoring of
"portable phone calls". Cell phones are not included unless there is a wire
tap authorized. I stand corrected. I was not aware of the "new laws" of
1994. In the case I was involved in one person did ok the taping of calls
to protect their children. Sorry for my ignorance. Lawyers wrote these laws
with little loop holes in them. It is my understanding some lawyer out there
is trying to figure out what actually is a sex act and what the word "is"
is.

Hi:

I was wondering if anyone knows what the laws are concerning reporting possible criminal activity that you may hear on cordless phones.

If you hear potential criminal activity, can you get in trouble for reporting it? Can the Police make an investigation based upon your report?

Thanks,

Mike

I don't think that its the case. What he stated are pretty much facts
that have nothing whatsoever to do with the "P.C.T.". I hear this from all
over the hobby, pro and anti-cw. Fact is, for years you could enjoy hf with
a 5 wpm cw test. It hasn't saved the hobby. Don't get me wrong, I have
supported a lowering of the cw requirements to spur some growth, but there
are too many other factors that will contribute to the "death" (whatever
that may be) of ham radio.
Anyways, for a simple written exam and a relatively easy 5 wpm cw exam,
anyone can enjoy most or all hf priveleges now. If ham radio dies at this
point, the P.C.T. crowd is not to blame, the blame I think should rest on
all of us for not promoting the hobby more.

4076. CONSUMER ALERT - Beware of Eucalypt Software - Makers of Autopost & Rocketfuel!!!

Newsgroup: rec.radio.scanner
Date: 2000-08-20 00:00:00 UTC
From: Warning-Warning@kmeujvxajy.net
Message-ID: <2076B180880CE62.esbw@ohtenllfw.edu>
Source record: 81604

Eucalypt Software - Makers of Autopost & Rocketfuel --- Ripped Me Off!!!
-
All potential buyers should be warned to steer clear of this company. They have a repeated pattern
of ripping people off and ignoring requests for support.
-
I know someone who sent in the $10 registration fee for Autopost TWICE (thinking the first one may
have gotten lost) and in both instances, never got a registered version of the program and all of his
emails were completely ignored.
-
I myself purchased Rocketfuel on-line and had to pull teeth to get an unlock code. The web site was very
quick to take my money, but no registration/unlock code came for days and days. I repeatedly emailed them,
only to receive nothing but autoresponses. After 5 days I sent them a message stating that if I did not have
a working version of the program by the close of business that day, that I would challenge the credit card
charge. Magically, the code arrived several hours later.
-
What kind of way to do business is that?
-
In any case, its academic... there are other products available for free that do virtually the same thing
and I only wish that I had known about them before I wasted my time with Eucalypt Software.
-
If your in need of automatic news posting software, there is nothing better than "NNTP Power Post 2000".
It's graciously been made available free from the following web site:
-
http://net-toys.8k.com/
-
Save your money... your time... and the aggravation!
-
Peace,
-
PPN
-
-
PS: I have no affiliation with the makers of PowerPost 2000.
-

>Hamfests: Attendance is way down across the board. Dayton down by 3000

This is true, but don't rejoice, it is indicative of all radio related hobbies, including scanners!

>Radios: Still way overpriced for what is inside. Dealers crying the blues
>Inventory not moving, esp HF rigs. Who in his right mind would spend
>$1500.00 (or more) for a HF ham radio, which inside is put together no better
>than a $85.00 Korean VCR? Put that cash towards a new car or a vacation
>in Europe.

You forget one thing: economies of scale! If manufacturers of ham equipment sold as many rigs as they did VCRs, then the price would come way down-it's basic economics.

> Hobby: Dying on the vine. Literally! SK in QST is up to 1.5 pages per
> month. No new people (young people - meaning the target market of
>youthful white males) coming into the hobby. Who wants to bother
>stringing up antennas, learning stupid Morse code and paying average
>of $1100-1700 for HF gear - just to talk to a bunch of old men??

Morse code is now limited to 5 wpm which you could learn in a no time. Granted, CW should have been deleted from the requirements but the regulations change at a snail's pace.

>Young people want the INTERNET. Ham radio is both obsolete

True, even hams love the Internet, no secret there. And yes, it is obsolete, we're doing the same thing we did 30 years ago exactly the same way. No technological advancements.

>and humorous in it's self-admiration and self-serving imagined
>importance in the scheme of things.

Here you show how envious you are. Looks like you would love to be a ham-if you could only pass the test!

> Future: Ham radio will be DEAD by 2010-2015. ALL freqs above 220 MHz will
> have been allocated to emerging wireless technologies before then, around

Interesting question. I suppose you could give the police an anonymous tip, or, better yet, an anonymous tape recording of such conversation with location & frequency info; they might be able (if interested) to get a wiretap warrant.

Hmm...I'll have to think some more.

Since you are not allowed to monitor cordless phones, alerting police to
something heard would incriminate yourself.

From the FAF - Frequently Asked Frequencies
on http://www.strongsignals.net/htm/oak_faf.htm

Cellular Telephone [22.902]

Chs Freqs (base) System Use

991-1023 869.040 - 870.000 A - RCC voice
1-312 870.030 - 879.360 A - RCC voice
313-333 879.390 - 879.990 A - RCC data
334-354 880.020 - 880.620 B - Telco data
355-666 880.650 - 889.980 B - Telco voice
667-716 890.010 - 891.480 A - RCC voice
717-799 891.510 - 893.970 B - Telco voice

Transmissions are FM (some systems are adding digital).
Channels are 30 kHz apart. Mobiles transmit 45 MHz below the
base (824.040-848.970) and are usually repeated by the base.
Channels 991-1023 are also identified as Chs 800-832.

In NJ, it is legal to have a scanner in your vehicle, as long as you are not breaking the law. If you are found in possession of a scanner when committing an offense, you are to be charged additionally.

Having the public glued to their scanner works in both good and bad ways. In my dispatching days, I recall one occasion when there was a report of a intoxicated driver. After transmitting the call, I received a cellular call from a scanning motorist who just saw the suspect vehicle. The vehicle was well ahead of the patrols in my jurisdiction, but not quite into a neighboring jurisdiction yet. I advised the next jurisdiction via radio and they started their patrols enroute. A Sheriff's Officer was in the other jurisdiction near our town line and was scanning local departments on his radio and heard the transmission. He actually made the stop, the locals arrived, and the suspect was DWI, suspended, etc. If it were not for the updated information from the scanning motorist, he would have probably skated.

However, I also recall receiving calls from public who heard something on their scanner, but their information did more harm than good. Lastly, I remember there were some residents who were known to have scanners and we dispatched calls accordingly, when it pertained to them.

Actually, I picked on up late night! In spite of all the rumors, I'd have to say, so far, it's one of the nicest scanners I've ever used...and I've had a few!

I'm doing multiple monitoring of Warren, Michigan's 850MHz TT system, also the cities of Madison Hts, Troy, Sterling Hts.. on conventional systems. Everything works just fine! It's very sensitive! I'm running it in the house right now, using a 13.8VDC power pack, Radio Shack's telescoping antenna with a BNC right angle adapter, and Radio Shacks external speaker. One really nice thing I noticed right away is NO squelch tail! The back-light is very bright on the PRO-2067, unlike the PRO-92. Lots of audio punch!

Best part is, it's still on sale!

You know the Sony was recently clearance priced most everywhere for $99, including the SC1-PC. I believe they're all gone now. So the one you're looking at could be a money-doubling opportunity for the seller. That may not matter to you at all.

Of course, they were well over $300 new, I think, and reasonably priced then.

That being said, I picked up an SC1-PC when they were $99, and I have to say that it is a very nice scanner. Audio is good, programming is different from your usual Uniden/GRE, but not difficult, and the performance seems excellent. I don't think you'd be unhappy with it.

I had one for a week right after they went on sale. While it has nice features, I didn't really like it.

First, there is no indication that you have locked onto a trunked system like there is on Uniden Trunktrackers. This caused me to not know whether I was in range or not. (The Uniden goes from rolling scan to dashes indicating that you have locked on.)

Second, It is a longer and more intensive programming sequence to program in trunking channels. Maybe I am just used to Uniden's format, but I had to have the manual open the whole time, and even then I had to refer to notes I found here on the Newsgroup to decipher things.

Little weird things like starting trunked freq lists on the second channel of a bank (labeled 1 since the banks start at 0) were aggravating.

I generally like Radio Shack scanners, I have a 2004, a 2005, 3 2006's, a Pro43 and Pro64, but I just didn't like the Pro2067 nor the Pro92 I played with for a while. Nothing particularly "wrong" with the 2067, but I just prefer the Uniden way of programming trunked systems, probably because I have figured it out. My 245 is with me constantly and is a snap to program now.

Personally I will be getting a couple 780's when they come out. I might end up getting one of Radio Shack's Uniden made trunktrackers in the meantime.

Eric, it isn't as easy as you would like to make people believe. The NNTP server
marks which posting host made the post. Login & authentication is not nearly as easy to
spoof as you are attempting to state.

> The IP listed in the "nntp posting host" can be easily put there by any number
> of software packages designed to do bulk e-mails and mass messages.
> In fact, given @homes use of an internal proxy, it is very easy to post
> in such a way where it appears that someone is posting from here,
> when, in fact they have posted from somewhere else insode of @home.

So prove your theory Eric, spoof me, you have my permisssion to do
one single test which will be clearly marked as a test.

BTW - @home does NOT use internal proxy for everyone, and that is
why they give directions for static IP info for their users on their web site.
To verify that click below:
http://home.com/support/ie/troubleshooting/netsettings/95sticker.html

> It isn't that hard. In fact, you can be spoofed is just the same way
> (your IP:24.0.49.240) can easily be placed within a anonymous posting
> through cotse.com (and be made to appear from litterally anywhere
> in the @home system). Now, do you really want to push this point?

Yes I do want to push the point Eric. If a post was made via cotse.com
then the header info will still look TOTALLY different. For example, see
below the header info for a attempted trouble making post that recently came from
cotse.com. Compare it to the header info from YOUR posts earlier originating
from the @home system.

Eric, I haven't changed ANY of your words. Don't accuse me of making you look bad, you do that to YOURSELF!

> I won't bother to argue, mostly because I don't
SNIP

It's because you know you have been caught again & there is nothing you can do about it.

SNIP
> Now I am telling you: let it go, before you really do lose your account.

This is the funniest part of your message, Eric. I have done NOTHING that would cause me to lose an account. YOU are the one who is using thier ISP to launch troublemaking via the use of multiple ID's!!!

>Just say "I heard it on my baby monitor or Radio Shack walkie-talkie, which
>just happens to share the same frequencies as most cordless phones."

That won't work because it is illegal to divulge what you heard, even if you heard it on a baby monitor, because you would still be divulging what you heard from a cordless phone. The best thing to do would to just give a tip based on the information you obtained. Call it in anonymously from a pay phone and don't mention that you found it out from a cordless phone call.

Are there any mods for this radio? I have searched all the popular sites, and done some digging, and I can't find ANYTHING on this radio... so if anyone knows, or knows where to go, I would be grateful if you would share! I'm not looking for a cell mod, I'm talking scan speed, other stuff like that...

As I recall, the audio output level is limited on the earphone jack, to prevent you from blowing your eardrum out. However, if you're using it for an external speaker, you can jumper the grounded barrel of your BNC antenna connector, to the grounded ring of the earphone jack. This will bypass a series resistor on the ring side of the earphone jack, and bring the audio up to normal levels.

4105. FS: BC895-XLT Scanner

Newsgroup: rec.radio.scanner
Date: 2000-08-20 00:00:00 UTC
From: Bill Crocker <bcrocker@home.com>
Message-ID: <jpWn5.5617$QW4.85752@news1.rdc1.mi.home.com>
Source record: 81633

FOR SALE:

Uniden Bearcat BC895-XLT Trunktracker Scanner Radio

The BC895XLT TrunkTracker is one of the most powerful scanners available. Designed for serious scanning of conventional VHF/UHF land, sea, and air communications, and for automatically tracking Motorola 800 MHz trunking systems! Triple conversion design.

29-54, 108-174, 216-512, and 806-956 MHz frequency coverage (less cellular), 300 memory channels, trunk search and scan, selective lockout and delay, instant weather access with storm alert, 300 channels per second scanning, built-in subaudible tone squelch (CTCSS), computer control port, rotary tuning dial, 10 priority channels, bargraph S meter, search autostore, data skip, and even a real-time trunking activity indicator.

Full 2.7 watt audio with external speaker and tape recorder jacks. Ruggedly built and compact, the 3-1/2 pound scanner measures 10-7/8"W x 3-3/8"H x 7-1/2"D and is powered by an AC adaptor included. Telescoping whip and complete owner's manual are included, along with original box, and warranty!

I bought two, one for the house, one for the car, but it's a little too big to fit anywhere in my car!

Brand new in the box, $175.00, and I'll pay shipping within the U.S.

>> 10,000 feet" rule.

>I was not aware that such a rule existed.
>I'll call down to the FAA office on monday and have them clarify it for me.

I guess you don't fly much, or else you didn't pay attention. I don't know if it's an FAA rule or the airlines' idea, but on every flight I've been on in the last six years (and that's been quite a few, anywhere from one to three round trips *every* month, though that's nowhere near as much as some folks!), there's been an announcement that all portable electronic devices, even those that can be used during cruise, have to be turned off before pushback, and can't be turned back on until sometime after takeoff.

Most airlines say that that will be at "10,000 feet" but Alaska Air, whom I use fairly often, says "until 20 minutes after takeoff".

On AA ascents I've noticed that the cockpit signals the cabin that "PEDs are ok now" with two quick dings on the "fasten seatbelts" bell, after which the f/a's make the announcement, and there is a great rustling throughout the cabin as we OBTs reach for our laptops. :-)

Similarly, all PEDs have to be turned off shortly before landing and must remain off until the a/c is parked at the gate.

The key point though is that no rule strictly outlawing ALL PEDs under all circumstances exists. American, ferchrissakes, *hands out* portable DVD players and movie libraries in international f/c (the in-seat 8mm tape players formerly used were forever breaking down). As you can see from the section Skip quoted, it is up to the airlines to determine what they feel is safe to use on their aircraft, and under what conditions.

By the way, things are much tighter in Europe. Lufthansa bans CD players and laptops that have CD-ROM drives. Iberia does not allow *any* PEDs in flight! On the other side of the world, Qantas's rules are similar to the U.S.

I've had one for a couple of weeks, and overall I like it more than my
BC-895XLT.

I haven't really used it for trunking, so can't evaluate how well it
does that. I got it mainly because it has DCS in addition to CTCSS.
I like the instantaneous decoding and display of the DCS or CTCSS
frequency. More and more agencies in my area are using DCS, and I
wanted to be able to listen to them without hearing distant signals on
the same frequency.

My perception is that it is less sensitive than the 895, using the
same antenna setup, but I find that I'm mainly interested in hearing
nearby signals most of the time anyway.

No doubt that the internet is more attractive to many and ironically for some of the same reason Ham Radio had it's popularity. While the Code is a obstacle for many there is some satisfaction to learning it. True in today's society and technology it is a dinosaur but God forbid if it ever comes to the need to know it as if that happens then it will be an event like the sunken Russian sub. I don't think it should be required but only for the top Ham Licenses and then the reward for it should be increased bandwidth in the CW bands which in my opinion should be shortened and voice bands enlarged if possible. I don't agree with doing away with the code but all voice privileges should come with theory and rules and regulations rather than code requirements. 5 Words per minute isn't or shouldn't be enough to stop someone but voice privileges should come with theory and rules not increased code.

Will Ham Radio be obsolete ? who knows could be and the pool is dwindling but not beyond being turned around.

John,
you seem to lack a certain amount of computer prowess here.
do you have any idea how easy it is to use a news browser
that can "munge" headers?

Why don't you go over to alt.hacking or alt.binaries.hacking.beginner?
There are guys there than can show you just how easy it is to make the
headers look like they are coming from one place.

The IP listed in the "nntp posting host" can be easily put there by any number
of software packages designed to do bulk e-mails and mass messages.

In fact, given @homes use of an internal proxy, it is very easy to post
in such a way where it appears that someone is posting from here,
when, in fact they have posted from somewhere else insode of @home.

It isn't that hard. In fact, you can be spoofed is just the same way
(your IP:24.0.49.240) can easily be placed within a anonymous posting
through cotse.com (and be made to appear from litterally anywhere
in the @home system). Now, do you really want to push this point?

and now begins the harrassment John Mackey is so well known for.
First, he will insist that I am lying, then he will trot out more messages
showing the same nntp posting host (its real easy to do considering
that the ip listed happens to be a shell account in Phoenix on a unix box)
then he will clip and cut to make it appear as though I said one thing,
when in fact, I said another.. ad nauseum.....

I won't bother to argue, mostly because I don't have the time for it
(I am in the middle of setting up a cybercafe' in downtown and won't
have the luxury of time to sit here and banter back and forth over who
did what and where.)

So, you go right on doing what you do John. I could really care les.
I thought I would point out to all the others in here that you have a
long history of repeating all your mistakes.You just won't let it go.

Now I am telling you: let it go, before you really do lose your account.

a
> prelude to a formal statistical analysis being planned. Any ideas would be
> welcomed.

OK.

Hamfests: Attendance is way down across the board. Dayton down by 3000

Radios: Still way way overpriced for what is inside. Dealers cryin the blues
Inventory not moving, esp HF rigs. Who in his right mind would
spend
$1500.00 (or more) for a HF ham radio, which inside is put
together no better
than a $85.00 Korean VCR? Put that cash towards a new car or
a vacation
in Europe.

Hobby: Dying on the vine. Literally! SK in QST is up to 1.5 pages per
month. No new
people (young people - meaning the target market of youthful
white males)
comming into the hobby. Who wants to bother stringing up
antennas, learning
stupid morse code and paying average of $1100-1700 for HF
gear - just to talk
to a bunch of old men?? Young people want the INTERNET. Ham
radio is
both obsolete and humorous in it's self-admiration and
self-serving imagined
importance in the scheme of things.

Future: Ham radio will be DEAD by 2010-2015. ALL freqs above 220 mHz will
have been
allocated to emerging wireless technologies before then, around
2005-7.

in short: STICK A FORK IN IT FOLKS - THIS TURKEY IS READY FOR CARVING!

Cross-posted to: alt.radio.scanner,rec.radio.scanner

First of all, let's not even get into the moral whys and wherefores of scanning the cell bands. This request is FOR INFORMATIONS SAKE ONLY.

I just got a nifty new Realistic Pro-26 from Europe with no-gaps coverage. Like any curious person would, I'm checking out the 800 MHz band. Most of the time, when I pick something up, 80% of the time, it is only one half of a conversation. How do I get both sides? Is this even an option? What's the deal?

Also:

The Pro-26 scans in modulations of amplitude modulated (AM), narrow-band frequency modulated (NFM) and wide-band FM (WFM). You can also change the frequency steps in three incriments: 5 kHz, 12.5 kHz, and 25 kHz. Given these options, what would be the very best way to scan the 800s for maximum coverage and reception?

Any other neat-o tricks with the Pro-26 would also be appreciated... Quite unlike any attempt to turn this simple request for information into a political deabte.

Thanks all!

Nvidia's right

Lot's of things are "illegal"

Certain drugs for instance. Or handguns in certain areas.

It seems to me it always comes down to a question of
pluses and minuses. Minuses might be cost, risk if caught,
difficulty in obtaining. Pluses might be enjoyment,
practical uses. However with digital scanners, if our all
powerful government outlaws them, certainly they won't be
made domestically and sold on the open market so that the
difficulty and expense of obtaining one will make them
for practical purposes non-existant. Government wins this one,
unlike drugs, and guns.

You are wrong. The Supreme Court's decision was made BEFORE the law was
amended by Congress to ban cordless phone listening. Listening to the radio
portion of a cordless phone conversation is now a "wiretap" under United
States federal law and requires a warrant.

>A man was convicted on drug

Yes, it is. Go read the law. If this guy was convicted based on police
monitoring of cordless phone calls after 1994 and the police did not have a
warrant, then his defense attorney was a complete incompetent. (The judge
who
tried the case should have caught on anyway.)

Your story is unlikely to be true unless there was a warrant to tap the
cordless
phone conversations, or it happened before 1994.

The answer is probably that you shouldn't report it.

>If you hear potential criminal activity, can you get in trouble for reporting
>it? Can the Police make an investigation based upon your report?

Well, they could if the report was anonymous and didn't say just how
you heard what you heard. DELIBERATE monitoring of cordless phones is
not legal. Even the police need a search warrant for that sort of
activity (I completely disagree with that law, but that's how it is).
However, accidental monitoring of the conversation via a child's
walkie talkie or a baby monitor is legitimate if one turns the
receiver off as soon as you realize what you're hearing (yeah, right).

So an anonymous report would be a legitimate thing to do, but don't
include a recording that lets anyone know what you were doing.

The important thing is to find/recognize these new frontiers.

It used to be a major treat to hear a signal from another continent, or even across town, but not to kids brought up on internet chat groups and cell phones. We need to ask ourselves what incentives the hobby offers, or could offer, to justify it's exclusive use of valuable spectrum 'cuz if we don't have an answer, it'll go away.

One example, there's a bunch of Hams and potential Hams over on rec.outdoors.rv-travel who are retired and live out of motor homes and use email to keep in touch with kin. A major problem is finding phones to plug into on the road. Some Hams are already providing packet/internet gateways. If there were more, maybe we could bring a crop of these folks into the hobby, then intorduce them to other aspects they'd find useful and fun.

Again, I'm offering an example, not a solution. Let's do some brainstorming and come up with a plethora of others - better ones - instead of sniveling about fate.

My educated guess is that they'll be using one or two repeaters in the
2-meter band (144-148MHz). There will be enough traffic that you
should easily find them searching, but should you feel intellectually
lazy while on the 200 miles bike race, I think all you'd have to do is
ASK one of the hams assigned to a SAG wago or rest stop what freq(s)
the net is using.

Cross-posted to:
rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.scanner,rec.radio.shortwave

Hello, I read the original post on the rec.radio.shortwave group. I am new to the hobby of SWL and one of the first things I tried to listen for was radio amateurs. Needless to say, I only understood about half of the conversations, due to my own technical naivete. I have always been interested in amateur radio, but the cost and technical rquirements were always daunting to me. I had a taste of things back in the 70's-early 80's when I was quite the CB afficinado- Browning Golden Eagle, Moonraker 4, D104, and an illegal 300 watt linear amp- the whole shebang. It was an exciting hobby for a teenager, and the best times I had with it were the times when propagation was good and I had the fun of working stations in the Carribean, and other distant places.

CB has always been amateur radio's black-sheep stepchild, but the technical things I did learn from it were very rewarding to me. One observation that I might make regarding amateur radio: The tech-types always seemed in the majority, and that's Ok, but many that I came in contact with seemed a bit irritated when it came to sharing their knowlege. There seemed to be an exclusivity about the hobby that made it hard to break into.

Many of the observations that I have seen on this thread have been well thought out and honest, and frankly others have had the tinge of the "old boy" club about them that I have found difficult in the past. I am hardly an expert, but here is my suggestion for what it's worth: Promote the hobby. Make it accesible, and be kind to those of us who know very little about technical matters. We all had to start somewhere. We are willing to learn. Accesibility, in my opinion, probably has far less to do with code requirements and bandwidth allotments than it does with those who are into the hobby making it easy for others to join the club.

For radio amateurs who care- be an evangelist! Get others excited, and be willing to answer questions. Help those who are interested to feel the same excitement that made amateur radio a rewarding part of your life in the first place, and the future will take care of itself. Thanks for hearing me out.

Kind Regards,

Larry Pritchard

I found out today that most of the ambulances in our area have switched to cellular phones to do the reports. Plus, our Comm Center is probably going to be switching to a Computer Aided Dispatch System- (Firstcall). Does anyone know of any other comm centers that have switched to that? How did it effect scanner listeners?

Thanks!

OF course it can be said that wild panicky banging is just as effective as SOS when they are on one side of the hull and a would be rescuer is on the other. Just a thought, and a touch of sadness for those souls that no doubt died or are dying very slowly, and pitifully.

Does anyone know what maps they are using? I would love to have a copy to put up on the wall, so I can track them as I listen.. I found a listing of all the stations and where they are located, but that still just tells the general vicinity... I need to be able to look up what they're talking about when they say "Coordinates 8A4"...

Here in the Denver metro area I have seen them using the digital Motorola Nextel radio/phones on the sensitive calls.
Some police depts. in the suburbs are using these too.
Of coarse there is no way of listening to these.

4160. Need: Sony ICF-SC1PC Serial cable pinouts

Newsgroup: rec.radio.scanner
Date: 2000-08-21 00:00:00 UTC
From: Larry Rothman <y10104@email.mot.com>
Message-ID: <8nrt3t$5j34@nntp.cig.mot.com>
Source record: 81515

I just picked up a used Sony WaveHawk ICF-SC1PC but I need the serial cable.
Sony can't get me one. Has anyone reversed engineered the Sony serial cable
for this radio? (Is it in the service manual?) If I can get the wiring
diagram of the cable, I can build one.
I think the cable has a jumper in the mini-din8 connector that disables the
keypad on the radio while it's plugged into the unit.

Any help would be greatly appreaciated.

Thanks,
Larry

They're probably using the grid system in an ADC Map - Coordiantes 8A4 would be (in the ADC Map) Page 8, Grid A4. Give that a try - that's what many jurisdictions use.

The un-blocked version covers up to the popular channel two in
the 2.4 gig range and will allow for varying audio separations
as well as receiving every commercial channel. It is possible
to select AM FM and WFM. Some of the Fed Agencies we have sold
to both love it and hate it for the obvious reasons.
Nice piece.
We are waiting for the first mods to make it go to 2.5 GHz.

4167. I love scanning

Newsgroup: rec.radio.scanner
Date: 2000-08-21 00:00:00 UTC
From: Walker <worldvista@altavista.com>
Message-ID: <8ns6ircnn1@nnrp1.deja.com>
Source record: 81522

Ya know, I really love the scanner hobby. There is so much of interest out there to listen to... not only the police and fire, but much more. I don't even have the world's greatest scanner, just a BC235XLT (the first trunktracker, afaik). No computer control or anything. But I think scanning is just a blast, a hell of a lot of fun.

I also enjoy shortwave... radio waves on the HF bands (AM mode) from 3-30 MHz are not line of sight, but bounce off the ionosphere and can be heard all over the world. There isn't as much interesting stuff, but it gives you the whole world.

For those interested in either or both of these hobbies, please join me on my website, http://swlinks.webalias.com. I would welcome any suggestions for additions to the site. Have some unique ideas or a link you would like to see added? Email them to me at fewtch@yahoo.com (or worldvista@altavista.com), and if it sounds cool I'll add it. I want to make SWLINKS the best (most fun) website in the world for the radio hobbyist. A tall order indeed, but not totally impossible! There is so much more to come, please keep visiting!

From: terry1810@my-deja.com
Message-ID: <8nsa7lgtm1@nnrp1.deja.com>
Source record: 81525

Three Radio Shack scanners for sell or trade.

First:
Radio Shack, PRO-43
with stock antenna, ac adapter, box, operators and service manual -
unmodified (but can be), the belt clip inside bottom edge filed off is
the "only" blemish. It belongs to my 80 year-old father and he can't
operate the small keys anymore. He's using my BC9000XLT now.
$250.00 or offers/trades will be considered

Second:
Radio Shack, PRO-43
with stock antenna, ac adapter, - unmodified (but can be)case scratches
since I carried it "everywhere" for quite some time
$175.00 or offers/trades will be considered

Radio Shack, PRO-37, ac adapter,operators and service manual - modified
$125.00 or offers/trades will be considered

All are in good working order. I will pay for the shipping to CONUS
using UPS ground. I also will require the use of a United States Postal
money order for payment.

If you have any questions about my asking prices or anything else,
please send your comments to this email address:

terry1810@go.com

I am currently expermenting with a type of conductive paint to repair my
worn out keypad. So far it is working good.
To replace the keypad you have to take the Pro43 ALL!! the way apart.
Would like to know if any other Pro-43 owners have tried the paint route?

These are only $189 new - why would anyone take a chance on a used one
at this price!

Here's the link to the county's listing... I don't know where I found the
listing I copied down, but this one is more complete, listing addresses and
phone numbers.
If you didn't know, you can tell by engine number what fire station they
came from... Engine 181 would be station 18, 1st engine...
and things like Paramedic 18 and Brush 18 are the station number. There are
a very few minor exceptions to this.
So if you hear a call such as "Engine 261, Squad 26, Paramedic 26, respond
to such and such a place, such and such map coords, etc..." you know it's
the South Glen Burnie station. This can also help you pin down the
locations of those two-and three alarm fires where you see or hear units
from different stations... before I got ahold of a scanner again, I used to
see four or five trucks go rolling by, obviously from different companies,
and wonder what the heck was going on and where they were from... now I
know!

Opto Electronics OptoTrakker PL, DPL, DTMF, LTR Decoder. Also tracks
Moto trunked systems with your radio.

Includes all components: AR8000 cable, serial cable, audio cable,
software (TrackScan), power supply.
Like New, in box

$275

Will consider trades for PRO2006, CSI CD-1 or CD-2 or HF rigs.
(Obviously there may be value differences to make up)

You and the other posters make valid points, both positive and negative. One good use for it that will never go away is Skywarn. "The Eyes and Ears of the National Weather Service" are still a vital part of protecting the public. Doppler Radar,Wind Profilers, and more new technology have not tamed Mother Nature and I believe she never will be. So, our volunteer job will be there from now on. This is only a small part of a many faceted hobby I have enjoyed since 1988. Michael C. McCarty, N8EYE.

Just on this point... about a week ago we were being told that
the trapped sailors were banging out emergency calls for help
on the side of the hull, but what was not clear was whether
or not they were Morse SOS type, or just wild panicky bangings
hoping anyone would take notice??
Either way, it didnt make any difference, and its kind of sad
to have to say that this doesnt make a good example of the
usefulness of learning morse.

THe comment about Hams concetrating on the higher freqencies intrigued me. Now granted any given amateur might well be interested in any given piece of the EM spectrum, to see what he can accomplish with it. But for me personally, I thought the challenge was to cast your signal as far as your skills might allow, HF certainly is the part of the spectrum where that is easiest. When I investigated getting a Ham license, I read the mags, and even joined the ARRL for a year. Where I lost interest was on the concentration on VHF/UHF, and studying the license requiremetns found that that is the very place I would be stuck working, with the first few license levels. Admittedly learning morse at any speed, was not something I was willing to do; try though I did. That said I do think there should be some code requirement at some point I wodner if my lack of interest in VHF/UHF has to do with the fact that when I dialed up any of the pertinent freqs on my scanner, all I could hear was people I could talk to on the street! I live in a small town type areaa, and know lots of folks. SHould I do any Hamming I would like to speak to new people!

My guess is that he probably *is* liable and he ought to take the
fifth (shut up and tell nobody).

>Some time later he confessed to his neighbor(a cop) what he'd done. And
>thus, we know why bozo lost control and screamed wanting to know what hit

>bank... I think he believed us.

I don't have all the information, so I'll hedge my responses here. In
general, I wouldn't have done what this guy did. I don't think one
can be absolutely certain just from listening to a scanner that the
car the cops are chasing is the car that's about to roar down in front
of the house. The what-ifs are endless. Too many of the what-ifs
have a negative outcome.

But again, I wasn't there, so I can't specifically say that what this
guy did was out of line. I can say in general that this sort of
activity is just the sort of thing that usually gets the scanner
community a black eye. Kindly limit your activities to information,
unless you are defending yourself.

That's my humble opinion. (flame filters and thick skin set to full)

I've had one for a couple of weeks, and overall I like it more than my
BC-895XLT.

I haven't really used it for trunking, so can't evaluate how well it
does that. I got it mainly because it has DCS in addition to CTCSS.
I like the instantaneous decoding and display of the DCS or CTCSS
frequency. More and more agencies in my area are using DCS, and I
wanted to be able to listen to them without hearing distant signals on
the same frequency.

My perception is that it is less sensitive than the 895, using the
same antenna setup, but I find that I'm mainly interested in hearing
nearby signals most of the time anyway.

Scanners can help! A couple years ago we had a pursuit taking place - and a local was scanning.

He heard that the bozo was headed down his road ... waited by his fence... and when bozo sizzled by... threw a huge gravelly dirt claud into the grill and across the window...

The driver lost control and slammed into a nearby ditch. The scanner-man was afraid that he might have broken the law in some way-or might be held liable if the guy was hurt... thus kept quite.

Some time later he confessed to his neighbor(a cop) what he'd done. And thus, we know why bozo lost control and screamed wanting to know what hit him. We told him the Earth had jumped up and grabbed him with a ditch bank... I think he believed us.

You had better a good dish or at least a very high gain beam and know where to aim. Throw in a killer preamp for the various ranges that you want(not too wide) and MAYBE, you MIGHT hear something.

Well, there's no doubt that Ham radio is in decline.
Despite the bells and whistles that manufactures add on to
new units, most technology, principles and practice are 30
yrs. old at least. Furthermore, unless you can afford 1000's
for plug 'n play units, the learning curve is steep and the
whole hobby is not really newbie-friendly.

If you gathered a group of young people together
and asked them about it I think their most cogent criticism
would be:

" Why should we go through the bother of testing
and licensure and the expense of (say) HT's ? There's no
one there we know to talk to. And besides, I can already
talk to all my friends with a cell phone and they're sort of
the same thing. I even get a 'free' pager with it. Who needs
Ham radio ? "

I think that hits the nail on the head. Sure, a Ham can
answer all these remarks, but not in any way that's going to get
young people running out to take their Element 2 exams. Why
bother?

I can certainly see the loss of UHF/VHF bands in the
future due to diminishing users and increasing commercial
pressure for bandwidth. I don't see the same thing happening
to HF and so those bands will remain part of Ham radio and
Ham radio will become more and more a "niche hobby." That's
not necessarily a bad thing. There are plenty of these from camping
to bungee-jumping to various hand crafts. They have their
devotees and will continue to do so.

In fact, I partially blame modern Hams fascination with
FM, HT's and UHF/VHF in general for contributing to loss of
interest by young people in amateur radio as these things can't
really "compete" with TV, Cable or cell phones for entertainment,
accessibilty or cost.

So what do I think would attract more young Hams ?
A return to Ham's roots. That means homebrewing HF capable
gear. It's wrong to see all young people as thrill-seeking consumers.
Teens don't learn PERL because they want to be over-worked
dweebs with no life. Sure, they want income. But also, they are
immersed in a technological society and naturally turn to that

technology to express their creativity. Believe it or not, homebrewing really is concerned with smart consumerism, recyling and personal independence and creativity.

Will young people buy that? Ultimately that will be their decision and their responsibility. Young people are perhaps most influenced by mentoring and societal trends. Certainly those societal trends don't appear to bode well for Ham radio: disposable tech., defining citizenship as priviledges recieved rather than as duties owed, credit enslavement rather than financial security. It's not a pretty picture. As to mentoring, that is your decision and your responsibility. You snooze, you lose.

73

Andrew
KG4JBM

P.S. Morse Code. I'm learning it and enjoying it. Still, I think it is not relevant to being a Ham unless that's your thing. But, trapped Russian submariners prove its continuing potential value in emergency communications. Morse can be sent by visual means as well as audio and so has a real place in emergency communications. It's just too easy for standard systems to fail. I think it was a real mistake by the Maritime industry and some Navies to abandon it as a requirement.

YEa, Yea, Yea....

BUT, do 'nt sell the 43, it is probably one of the best, if not the
best hand held scanners ever made, cellular capabilities
notwithstanding.

Porkeyus,

First, since you don't sign your real name, I wonder about the credibility
of anything
you might say, but I'm in a good mood today so I'll respond with my $.02
anyhow.

I don't think its dying, it's definately going to go through a decline as
the baby boomers fade
off the scene, but I wouldn't write it off for the next century. Lots of
new frontiers
where there are no wires laid. Things run in cycles, the Internet is the
"big deal" for now,
but who can say it is the panacea either?

When the bands were reapportioned in the 60's, one of the groans that was
heard
was that ham radio was dying and that the 'old farts' from the spark days
were all that
there was to talk to, nevertheless the hobby has survived til now.

Besides, I don't think ham radio was ever intended to reflect a broad subset
of the population. CB
in fact was what brought it into the millions attention, and since then a
vocal minority (from there?)
has continued to bash the hobby about testing, restrictions and everything
else under the sun. Right
now there are no tests, unlimited power, and no obscenity restrictions on
CB, but their
numbers aren't growing exponentially either, so some of your arguments don't
wash here.

If you think its dead, then move on! Those of us who remain will continue
to enjoy the
hobby.

Rich WA9HHB

There is absolutely ZERO evidence that Morse Code was ever used by
anyone on that sub. It is an urban legend.

> Morse can be sent by
> visual means as well as audio and so has a real place in

Please come up with SOME kind of example that backs up this claim. The
Navy has PLENTY of back up systems. They don't need to be wasting time
or money training sailors to use an archaic mode of communications.

> I think it was a real mistake by the Maritime
> industry and some Navies to abandon it as a requirement.

Not at all. Made damn good sense.

STANDARD DISCLAIMER: I like Morse Code, and I am concerned about the
loss of life on the Kursk.

Hey, a young fella that has a head on his shoulders! Whatta refreshing
post, 'Drew!
I've said all along that the emergency communications potential of Morse code
is the ONLY real justification for requiring hams to know it - at whatever
speed.
Congrats and welcome to ham radio, a hobby that's actually doing fairly well
for one that's dying out... The peceived decline is only partial, some
aspects of it are as alive and vibrant as ever. Homebrewing and kit-built
gear is one of the most lively areas.

Keeping quiet was a wise idea. In today's junk society, some shyster lawyer would likely have filed a lawsuit against the good samaritan on behalf of the crook. His choice to help the police would have likely cost him millions in damages, given today's verdicts by the usual brain-dead juries.

Be sure to check the counties along the route you will take. County patrol cars and city police have some jurisdiction on some legs of the intrastate and interstate highways. Also look for the type of antennas these cars have. they will give you a hint of what freq's they might have available. Look for newer Camaros, Mustangs, and Firebirds. Some counties also have SUVs some with dogs.I travel a lot to Boston to visit relatives and I have seen these cars in all states between Indiana and Mass. Have fun.....be careful.....and hope you have the proper documentation to carry a scanner in your car. Some cops come really unglued if you do not a right to carry a scanner in your car.

4215. Any advice on mobile mounting Pro-2006?

Newsgroup: rec.radio.scanner
Date: 2000-08-22 00:00:00 UTC
From: chow@aol.com
Message-ID: <chow-2208001827430001@ip276.okc3.ok.pub-ip.ionet.net>
Source record: 81353

I am installing a rack in my 2000 Dakota for my radios, but the 2006 is wider than my Motorola MacTrak and can't fit it in the rack with the other radios. The face plate looks like it will come off the scanner easily, just have to lengthen several wires. I just got thru looking at all the web mod sites I could find and nothing on mounting the face away from the unit.

Anyone had any experience doing this? Just from looking it will be a royal pain if I can't find any "extensions" for the 2 groups of wires going to the keyboard and display.

Any help/advice/instructions will be verry appreciated!

Hi Tim. Could you elaborate a little about the I-80 in P? When I travel some of those routes and see sheriffs cars, city police cars, and unmarked cars I am going to watch them and use my freq-counter to hear what I can hear. I would not take a bet that they cannot stop and "assist" in an traffic stop or other police matters.

It would be good to point out the constant OT posts from the CAL's in addition to Mackey.
I'm sure CAL's combined waste more time than anything Mackey might post if you bother to check it out.
Otherwise read the subject line or learn to use filters.
Rick

4224. FS: Pro 2004 $145

Newsgroup: rec.radio.scanner
Date: 2000-08-22 00:00:00 UTC
From: "George B." <kn6ep@jps.net>
Message-ID: <qOHo5.9570$gb.467426@nntp2.onemain.com>
Source record: 81362

I have a Realistic Pro 2004 base scanner for sale. Has bright display and uninterrupted 800 MHz band. Date code 2A7. I am asking $145 shipped to the ConUS. I am setting this price because of a problem - the scanner loses its stored frequencies when the power switch is turned off, including when the 9v battery is installed. I have not had this professionally evaluated. Could be simple, might not be. I have used it in the power ON position 24/7, so the memory problem was not a factor for me. Everything else works fine. Cosmetic is about a 6 out of 10. There is a small tear in the membrane covering the front panel switch. This has no effect on the operation of the scanner.

I have too much equipment and this is one I am putting on the block.

Contact me via e-mail if interested.

>stories they're also covering.
>

I can see a few problems with this.

Firstly, these helicopter microwave systems are very directional, and they don't always have to transmit in the same direction of the helicopters flight path.

If you are going to be flying in a fixed wing, then you would either have to be ...

1. Flying along and maintain a position as near to the microwaves link pathway (which would be difficult for you if the helicopter was stationary or flying slowly). This could also cause problems should you put yourself directly into the Line of Sight of the link path and block the signal getting back to the TV Stations receiver.

2. Or fly as close to the helicopter as possible and try picking up some of the stray microwave signal that comes off the back and sides of the yagi's.

Here's a few details of the workings ..

The most common type of helicopter mounted microwave transmitter is Gyro controlled Yagi Antenna system.

Two types that I have experience with are the BMS and the Skypod.

There are usually two short horizontal Yagi's mounted parallel that are supported by a steerable motor, all within a pod that's mounted under the main body of the helicopter.

When the crew arrive at the scene of a story, the helicopters yagi's and the receiver dish are manually aligned (aided with a GPS giving compass directions). Once a good signal is achieved, the gyro takes over allowing the pilot to manouver (even 360 degree turns) without loosing the signal path.

Of course there is some occasional signal breakup, but usually it will stabilize within seconds.

The receiver dish (usually located up on a mountain or hi-rise building) shouldn't need adjustment, unless the helicopter strays outside of the receivers view. During freeway chases where the helicopters are travelling large distances, the receiver dish would have to be constantly adjusted (I think some of the new systems have GPS telemetry that automatically look after this situation).

Hello to all. I just picked up a new Icom mini scanner last week, and I am looking far and wide for the frequency unblock mod. It is not in the 2000 scanner mod book, but I know it is out there. Can anybody help me out? I like this scanner, even though the small amount of buttons makes it a bit cryptic. The idea of DC to Daylight frequency coverage in such a small package is really cool. I got it because I lost my AR2700 when I visited Texas! :(

4238. Re: Help w/Ramsey SS-70A Descrambler

Newsgroup: rec.radio.scanner
Date: 2000-08-22 00:00:00 UTC
From: Steven Bradley <steven@magicnet.net>
Message-ID: <39A29F66.84858692@magicnet.net>
Source record: 81471

Can you enlighten me as to what the differences are between the SS-70 and SS-70A? I have the earlier version (which worked well for the three police departments I used it to monitor, of which one is now on an Astro 800 system, the other is a type I/II 800 system and the third no longer uses it).

The most recent application was to decode the "scrambled" cordless phones on the 25 channel 46-49 mhz band, works well for that purpose. What applications does yours have?

My SS-70 has a power on or off (off is set as bypass) and a volume control. It is RX in and out as well as TX in and out. As I recall, the RX is amplified and the TX is not, not sure though as it has been quite a while since I last used it. So what is new with the SS-70A.

I am surprised the feds have not shutdown that project of Ramsey's because it can be used to "violate" the law by allowing things to be decoded/descrambled. Oh, that's right, it's not digital. I guess that makes some difference. If so, why the big deal about analog cellular phones?

That's my nickels worth...
Steven

> related.

He has been told this by at least 50 people in the last 6 months. over 100 in 5 years. John-Corky will never change and never get a brain.

BTW, possibly John-Corky's problem is he doesn't understand. The above paragraph written by "q��t��v� ��� " is probably too difficult for an uneducated John-Corky. Words like "publish" and "self-serving" probably are meaningless to John-Corky because of his lack of formal education. It's that or the worse case of denial ever recorded.

If my memory serves me correctly, Nashville is on an Astro system,
translation, no scanner currently can monitor it.

Glenn lost and that was confirmed by someone quoting a usenet poll counter report.

By the way Glenn did set another record for most complaining about off topic post in a month. The other part of the story is he still has the distinction of nearly beating his bud BC as the ratio King.

Depends how they scrambled it, analog or digital. Let's rephrase that. Static or Donald Duck.

If it sounds like donald, it is probably speech inversion. Visit Ramsey Electronics, buy the SS-70A decoder, either as a kit or assembled. Cheaper as a kit, but foolproof if assembled. Be sure to order their box and knob set if you decide to build it, excellent quality stuff they sell. If you need the website (and I think it is http://www.ramseyelectronics.com) you can always visit my page (http://myweb.magicnet.net/~steven) and click on the scanners reference, right column next to my photo (yeah, I am there in living color!) and find it in the list. The page is undergoing numerous changes and upgrading, but the page will always be there. It will likely have a few more entries when I am done with it, but what is there now is good and the links are all valid.

Good luck, I have their earlier version. Now about digital descramling. Probably will sound like static, if you can hear it at all. Not legal. But that does not normally stop you if you can figure it out and keep quiet about it or spread the word without your name associated with it via international places.

I've heard the Netherlands is a good place to do so. The government can make laws for those within the U.S., but they do not affect those who live (ie operate websites) from overseas. More power to such places. To the best of my knowledge, digital decoders for scanners do not exist.

I thought I'd comment on this radio. First, a new cord can be bought for around $2 at Radio Shack or places like Walmart and Big Lots. I've seen them there before, easily available as it is just an AC cord like used on a cassette player, the transformer is inside the scanner.

The antenna is probably still available for http://www.uniden.com but Radio Shack has a nice one that has a right angle connector for scanners, I forget the price - centerloaded, I use it as it works better than the factory antenna which I have unscrewed and stored. The 800 mhz is a small right angle one and is a little special, appears to come with it though. The VHF/UHF antenna described above uses a right angle *motorola* style connector NOT BNC as you may think. It is like what a car stereo uses. The antenna I have described comes ready to plug in with correct plug, not sure if they still sell it, I think they do.

It has weather (auto seek for it, one button) as well as VHF low, high, uhf, 800 mhz and aircraft. It is 40 channels, two banks of 20 and each can be turned on and off. Front mounted speaker. Nice radio - I own one too if you had not guessed. One comment, what is missing, I'd say $80 tops is what it is worth unless it has not been used much because as it gets older the display gets weaker (or power supply, not sure which it is) and needs warmup time. That is the problem mine is having, if anyone knows what is wrong with it, I'd love to know. Runs fine after 30 seconds or so have passed.

Contains 9v backup battery to retain programming. I see it includes shipping, perhaps worth $90 in that case. Considering age and missing antenna/power cord, I would recommend considering offers on it, with only 40 channels it is a little high IMO at $100.

>I heerd some thing about toothpase?

Get some Novus, Meguars, or Blue Magic plastic polish. They all are marked as being able to polish out fine scratches.

Failing that, the "fine cut" paint polishes sold in auto stores, for removing swirl marks and fine scratches on clear coat finishes will be a good substitute.

Finally, any fine metal polish (as sold for polishing soft metals like aluminum mag wheels) - Blue Magic, Meguiars, Mother's, Eagle One, Flitz, Wenol, Nevr Dull, Happich Simichrome, etc - will do the job.

Be careful about recommendations for using toothpaste or more coarse abrasives like Brasso and Noxon. These may take out the scratches but leave the surface less than optically clear, as they tend to use harder and more coarse abrasive particles.

Yes, there was the Police and Aircraft band versions of what you speak of, along with AM radio. Used to be pocket size, made by Radio Shack. But I tested them, neither worked well, and checking the 2000 and 2001 catalogs, I see neither exists anymore. They were around $15-$20 each when they were last sold. May work better in a city. May want to consult http://www.ebay.com for a used one in good condition.

That's great. Thanks.
I'll give this a try. What I can't figure out at this point is there are no voltages present at the serial connector on the radio with the radio turned-on. I thought that I would be able to just scope out the proper pins. I'm thinking the radio senses when it is connected to an rs232 port and 'turns-on' it's own serial interface. That's why you can't control the radio from the keypad when it's hooked up to the computer.
When I had the radio apart to do the blocked freq mod, I noticed the rts and dtr designations on the pcboard. I'm going to take the radio apart again and see if the other designations are there.
Finally, I think the frequencies are stored in NVRAM as I had the radio disassembled for 1/2 hour and my freqs were still there when I reassembled the unit.
Cheers,
Larry

This is typical of UPS. They will bring a large amount of packages into a central hub, then when the pile gets big enough, they load them on a plane, and fly them to their destination state, or very close to it. Then they're sorted again, and loaded on local trucks for delivery.

Hi Mike:

All I have programmed so far is Motorola Type II Trunked, and conventional frequencies, with PL tones. Never had to program any offsets...are they used with other types of systems?

Hi Bill,

the 245xlt requires a Base and Offset frequency be programmed into a trunk bank to enable tracking of Motorola Type 2 (SmartZone) systems. In Sydney Australia we have a 400mhz trunking system used by Government departments, but lately a problem has emerged which does not allow tracking of frequencies below the base frequency.

This is why we are interested to know if the PRO2067 requires a base and offset for 400mhz trunking systems, it might be the answer to the problem.

Thanks
Mike

>thanks Joe

Can't be done...at least not on a cost-effective basis.

You're probably confusing the 860 with it's earlier cousin, the 855XLT. This scanner could be quickly and easilly modified for expansion from 50 > 100 channels.

Source record: 81540

Found this post from egroups.com... Can't varify because I don't have the PC
version but maybe it will help..

Here is what I've found about the wavehawk cable. Please do not accept
it as truth until someone else verifies it. Reason being its been
a
long day.

If you look into the 8 pin din (mini8), pin number one is on the
lower
left and pin number eight is in the upper right. Sorta like this:

6 7 8
3 4 5
1 2

While the DB9 on the other end looks like this:
5 4 3 2 1
9 8 7 6

Put'um together and what do you get?
Din DB9 Description
---- ----- ---
1 2 Transmit from sony to computer
2 8 CTS?
3 7 RTS?
4 Not wired?
5 5 Signal ground (insulated wire, not shield ground)

6 6 DSR?
7 4 DTR?
8 3 Receive from computer
Shields connect only to each other.

I've replaced a number of PRO-43 keypads for people. They are
only about $10 from Radio Shack (P/N 10789808 "KEYTOP").
You can order them at 1-800-843-7422 or visit your local Radio
Shack store. If you need someone to perform the work for you,
I offer this repair through my website.

For the minimal cost and effort involved (radio must be gutted), I
would replace it with a new keypad. Might be a good fix when
they are no longer available.

For sale to a good home. Like new Kenwood R-5000. One owner. Very low
mileage. Great condition.
This is the basic R-5000 package with all the standard filters and options.
With owners manual.
This is the same radio type that is used all over the world in embassies and
government facilities for world band monitoring of the shortwave bands. I am
selling this rig because I really have two of them and this was a spare to
be used in a future project that never worked out.
Original purchase price was about $1200.00 US. Asking $600.00 or best offer.

Well, they may have loosened up a bit these days. All my commercial flying was done in the '70s and early '80s. In those days, a pair of fingernail clippers with a 3/4 inch blade for cleaning under your fingernails would not have been allowed through security. Then again, my trips were international flights to various parts of Europe, so that might explain the tougher rules. British Airways was the worst. I was taking a Panasonic boombox over to leave in the office at the job. The security guys took it into a separate room to be inspected and I had to wait for almost 30 minutes. When they came back out it was all sealed up in a plastic bag with that special inspection tape that shows if you try to remove it. I had to give it to a steward upon boarding the flight, and it was returned to me as I was deplaning at Heathrow. When the job ended I gave it to one of the locals rather than go though the hassles of bringing it back.

4307. Re: Any advice on mobile mounting Pro-2006?

Newsgroup: rec.radio.scanner
Date: 2000-08-23 00:00:00 UTC
From: "Rich Carlson, N9JIG" <rich@n9jig.com>
Message-ID: <rich-46DA4D.12180123082000@news.theramp.net>
Source record: 81397

I didn't catch the first part of the posts on the subject, but as an owner of 4 of these radios and a veteran of several mounting scemes.....

On my old Chevy Celebrity of 10 years ago or so I had a 2005 mounted under the dash. I used 2 small angle brackets that I screwed into the dash with sheet metal screws. I drilled 2 small holes in each side of the radio matching the holes on the brackets (Being careful of overbiting the drill...) and 2 very short sheet metal screws holding the radio on each side.

The radio fit like a glove, it is the exact perfect size to fit between the glovebox and ashtray. The angle was perfect for viewing the display at a glance.

Since the Celebrity was front wheel drive the hump was only an inch or 2. On this rise I mounted my other radios of the time (a TAD M8 and an M8U, as well as a BC760, and before the TAD's was a couple of Micors).

The next car was a Ford AeroStar. I mounted the 2005 to the center console with similar methods, but this time fron the bottom part.

My next car was a Ford Explorer (never had any problems with the tires...) I removed the center console assembly but retained the die cast bracket underneath the console. I then fashioned a bracket assemby to hold the 2005 and other radios.

After a year or so I replaced that contraption with a professionally installed console system holding a couple Spectras, the 760 and the 2006 that replaced the 2005. This time the 2006 was velcro mounted to a flat surface that had ben intended for a MDT for this particular consol. I removed the fold-up feet of the 2006 and shaved the bottom flat. I used wide velcro, and it has remained there for several years. The same console is now in my Windstar.

If you intend to use brackets, I sugest getting some very short sheet metal screws. I would also buy a replacement case for the radio and hold onto it. A couple of years from now you may reallocate your radios around and want to put the 2006 on a desk. Removing the old case with holes in it and replacing it with a new virgin case will make the asthetics work better. The small holes drilled into the metal frame will not hinder operation of the scanner as long as you are carefule. Remove the case before drilling and be sure your drill is going to go into some metal and not into a heat sunk transistor (I speaketh from experience.)

I'm honestly not sure what the difference between to 70 & 70A are. The
features of the 70 sound the same as the "A"
>
> The most recent application was to decode the "scrambled" cordless phones
> on the 25 channel 46-49 mhz band, works well for that purpose. What

Yes the 70A works well in this arena, however I find monitoring phone
conversations both cordless and cellular to be rather boring. My
employer has installed voice inversion on their comm system so it's
intended use is to be dedicated to monitor that. I could use my portable
that's issued to me for this but this would create some problems such as
leaving it on 24/7 then when I need it, it wouldn't fully charged etc.

The 70A has a seperate bypass switch, this maybe the difference between
the two.
>

> makes some difference. If so, why the big deal about analog cellular
> phones?

The FEDS did shut this down. I beleive it was two years ago one of the
three letter agencies raided Ramsey and confiscated alot of their kits.
If memory serves me correctly micro transmitters that could be used as
bugs and the descramblers were the items they were mostly concerned
with.

What I don't understand is there is another company here on the net
pushing descramblers without any hint of federal intervention. In fact
if I can not find the fix for this annoying hiss on the 70A I will be
buying one of these units for my application. The reviews that I read

have been very good. The Ramsey was more in line with my budget
however.

Thanks for your input --Dan--

I am not real familiar with trunking. Since none of my scanners have that capablity. However, I suggest you go to:

http://www.strongsignals.com

They have message boards just for trunking in addition to lots of scanner news and reviews and news. I feel it is the best scanner web site available.

Since I do not know all the ins and outs of PSP, OSP, CTSP, MASSSP, NYSP, and all the rest out East I will always put in the surrounding county freq's. I am fully aware that cops from other states have their own operating standards. Please folks I am not trying to be a "know-it-all" about I-80 or any other highway. I travel a lot and I was just recommending some common sense scanning tips. In some states maybe the local cops do not have any "stopping powers", unless an emergency takes place, but while some one is tooling along at 100mph, or is driving a stolen car, some cop, or Joe citizen, sees this and calls it in. It would be nice to have the freq in activation to catch the action. Maybe the local cops are chasing the bad guys and they jump on I-80. Is the cops going to stop and wait for the state cop to show up? Don't think so. In some states the ILEEN freq's are used, 155.4750 and 155.4450, for interagency communication. In closing enjoy the hobby and be careful when entering Ohio on any boarder. Last year I logged over 5,800 miles going back and fourth to Mass from Indiana. Ohio was the most "state police active" on the highways. They are at the "Welcome to Ohio" sign and about 10 miles before "Leaving Ohio" signs. Penn was some what active. Saw more cops on side trips then on the highways. Happy Scanning!

That's a rather brave experiment!

Considering the resale (and sentimental) value of the 2006, why not consider buying another radio that would better fit the bill, perhaps the 780xlt or 2067? Both are more oriented towards the mobile user in mind, and have similar coverage with the added bonus of trunking abilities.

But, if you must.. (yikes, I can't bear the thought!)

Good luck!

One of Bill Cheek's "Scanner Modification" books has an article about
adding remote control to the Pro-2004/5/6.

You do not want to simply lengthen the wires to the front panel. These do
not simply contain audio switched DC control voltages. Many of them carry
fairly high frequencies and the scanner isn't going to be happy if you
just make them longer. The longer wires will pick up more RF noise, too,
both from each other and from the surroundings (which can be pretty harsh
in a car).

The most reliable way to "remote control" the Pro-2004/5/6 is to put CMOS
analog switches across the keypad crosspoints. Of course this doesn't get
you a remote display...

PSP has juridiction on I-80

>When I travel some of those routes and see sheriffs cars

Cruising or transporting a prisoner. A Sheriff can not pull you over
legally. A court ruled they aren't as well trained as reguler cops.
Sheriffs only deliver paper around here. At least in my county.

>city police cars,

Traveling from point A to B.

>I would not take a bet that they cannot stop and "assist" in an traffic stop
>or other police matters.

Very rare around where I live. The only time I knew of a town cop
going to an Interstate was for a 10-45 when there wasn't any PSP
around. And that may have been on the Exit. Anyway, nobody other than
PSP enforces moving violations on the Interstate. If you're speeding,
then I wouldn't worry about anybody other than PSP.

Yeah. Get another phone just like it, recharge the handset, then
disconnect and power down the base.

Now let the handset drift and attempt to acquire a base. It won't be
your base. It will be somebody else's.

Chances are that your phone won't be as strong as the local phone, so
although you'll attempt synchronization with the remote base, you're
not likely to get in. However, you may easily hear the conversation
taking place...

A friend of mine tried this. He says it works. I can't think of any
good reason why it wouldn't.

It's true ramsey doesn't sell half the kits they used to anymore, sucks...
What's the difference between the ramsey kit descrambler and other kits?
All the other descrablers I've seen have to adjustable knobs for the
freuency, however the ramsey kit has to adjustments. Does this mean the
ramsey kit adjusts automatically or it's preset to a certain set of
freuencies?

Also keep in mind that not all 900mhz phones use the same frequencies and
might not share the same spread spectrum technology.

Chances are you can't. (How would you resotre something that was never
there?) Of course it helps to actually have some information before we
try to answer that.

I was going to pick up a BC245 from Javiation, but was informed they are not permitted to sell any Trunk Tracking scanners in Europe. I (obviously) didn't know that. I do want trunking included.

What scanner (handheld or base) can you get with *all* the goodies (cell) that includes trunking?

Is there such a thing?

Thanks,

SR

Speech Inversion is accomplished by mixing the speech spectrum
(typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some
audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz
constituting the speech inversion.

Date: 2000-08-24 00:00:00 UTC
From: StickyRiceBalls <nospam@nospam.not>
Message-ID: <81hp5.602$uo4.49365@nnrp3.sbc.net>
Source record: 81317

Hmmm, well I don't know that much about it - maybe it's just where Javiation
is located? What was the name of the place in the Netherlands?

Overseas shipping rates wouldn't be a deterrent. Anyone have an idea of
where I
could be up a cell capable Trunk Tracker? Ideally, I would like the full
coverage versions of the BC245 or the BC895 but will consider any others...

You know, actually - I guess if it was this easy to get one (just order
from
overseas) - we'd all have one right? :)))

Thanks again,

SR

I have finally decided to sell off some of my gear to help finance the purchase of a new receiver. Everything listed is either currently in use, or has been put on a shelf due to lack of space. If you are interested, please respond to EMETIB@SWBELL.NET. I usually check my mail daily after 6:00pm CST. My EBAY id is Consigliori if you want to check out my user feedback (all positive). The end result of all of this will be the purchase of a higher-end receiver. Models I am looking at include the NRD 545, R8B, AOR 7030+, or possibly a R-8500. If anyone is planning on selling one of these receivers in the near future please let me know.

Buyer pay&#65533;s shipping. Payment by USPS MO only.

I am trying to borrow a friend&#65533;s digital camera for this weekend so drop me a line if you want to see a picture of one of the receivers and I will do my best to send it to you.

Thanks,
David
&#65533;&#65533;&#65533;&#65533;&#65533;&#65533;&#65533;&#65533;.
Icom R71-A
Condition &#65533; 8 on a 1 to 10 scale
Comments: Smeter light does not work &#65533; S-Meter itself works fine. Has Notch and PBT. Quality receiver. Built like a rock. Very Sensitive. This is a used receiver and the case has the normal scuffs/scratches/dings and pings that come from everyday use (the display has no imperfections and is clear and bright. The front panal is also in great condition). The receiver itself works perfectly. Comes with original Owners manual.
Price - $400

Yaesu FRG-8800
Condition &#65533; 9
Comments &#65533; Excellent audio from the front firing speaker. A Very good receiver in very good condition. Has a few light scratches on the case but that&#65533;s about it. Works perfectly. Comes with Original owners manual and a copy of the service manual.
Price - $300.00

Yaesu FRG-7000
Condition &#65533; 9
Comments: the &#65533;local&#65533; light indicator is out. The GMT/SET1/SET2 as well as the clock itself work fine. Good Receiver. Excellent condition. A small scuff mark on the top of the case, and a very light fading of paint on one small corner are about the only imperfections with the way the radio looks. Works Perfectly. Comes with original owners manual.

Price - $225.00

Radio Shack Pro-2006
Condition • 9
Comments • Cell Unblocked. Works perfectly. Have 2 of them so 1 has gotta go. Does not come with Manual.
Price - $230.00

which is TOTALLY ok on ebay! I have complained about this same behavior to ebay, specifically when someone tries to sell a scanner as able to get cell phones when it doesn't even get 800 mhz. They said their sources said that particular scanner could not get cell calls and therefore it would not be pulled, even though he was obviously saying it did!

Actually Blake, I have received overwhelming confidence votes from
the only recognized PARG "GROUP", with the HQ in Oregon. There
is no other recognized PARG according to the FCC or ARRL. YOU
seem to be the only person who knows of a PARG in Missouri. (BTW-
the "G" in PARG stands for "group", so it is not a "club" as you called
it!!!!!!!!)

I can't speak to Helmut's phraseology (and you might make allowance for
his likely being a non-native English speaker; phrasings you find
insulting might have come from a completely different mindset than what
you read into them). But his analysis is correct. You simply don't
understand the nature of the problem.

Generally, the tracking is done from the point of shipment (regional hub in vicinity of where the package was sent) until it arrives at the hub/distribution location where it goes onto the local lil brown truck. Once it is in the hub/center local to you, you, the customer can no longer track it. This whole tracking thing is to make the customer think he's a part of the system, an insider if you will, and to keep impatient folks from calling everyday about the location of their package. I've tracked items before, and have always found there's a few days when it seemed to sit "arrived destination" but I didn't get anything. The customer isn't the destination as far as UPS is concerned. Their local distribution center is. Once the package "stops moving", it'll be 2 to 4 days until you get arrested, eh...I mean your packes gets to your door. :)

As far as what to do if the authorities show up at your house...sometimes they will arrive looking like UPS drivers. A 2nd person in the truck is common for UPS training purposes. A 3rd or 4th person in the truck are probably investigators on the county or local level. State and federal folks prefer to drive themselves and be parked near the target of the investigation and bum-rush the door after the package has been signed for. If you see one or more official-looking vehicles on your street be suspicious. If the UPS truck arrives at a time very much unusual for your neighborhood, such as 9am (and they love 9am 'til 11am) when you usually don't see the lil brown trucks until 3pm, be very suspicious. If 2 UPS folks unass the truck DON'T OPEN THE DOOR! A driver and trainee are common aboard a UPS truck, but the driver, the senior guy (tired of getting in and out of the truck), sends the new guy to the customers door. Two people at your door means one of them is a law enforcement official. The UPS security division has plenty of brown outfits set aside for just this purpose, letting officers and agents look like the tightest people in the shipping business.

Why not instead publicize the militia-screwballs
what broadcast daily diatribes of hate-speech
and edge-on dumb people to commit illegal acts
on a daily basis, on stations like WGTG and WWCR ?

What about the "broadcasters" what recently spewed garbage
about Art Bell on WWCR ? I hope Bell cleans every freakin
red cent from WWCR's bank account and that station get's it's
festering microphone silenced forever by Federal Marshals.

Howard Stern is a much more responsible broadcaster
who has more integrity, intellegence and broadcast
accuracy in his left finger, than all the domestic
"SHITwave Broadcast" stations can ever hope for in a Month of Sundays.

Probably possible, but the conditions are very limited. There are a
few GSM operators that run un-encrypted, in fact some phones will even
warn you that your provider is running un-encrypted. Listening in on
such a conversation would not be technically difficult. If you would
like to listen in on an encrypted conversation over the air, unless
you have the budget of the NSA, or a similar organization, not in the
cards. It is much easier to tap into the landline side, which is not
encrypted.

>could be up a cell capable Trunk Tracker? Ideally, I would like the full
>coverage versions of the BC245 or the BC895 but will consider any others...

AFAIK the only full coverage version of the BC245 is marketed in
Australia!!

Seeing that you are in the UK, I take it you know that the BC245 will
only work in trunking mode on Motorola systems** and NOT MPT1327 (most
common) type trunking, and that the BC895 will NOT work on any trunking
system in the UK ??

** UHF only, Met Police in London and a couple of USAF air bases..
Also the US version will not track the Staffordshire Police and Fire
StarNet system on VHF, due to the 10/20KHz channel spacing steps on the
BC245.

Not likely. Scanners typically receive FM only. CB is AM. Also, very few
scanners receive below 30 MHz.

Exactly why I have been waiting for the BC-780. It's range starts at 25 MHz, but it's beginning to look more and more like vaporware. I might as well go pick up a used BC3000, except that I really want something that has text tags AND covers the CB range.

This WILLl work with the crappy Panasonic 2.4 GHz phones which they falsely claim are "Spread Spectrum" (for which Panasonic should be prosecuted for false advertising). However, with Digital or Digital Spread Spectrum phones, this will not work since, as the previous poster said, they need to be "married" to obtain a seed key for decoding the digital datastream.

I doubt they carry a "CE" label so we are really in the same boat as the
BC- when it comes to UK/EU sales.

I would very much doubt putting them forward for testing/approval
ourselves wouldn't be cost effective and they could fail.

4421. Re: PRO 92 Upgrade

Newsgroup: rec.radio.scanner
Date: 2000-08-25 00:00:00 UTC
From: Ken Roberts <kenr55@bellsouth.net>
Message-ID: <niCp5.9721$vO4.3041694@news3.mia>
Source record: 81212
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I had a situation where my "old" PRO-92 worked better than a BC-245. I was trunk tracking in a city using my BC-245, and I kept losing the control channel, right in the City limits of the system I was trying to track! My "old" PRO-92, since it relys on the sub-audible data, tracked the system flawlessly, with only two "wobbles" in a one hour period. In that paticular case, it beat the BC-245 in trunk tracking performance. Something to keep in mind.

K-S-0-F (callsign) dribbled all over himself:

> I didn't have any reason to "play it" because there was nothing to
> gain by doing so.

You have everything to gain, like credibility. You won't post the information because you can't. The information doesn't exist, except in your fantasies.

> Also, I don't care if you post your data or stay on the group,
> that is your choice.

As usual, you're trying to evade the issue, Toilet Boy. You know you've lied repeatedly about your so-called degrees, I know you've lied, and so do the people who've been victimized by your drivel. Don't waste my time with your stock never telling a lie in your adult life hyperbole. No one believes your pathological prevarications.

Even if you could post the information about your degrees, you don't want to (because you're a coward) and you don't want your critics, such as myself, to disappear. You are a masochist and thrive on the negativity. You enjoy causing what mayhem you can in the process and feed off the chaos. You're a complete sociopath, Toilet Boy.

Show some courage, Toilet Boy, and be honest for once in your squalid life. To remind you:

I'll post my data and then leave the scanner groups forever.
Here are the terms again, just in case you develop the intestinal fortitude to face yourself. So, show us, Toilet Boy, are you man enough to face yourself?

Here's the deal: When you post the proof of your alleged degrees AND it's verified, I will post the information about my psychology degrees.

I'll even sweeten the deal. *After* your information is verified, I'll post my data and then leave the scanner groups forever.

THAT is an outright lie!! It is so brazen that it can only be regarded
as a deliberately provocative attempt to inflame users here. To those who are
tracking such things (and reporting the same to John's ISP) this can be counted
as a deliberate troll, clearly designed to ridicule the late Mr. Cheek and
provoke the more serious users here. Give it up, John. Please, just give it up
and move on to something more worthwhile.

From: Harry Marnell <marnells@snowcrest.net>
Message-ID: <8o7p2d$rj2$1@news.snowcrest.net>
Source record: 81232

I can post - or email - schematics or owner's manuals for a number of recent scanners..and a
couple that aren't on the market yet.

Let me know what you want and I'll try to get them up or out ASAP.

Email me DIRECT < marnells@snowcrest.net > NOT thru the group.

No promises... but no charge, either.

Harry Marnell

Don't think you saw the BC895 on sale in the UK, it might have been
(IIRC) the BC9000, a non trunking European version.. The only folks that
have sold trunking radios (BC245) over the counter were Martin Lynch in
London, but for one reason or another they stopped selling them a few
months ago :-(

This is a site on a trunked system in London plus some other info:

<nospam@nospam.not> writes

>I was going to pick up a BC245 from Javiation, but was informed they are not
>permitted to sell any Trunk Tracking scanners in Europe. I (obviously)

No.

What we cannot do is legally sell the BC-245XLT to customers within the
UK or other EU member countries as this does not carry CE approval. We
could sell a BC-245XLT to a customer in the USA but as it would be no
different to one purchased in the USA I doubt we would really get that
many customers :-(

The '245XLT has "limited" use here in the UK - there are two users of
Motorola type trunked systems that the 245XLT could be used with - the
Metropolitan Police in London and UASFE at a couple of Airfields.
Staffordshire Police are another user on VHF however at 12.5kHz spacing
which is not supported by the BC-245XLT.

>What scanner (handheld or base) can you get with *all* the goodies (cell)
>that includes trunking?

We will hopefully be able to offer the Australian UBC-245XLT soon and
whilst this has continuous 800MHz coverage the low VHF band is 66-88Mhz
and the step sizes on VHF (137-174MHz) are 12.5kHz.

If you did then for use in the UK it would be nothing more than a
"conventional" scanner as there are no 800MHz trunked systems in the UK
that the 895XLT could be used with nor would it be any different to the
BC-895XLT distributed in the USA.

Funny,

Always keep reading about how 800 Trunked doesn't work in them thar hills..
. . . .

Well Fayette County 911 in Uniontown, Pennsylvania has been running a 7
channel trunked radio system since late '95 early '96 with minor coverage
problems when compared to Low Band, High Band, and UHF.

The coverage dead spots we have on the new/existing 800 system were there
before but much bigger on all the other frequencies our county used!

You should be able to take it to any Radio Shack for service, and they send it in. However, I don't think they arrived at a solution yet. There was some talk about a $48.00 charge, to change out the main board, but I don't know how accurate that information was. GRE and Radio Shack claim the firmware can not be upgraded.

I guess I'm one of the lucky ones, my PRO-92 works perfect!

4465. FS: BC9000-XLT Uniden Scanner

Newsgroup: rec.radio.scanner
Date: 2000-08-25 00:00:00 UTC
From: Bill Crocker <bcrocker@home.com>
Message-ID: <FJwp5.12656$QW4.169779@news1.rdc1.mi.home.com>
Source record: 81274

FOR SALE:

The Uniden Bearcat BC-9000XLT is a scanner offering great frequency coverage. This models covers virtually every frequency from 25 MHz to 1300 MHz (less cellular, although clear images are between 360~385MHz!). It receives military frequencies not found on most other scanners. You get 500 channels organized in 20 banks of 25 channels each. A VFO control (manual tuning knob) enables fast selection of memories or frequencies. TurboScan allows you to scan up to 100 channels per second and TurboSearch lets you select either 100 or 300 steps per second when searching VHF frequencies. The automatic store feature searches out active frequencies and automatically stores them for you in an available memory location.

Selectable mode allows you to change the default receiving mode (AM, FM-wide or FM-narrow) to hear all the action. You can also change the default step sizes!

Advanced features include: Two Line Alpha LCD, allows you to label your frequencies, i.e.; "Detroit Police", Delay Key (2 seconds), Channel Lockout, Data Skip (the scanner skips over non-voice channels), Backlight Dimmer, High Cut Audio Filter and tape recorder activation.

External jacks include: BNC antenna, external speaker, line out, aux jack and DC power. The BC9000XLT comes with: AC adapter, telescopic antenna and Owner's Manual. Size: 10.5x3.5x7.375 inches. Frequencies: 25-550 MHz, 760-824 MHz, 849-869 MHz, 894-1300 MHz!

Includes Uniden's optional CTCSS tone decoder board, installed!!!

Like new condition, complete with A.C. Power Pack, Antenna, Original Box, User Manual, etc.

Note: This scanner has been discontinued by Uniden, and to the best of my knowledge, distributors stocks have been depleted.

$350.00, including shipping within U.S., lower 48 states.

Bill Crocker

4466. FS: BC245-XLT Uniden Scanner

Newsgroup: rec.radio.scanner
Date: 2000-08-25 00:00:00 UTC
From: Bill Crocker <bcrocker@home.com>
Message-ID: <w6xp5.12664$QW4.170056@news1.rdc1.mi.home.com>
Source record: 81275

FOR SALE:

Bearcat BC-245XLT features second generation TrunkTracking II technology. When the service you are listening to jumps frequency, the BC-245 has the ability to follow the signal. You won't miss any of the action. Even copies Motorola and EDACS simultaneously. This scanner offers 12 bands and a 300 channel memory. Comes with NiCad battery pack, AC adapter/charger, flex BNC antenna, belt clip, earphone and special PC serial cable.

Frequency Range
29 - 30 Ham Band 10 M
30 - 50 VHF Low
50 - 54 Ham Band 6 M
108-137 Aircraft
137-144 Federal Gov't
144-148 Ham Band 2 M
148-174 VHF High Band
406-420 Federal Gov't
420-450 Ham Band 70 Cm
450-470 UHF Band
470-512 UHF "T" Band
806-956 800 MHz Band (less cellular)

"Like New" condition, includes all original items!

$175.00, includes shipping within the U.S., lower 48 states!

Thanks,
Bill Crocker

Keem-O-Sabe,

If your infering that the Indians had a country here first. I beg to differ. What you had was a bunch of naked people, of different tribes, running through the woods killing each other.

With the advent of the "White man" we organized this mess into a country. We threw out the Redcoats, brought in the black man.

Now we had a country. We put on clothes, ran around the woods and killed off the Indians. Then we enslaved the black folks we stole from Africa.

See, thats a real country.

Hardy Har Har !!

>

Some people say that the original 92 works better in certain situations than the 'new and improved' model with the same firmware that the 2067 mobile has. So I would do a little looking around on this newsgroup first to check that possible situation out before I would consider getting any upgrade.

Does anybody out there have the frequencies for State of Idaho Dept. of Lands? Also I'd like the numbers for the Forest Service. I live near the parts of the state that are having the terrible fires and would like to listen in.

4471. BC780XLT Status???

Newsgroup: rec.radio.scanner
Date: 2000-08-25 00:00:00 UTC
From: Digimon <digimon_7601778@hotmail.com>
Message-ID: <N0yp5.3605$Y5.33771@typhoon.tampabay.rr.com>
Source record: 81280

What is the status with the BC780XLT ?? I thought it was supposed to be released in July, but haven't seen anything about it. Are we going to see it soon? how much will it be?

TIA

4472. S.A.M.E. weather alert on Pro 92/1067 and Pro 94/1052

Newsgroup: rec.radio.scanner
Date: 2000-08-25 00:00:00 UTC
From: Jim Keeling <insgeeks@mindspring.com>
Message-ID: <8o6cm1hpv1@slb0.atl.mindspring.net>
Source record: 81281

Can anyone explain what messages are displayed for the SAME weather alert feature on the Pro-92/1067 and/or the Pro-94/1052.

The display on my weather alert radio indicates if it is a watch or warning and what type of watch or warning (tornado, thunderstorm etc.); also how many warnings/watches there are and how many hours and minutes until it expires. Do any of the above scanners display any or all of this information. Thanks in advance.
Jim K.

I tried asking Uniden this through email, but I have yet to get an answer. That was two weeks ago. However, Scanners Unlimited has it listed as available in November 2000. I, too, have been waiting for this scanner and I keep flip-flopping on whether to buy a Pro-2067 cause all I have now is a 2026 and I really want something with text tags.

FOR SALE:

The BC-895XLT Trunk-Tracker is a 300 channel (ten bank) scanner. Since the introduction of trunked systems, tracking a conversation on a conventional scanner was virtually impossible. Now with the Trunk-TrackerT System you can search, lock-on and track a conversation-even if the channel changes between replies. Trunk delay and Trunk lockout is featured. Scan at 100 channels per second. Features: LCD dimmer, S-indicator, channel lockout, count key, weather alert, autosort and ten priority channels. The BC-895XLT even has built-in CTCSS decode!!!

Jacks for: antenna (BNC), ext. speaker, record, aux., 12 VDC power and RS-232 port (requires special software not provided). With telescoping whip antenna and AC adapter. 10.5"x3.5"x7.375"

Frequencies
29 - 30 Ham Band-10 M
30 - 50 VHF Low
50 - 54 Ham Band-6 M
108-136 Aircraft
136-144 Federal Gov't
144-148 Ham Band-2 M
148-174 VHF High Band
216-400 UHF Air Band
400-420 Federal Gov't
420-450 Ham Band 70 Cm
450-470 UHF Band
470-512 UHF "T" Band
806-956 800 MHz Band (less cellular)

Brand new, in the box, with A.C. power pack, antenna, manual, and warranty registration!

****
****
I am including the optional RS232 serial interface cable, that allows you to program, and/or control the scanner using a PC with Microsoft Windows, and the appropriate software!
****
****

$175.00

Thanks,
Bill Crocker

They're suppose to go digital soon. Most PSP bases don't use a
repeater. I prefer them not using a repeater because if I hear a car,
I know they are somewhat close.

I don't know. I assume everything will go through repeaters, but I'm
not sure. They will have car to car MDT to talk with someday.
They signed a deal for MDT with Motorola and the radio system will be
done by M/A-Com. I hope the new system won't work. A statewide trunked
system over an entire hilly state doesn't make sense to me.

Hi Adam I have a Opto Scout model 40,its 2 years old with about two hrs of total use on it.I used it with an Icom R-10 wich I,ve sold because of lack of use.The Scout works very well with that radio in capture mode as well as by itself as a piece of test equipment.I had a different cable made that works much better for the connection between the units, after reading an article on the Strong Signals web site.The Scout is in MINT condition with software, manuals, charger and original box.The Scout retails for 449.00 US,I,d like to sell mine for $325.US obo. If your interested LMK.Craig

Good point, now that you mention it, I don't recall seeing any Ramsey adds in awhile. I'm not 100% on how voice inversion works but I'm going to "assume" (I know a bad thing to do) that the Ramsey will only work with the cheaper inversion systems. I think these cheaper systems use a standard tone that the Ramsey listens for. With the better decoders you must be able to shift or vary this tone making the unit compatable with other systems. I wonder if they work with rolling code
systems ? I know that the Ramsey does not, but then again you get what you pay for. --Dan--

"elliotta" <elliotta@netusa1.net> wrote:

> Oh thank you so much.

Okay... let me try:

There are certain type of mathematical formulae that, if you
remove a single parameter, become simply unsolvable by any other
method than trial and error. Given proper choices of certain
values, the time to solve them by trial and error becomes enormous --
as in, more time than the universe will exist as we understand it
today (using today's technology).

True cryptography makes use of such formulae.

Putting the whole equation that encrypts (and a possibly
very different one for decrypting) data consists of these
well chosen values (typically large prime numbers -- divisible
by 1 and themselves only) into these equations with the keys,
data can be pushed through the encrypting process relatively
quickly. Lots of multiplication and addition, but that's it.
But trying to determine the key -- the user specified part --
even if you know the rest of the equation and the "well
chosen" values -- is only theoretically possible in a *good*
encryption system.

Key choice is important too; that's how most systems are
"broken;" by learning something about how the system is keyed.

Most likely a voice encryption system used by professionals
won't have that problem.

Again, the mark of a good encryption system is that even though
all details about it *except the key* are fully available, it
is unbreakable as far as anyone knows. Breaking one would either
show a weakness in the algorithm or fundamentally change our
knowledge of mathematics. It really isn't just about hacking code.

If you really want to dig into the gory details of the subject
may I consider "Applied Cryptography" by Bruce Schnier or a
thorough reading of the docs and source code to PGP?

Eric

A halfwave dipole is 5616/frequency
A quarterwave whip is 2808/frequency

The result will be in inches.

Example - 5616/300(MHz) is 18.72 Inches (This is a halfwave dipole).
2808/300(MHz) is 9.36 Inches (This is a quarerwave whip)

Happy scanning!

Mark

And?

Sounds like?

Your point?

Are you trying to prove that capitalism is inherently evil?

Sorry but I just can not buy into Communism; I've been "behind the wall".

I can understand your [Helmsman@noguts.coward.commie] point of view but - as stated above - I just think that the government of your people in China and Cuba and VietNam and North Korea - is immoral.

I - intellectually - can understand your personal need and hunger for an absolute and an "iron-clad" "truth" but, I assure you, communism is not the "answer".

Keep reading and looking (and THINKING!).

Are you - have you been deemed- "humor-impaired"?

You might try reading that post about a hundred times and - if you don't
figger it out - turn yourself in because you are truly "humor-impaired".

As far as "gaynet"/"swishnet" on 3.950 goes, these "girls/boys" have the same
right to the airwaves as anyone else!

>trunking?

Its not the Trunking that's the issue but the fact the BC-245XLT is not
CE approved (rather like FCC/UL approval in the USA) for distribution in
Europe. We could put the BC-245XLT forward for certification ourselves
but costs are high and sales would be limited so prices would be forced
up to cover costs - it may also fail.

Trunking protocols in the UK/Europe differ in the main from those the
BC-245XLT and other "Trunktrackers" will work with although as mentioned
earlier in this thread there are two/three users in the UK using
Motorola trunking systems.

Uniden have however introduced the UBC-245XLT into Australia which does
use Motorola systems more widely and it is this model we are hoping to
be able to offer in the not too distant future.

All the best for the weekend.

Hehe,
Good one. Of course, what makes your post so funny
is that an anonymous goon who writes about "Negro's" [sic],

especially on THIS newsgroup, is 100% sure to be semi-literate,
and about 99% sure to be one of those white-supremacists
who thinks he's some sort
of ultra-patriot capitalist for hating them there "Negro's" [sic]
and foams at the mouth about "Red China" and such.

[But I'm sure he's all for "Negro's" as long as he gets to own one...]

Where is the Soylent Green factory when you truly
need it?

4513. AT&T Digital Wireless

Newsgroup: rec.radio.scanner
Date: 2000-08-26 00:00:00 UTC
From: Barry Adair <Barry@Adair.net>
Message-ID: <EgNp5.90446$oj6.1802285@news1.rdc1.tx.home.com>
Source record: 81119

I just had the AT&T Digital Wireless phone system installed at my house, so far it is working great, but would like to know some details, I have read that it is in the 1900 mhz range, and digital so it would be very hard to evesdrop on, but I am just wanting info on the system, if possible.

4514. FS: PRO-75 Handheld Scanner **$90** TO YOUR DOOR!

Newsgroup: rec.radio.scanner
Date: 2000-08-26 00:00:00 UTC

The PRO-75 has 200 programmable channels and covers the "usual" freq.'s
between 29MHz and 512MHz. It is in great (9.5/10) shape and comes with a
rubber ducky antenna and original
users manual. Here's the best part: $90 SHIPPED TO YOUR DOOR! For details
or questions, contact me at rakolari@cyberbeach.net . Thanks!

Adam Kolari

I'm afraid stevw1 is right on this one. I read on the industry Canada the other day that you can only buy a digital scanner if you are an amateur radio operator and can give a good reason for wanting one. The law for digital scanning is not the same as the law for analog scanning here in Canada either.

Andy

According to the proof above provided by Deja.com John (call me
toilet-boy
or
Corky) Mackey is more than a liar. He strikes me as very very sick.
These
are
just 15 of the different names he has used in the past few months.
Thousands
of messages but all are calling people liars or trying to convince us
John
(call me toilet-boy or Corky) Mackey is better than a dead man.

I am going to forward this to abuse@home.net his ISP. Maybe they can
help
stop
the one called John (call me toilet-boy or Corky) Mackey from further
destroying this and the Ham Radio hobby. Maybe we can all write the ARRL
about this great fool of a Ham they have representing the hobby.

Tim Larson think I'll stick with CB!

Listen up John,
I no longer have the time, or the energy to be trying to
reason with the stubborn brick wall that is you.
So, I will put it succinctly and then I will terminate this
conversation.

FACT, in September of 1992, Bill Cheeck was elected
by ops council as head of scannradio fidonet forum.
within 2 weeks, you had made such an uproar, that you
were asked to leave. You refused, and were therefor banned.

Fact, within 2 months, you appear on the internet
USENET berating your situation, blaming Bill cheeck for it all
and generally making an ass of yourself. Since then, you haven't
shut up.

FACT: you continue to deny your actions, even after you pulled them
on others IN FULL VIEW of the usenet public.

FACT: Dejanews has full copies of all your exploits dating
back over 8 years!

FACT: in the last 2 months, you have posted a sum total
of 672 times, with only 5 articles ON TOPIC for any of the usenet
groups you posted to.

FACT: you claimed to have degrees, yet a check of the online
databases that carry such information reveals that your name
is "mysteriously abscent".

Igiven all this, it has been determined by many people
that you tend to tell lies all the time. It has become such a
habit with you that you no longer are able to distinguish
between reality and your.own fabrications.

Now, if I sound like I a a little irritated, thats because I am
(and its not even related to you at all). I have just spent the last 4 days
pouring over information I need for starting a small busines, I haven't had
much sleep as a result. Therefore, such childishness as you CONSISTENTLY
display, tends to further aggrevate an already tense situation.

It is because of this that I will simply break off communications,
place you in a kill filter (along with all of your known aliases) and
put paid to your musings on a more permanent basis.

I am done with you John. I'm putting you away (just like
any other toy).

Consider this my parting shot.

Good day.

On the Uniden website it says "Continuous Band Coverage" but on the Canadian site < http://www.durhamradio.ca/bearcat-bc780.htm > it says "Covers 25 to 512 MHz, 806 to 1300* MHz. *Cellular is blocked. Cannot be restored."

Does anyone know which is correct?

I don't really need cell coverage but I am just curios. I am new to the ham/scanner thing. I have had a BC3000 for a couple years that I have played with but I decided to get my ham no-code license and want to get a good radio & scanner.

John-Corky does lie, the extent is what startles a guy. Since I posted the stats so kindly reposted by mark, John-Corky has posted 289 messages and name changed to dodge the killfiles 3 times.

Keep those cards and letters going out to abuse@home.net and don't forget the ARRL. I'll stick with CBing if John-Corky is representative of Ham radio. I would not trust him giving me a test and this OO thing. I read about it at www.arrl.org. It is nothing but a volunteer postion. Mackey didn't earn it or get honored by it. Volunteer, take the test, pass and you are an OO. Any person can be an OO, but John-Corky proved that.

In article Eric Oyen <n7zzt@home.com> writes:
>Listen up John,

He can't his mouth is still open airing the gap out.

>FACT, in September of 1992, Bill Cheeck was elected
>by ops council as head of scannradio fidonet forum.
>within 2 weeks, you had made such an uproar, that you
>were asked to leave. You refused, and were therefor banned.

I can verify that. Also John-Corky's BBS that carrie Fido agreed with the ban.
Fred Hatfield also a moderator at one time banned Mackey.

>Fact, within 2 months, you appear on the internet
>USENET berating your situation, blaming Bill cheeck for it all
>and generally making an ass of yourself. Since then, you haven't
>shut up.

He stalked Bill Cheek until his death.

>FACT: you continue to deny your actions, even after you pulled them
>on others IN FULL VIEW of the usenet public.

John-Corky is the example of thriving on negative attention. He has nothing to
offer, no expertise so must be disruptive to get the only attention availble
to him. Most people get over this at the age of three or four years old.
John-Corky is a slow developer.

>FACT: Dejanews has full copies of all your exploits dating
>back over 8 years!

It seems to only show Mackey-Corky back 6 years. He will use this one point to
focus on though. No denial just diversion.

>FACT: in the last 2 months, you have posted a sum total
>of 672 times, with only 5 articles ON TOPIC for any of the usenet
>groups you posted to.

That is quite generous on your part. I couldn't find but 2 and they were
mindless.

>FACT: you claimed to have degrees, yet a check of the online
>databases that carry such information reveals that your name
>is "mysteriously abscent".

If John-Corky had anything he would have posted a binary of the group by now.
John-Corky is a nothing. He is a VE and a OO and the PR for the jr high PARG.

That is it. Other than that and 400+ messages of BS a month, John-Corky is nothing.

>Igiven all this, it has been determined by many people
>that you tend to tell lies all the time. It has become such a
>habit with you that you no longer are able to distinguish
>between reality and your.own fabrications.

He knows he is a lie. He wakes up in the morning knowing he is a loser and goes to sleep feeling the same way. The boy is ignorant. A Buffon. A lie.

Timmy

>
> Does anyone know which is correct?

According to the two-page advance brochure, the latter is correct.

See http://www.scannersunlimited.com/780xlt.html

But it's worth noting that as far as Uniden is concerned, a scanner that
has the whole range minus cellular could be called continuous coverage
as it's not legal for them to make a cell-capable scanner in the U.S.
Personally, I would say that not having the UHF tv band would exclude
calling it "continuous." Anyway, I've seen no indication they plan a
call-capable version for other markets, but then again, the 780 is still
a ways from being available.

Baby monitors use the 49 MHz range, not 457 MHz.

To program the search limits for search bank 6, for
example, press:

Program
6
Limit
457.5125
Enter
Limit
457.65
Enter

To search, press the up or down arrow key,
then the 6 key. Select the step size you want.

> > Thanks for the help.

Just my opinion....

I currently own couple these hand held scanners like:AOR AR-2700, 8000,
8200, 8200Mk2, Yupiteru MVT-3300, 7000, 7100, 7300, 8000, 9000, 9000Mk2,
9000Mk2 M3.5 (and couple scanners from uniden and others ;)

In that scanner family i like mostly MVT-9000Mk2 M3.5.

In MVT-9000 i like:

-BAND SCOPE, its still only hand held scanner with real time scope with
audio! =)
(cant tell how much i like it, its also fastest way to go active
frequency when its show in scope display when use it in marker mode)
-Its fastes scan/search of Yupiteru/AOR models (only in modified model)
-It perform HF band far better than any AOR handheld model.
-Its intuitive to use when you're familiar with it, much easier than AOR
and when your familiar with any Yupiteru scanner you can play with all
of them.
-Overall receiver performance, it beat AOR in my home where i have
"little" problems with pager's ect.
-Its more sensitive than AR-8200Mk2
-internal shielding (its made proberly and is reason if relative big
weight)

-it still have tunign knob
-built in speech inversion decoder

What i dont like in MVT-9000:

-It eat too much current (operating time with original battery's)
-its relatively heavy
-Original antenna (its best to throw away)
-computer controll is missing
-slow internar battery charge

In AOR-8200Mk2 i like:

-Size
-backlight (its after all good, in old version what was poor)
-computer controll (original software is poor, Gommert made better)
-Reaction tune cabablity

In AOR-8200Mk2 i dont like:

-It eat too much current (about 2 times what yupi use)!!!!!
-Programming without computer.
-Receiver (specially its poor in HF)
-internal shielding
-Frequency accuracy (even it have TXO)
-thumbwheel (i miss tuning knob what is in Yupi/AR-8000)
-rocker switch sensitivity
-irrating click-click-click-click sound when tuning (noticeable in
SSB/CW/AM)
-complex use
-slow internar battery charge

Overall i choose MVT-9000Mk2 with M3.5 mod a winner.
Its not all what i want but its nearest of that ;)
if i want "perfect" handheld, i have do it my self, but its far too
expensive and complex, so i have select one of those what is avalable in
market. 8-D

These are just my thought's and are based my experience with these
scanners.

Hope this help you folk's

Regards
Mika

I currently have the Pro 2067 scanner and I really enjoy it a lot more than I did the old Pro 92 that I had. I have not had any problems trunking the sytems that I had with the Pro 92. I have not had one single wobble of the software. As a matter of fact, I am fixing to purchase two more of the Pro 2067 for the wife's car as well as for the home. I would highly suggest you pick one up as soon as possible. Plus they are on sale right know from Radio Shack.

Message-ID: <4VTp5.122$t54.63858813@typhoon.cei.net>
Source record: 81158

Jim,
The display works somewhat like your weather radio. First, you have to press the function button then the wx button to get into the S.A.M.E. mode. What that does is, it puts the radio in the standy monitoring the weather for the same tones and codes. When your scanner receives those tones and codes it displays what the warning is, (I.E., Tornado Warning, Severe Thunderstorm Warning or Watch, ect.) but it does not state for what county or the time remaining or anything else. Also, while you are in this mode to receive the same messages and display, you cannot monitor anything else. So, if you wanted to listen to the local agencies, and still receive the same messages, then you cannot. Maybe that makes heads or tails out of that. If I can be any further help, please let me know.

4555. Ottawa County, Ohio - Trunking?

Newsgroup: rec.radio.scanner
Date: 2000-08-26 00:00:00 UTC
From: Mike Mayer <mayermh@ix.netcom.com>
Message-ID: <8o9485$2ra$1@slb1.atl.mindspring.net>
Source record: 81161

Does anyone have experience with the Ottawa County, Ohio, trunked system? There are 5 frequencies, and they use the Ericsson system.

Have a trunk tracking RS PRO-94. Programmed it OK, however it appears that the Ottawa system's transmitters are always on (i.e, the signal strength remains the same whether there's audio or not).

Wondering if this is yet another way of defeating scanners with trunk tracking capability - i.e., forcing the scanner to stay locked on the dead carrier (until a portion of a conversation just happens to fall on that stalled channel, then you can hear them talk, then when they are done, it goes back to just a dead carrier). This "dead carrier" appears on all 4 voice channels (the fifth of course, is the control channel).

Thanks for any clues...

Mike

You can find the CFR (Code of Federal Regulations) here:

http://www.access.gpo.gov/nara/cfr/cfr-table-search.html

BUT: Be aware that the 'emergency' clause does NOT ALLOW you to transmit on unauthorized freqencies outside of flat out serious threat of DEATH.

People who have tried to claim that clause have been fined, lost licenses, etc. The FCC does NOT intend, nor will it allow, you to modify ham gear to transmit to the cops because you're lost.

I believe one approximate quote from them on this was 'Their boat better be ON FIRE to claim this'.

Note that if other means are available of communication, the clause is also not valid.

If you're looking for the wording for Amateur Radio Stations:

Sec. 97.403 Safety of life and protection of property.

No provision of these rules prevents the use by an amateur station
of any means of radiocommunication at its disposal to provide essential
communication needs in connection with the immediate safety of human
life and immediate protection of property when normal communication
systems are not available.

For sale to a good home. Like new Kenwood R-5000. One owner. Very low
mileage. Great condition.
This is the basic R-5000 package with all the standard filters and options.
With owners manual.
This is the same radio type that is used all over the world in embassies and
government facilities for world band monitoring of the shortwave bands. I am
selling this rig because I really have two of them and this was a spare to
be used in a future project that never worked out.
Original purchase price was about $1000.00 US. Asking $600.00 or best offer.
Contact: R-5000@circle-kay.com

I wouldn't count on Mackey honoring such a noble plea. His drivel has been an infestation in newsgroups such as ours for years. He probably holds the #2 record for net abuse complaints in Usenet history. I have no information that would indicate that Mackey has ever been involved in the fire service. His efforts at slandering Blake Bowers, who has been a legitimate, welcome and thoughtful poster to this group are well known, and appear to be the start of his cross-posting to alt.firefighters.

Mackey has been asked, both publicly and privately, to refrain from spewing his venom in this group.. To no avail. Mackey is a type of "anarchist", who lives to create disruption and disharmony in innocent groups. Most of us simply put him in the "kill file" long ago, so we never even see his postings.

Mackey is an abomination in my opinion. As an amateur radio operator, his antics represent everything that I became a licensed "ham" to avoid. But, nothing we say or do will keep him out for good. He'll lay off for a while, and then return. If we get his ISP canceled, he'll get another. Sadly, the only practical option is to ignore him. As you are using Free Agent as a news reader, filtering him out should be easy.

While often misquoted and misunderstood, here could be the rule you are talking about.

ï¿½97.405 Station in distress.

(a) No provision of these rules prevents the use by an amateur station in
distress of any means at its disposal to attract attention, make known its
condition and location, and obtain assistance.

(b) No provision of these rules prevents the use by a station, in the exceptional circumstances described in paragraph (a), of any means of radiocommunications at its disposal to assist a station in distress.

This comes from the Ham Radio rules part 97. YOU can find it here:

http://arrl.org/field/regulations/news/part97/

I won't get into the mess this rule has caused, but it ONLY applies to an Amateur Radio operator using frequencies in the Amateur Radio bands. What this means is that if you have an emergency and are a ham radio operator you are not bound by the class of license that you have on the frequencies you can operate but you still must stay in the Amateur band.

This DOES NOT MEAN that you can switch over to say the local fire department frequency and transmitt to them if you are not a fireman.

If you do see a real emergency and feel that you must use a radio to transmitt on that you are not aurthorised to use, my advise is to report the emergency and then do not try to take any credit for calling in and denie everything.

4571. F/S pro 2006 like new in the box

Newsgroup: rec.radio.scanner

Scanner is a 10! Unit works and looks perfect with a bright display light. Scanner has been barely used by me. You could not tell this from new. Scanner has been cellular modified at the place of sale. Includes: scanner,box,manual,original antenna and car cord. Item will be packaged like you bought it new. $285 shipped for this PRISTINE scanner. Interested parties should reply with their name address and phone number to reserve the unit and consider it sold. thanks Bruce

4572. Re: S.A.M.E. weather alert on Pro 92/1067 and Pro 94/1052

He has both published editions and on floppy disk. No longer does a print edition of all cities/counties...it got too big and too many changes too frequently.

You can get regional booklets though...I prefer the disks...I can go in and make changes as they occur..

Anyone with a radio is SPYING on them? Wonder what the hell that means. Absent any interference, traffic obstruction, or disturbance, what could be illegal about watching what the police do...whether you're carrying a scanner, a loaf of bread, or taking your dog for a walk. They gonna cite people for LOOKING?

Here's a recent article about an enlightened police department in Califonia from the Marin Independent Journal, 8/18/2000:

Robbery could lead to life terms

By Con Garretson

The two suspects in dramatic robbery of an Old Navy clothing store in Novato have extensive criminal histories and could be sentenced to life in prison if convicted on new criminal charges filed yesterday, prosecutors said.

Sharon Brewer, 40, and Edward Jerome Jones, 45, both of Oakland, were arrested at gunpoint on the side of southbound Highway 101 after taking $682 worth of merchandise from the clothing store in the Vintage Oaks shopping center, authorities said.

Bewer and Jones have two prior felony convictions that count as "strikes" under California's "three strikes" sentencing law. As a result, convictions in this new case could result in sentences of at least 25 years to life, according to Marin County Deputy District Attorney Linda Witong.

Brewer was arraigned in Marin County Superior Court yesterday on charges of robbery, commercial burglary, grand theft and additional legal enhancements based on her criminal history, including convictions for grand theft, attempted robbery and robbery using a gun in the early 1980s.

Witong said Brewer also is on felony probation for a theft conviction in February and a conviction on the robbery charge could result in a 30 years-to-life sentence for her.

Jones was arraigned in court on charges of commercial burglary and grand theft, as well as additional criminal enhancements for a criminal career that includes three bank robbery convictions in the 1970s and 1980s.

All of their prior convictions took place in the Bay Area, Witong said, but none of them were in Marin.

Witong said bail was increased to $650,000 for both, from $50,000 for Brewer and $300,000 for Jones.

Police said the two suspects placed several shirts in a shopping bag and tried to leave the store without paying for the merchandise at about 3:40 p.m. An employee confronted the pair, a scuffle broke out and the suspects fled and jumped into an older model yellow Mercedes, witnesses told police.

A tip from an alert citizen led to their capture.

"We had a great citizen who helped us out," Novato police Capt. Reggie Lyles said. "This guy was in his car listening to his (police) scanner and he observed the car. He got on his cell phone and told us our suspects were headed southbound on Highway 101."

"We were really blessed that he did that. It just speaks to why our community is so safe, because we have such solid people like him out there."

Lyles said his officers have been "especially sensitive" of potential crime activity at Old Navy in light of at least half a dozen thefts there in the past four months.

Three weeks prior to the arrest of Brewer and Jones, another person was arrested in her car with merchandise stolen from the same Old Navy.

Eboni Camille Thomas, 23, also of Oakland, was charged yesterday with grand theft in that case, Witong said.

Thomas was arrested on July 26 on suspicion of grand theft. Another woman driving her car pulled into the path of another car on Rowland Boulevard, resulting in a minor injury collision, police said.

Witnesses told police Thomas was seen running out of Old Navy with 36 shirts, which were later valued at $764. The shirts were found inside the would-be getaway car but there were initially problems establishing a criminal case against Thomas, police said.

However, Witong said further investigation revealed sufficient evidence to charge Thomas with felony grand theft. Thomas has been out of jail on $10,000 bail since the day after her arrest.

After Thomas' arrest, an Old Navy employee said the recent crime spree at the store was not coincidental but was tied to a "huge (crime) ring" targeting the Novato outlet based on knowledge of that store's security practices and the retail chain's merchandise return policy.

Message-ID: <NhEp5.90181$oj6.1795104@news1.rdc1.tx.home.com>
Source record: 81234

Just in case anyone is interested, the new Radio Shack catalogs are out. I asked for and got 2, one for home and one for the office. They are also giving away "Cat Optical Readers" that connect to your PC via the keyboard port. It seems that Radio Shack has put bar codes in the catalog. Simply scan the bar code and it takes you to the product listing at RadioShack.com. I have not tried it yet.

For the anti-Radio Shack crowd, not flames please. While I realize that it's not the best electronics source, they are there when you need something in a pinch.

Why when you program certain ID in your list and when you scan in the closed mode you still receive all ids in that bank. I thought when you program a list and are in closed mode you only receive those ID you entered.

4589. Pro 2067 - is it a keeper or not?

Newsgroup: rec.radio.scanner
Date: 2000-08-26 01:16:13 UTC
From: Jeff Adams <jeff.adams@gdfeg-es.com>
Message-ID: <ri6eqsovsnrrkm06skktv4i1f669evg08d@4ax.com>
Source record: 81238
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I bought mine the day they went on sale, and I have only one more day to decide whether to keep it or return it.

I live in Sunnyvale CA. I have a discone only about 6 feet off the 2nd floor roof of my house, with about 50 feet of RG-8X coax (about the thickness of RG-6). With an AR8200, BC895, Pro-2042, and SC-200, I get a LOT of intermod or other interference (very LOUD bleeps and bloops that sound pager related), mostly in the 4xx MHz range. With the attenuator on (except for the attenuatorless 895), things cleaned up fairly well but there is still an occasional blast of pager noise. I can hear Alameda county just fine with all radios (including the 2067). I _think_ it's about 15 miles across the Bay to Alco, but I'm not sure where they transmit from, so it may be a little more or less (someone else could comment). With the 2067, I get marginal reception of Oakland (EDACS system about 15 -25 miles away). The 8200 and 895 receive the Oakland frequencies about the same, so I can't say the 2067 is terrible here.

Things I don't like so far? From what I consider most serious to things that are more a matter of personal preference:

- When receiving Oakland (a fairly distant EDACS system), the display flashes annoyingly between the "scanning" status display and the "receiving a signal" status display. Since the reception is marginal, it really hops back and forth a lot and is very annoying; I like the way the 895 displays status while scanning a trunked system better than the 2067.

- In open mode on a trunked system, it doesn't always display the talk group ID (it does in closed mode - this appears to be a confirmed bug based on other people's reports on Strongsignals). Maybe most people don't scan in open mode, but I do a lot and this is annoying.

- Incomplete frequency coverage! Boo! What about Mil Air?

- Fairly slow scan rate means with most of the 500 channels programmed, the revisit time (the time it takes to get back around to a specific channel) is pretty long. Why is this GRE radio slower than the GRE-built 2042 (and perhaps other older GRE radios)?

- Priority apparently doesn't work while scanning trunked systems (I have not confirmed this but I think that's what the manual says). What's the point of having a priority function then (unless you're using it as a conventional only scanner)?

- We need 20 banks on these radios, not 10! At least for me, in a very busy area, I have to group stuff together in a bank and then lock out channels. What a drag. Of course, the 780 is only going to have 10 banks too (boo!). And to make matters worse, I've read other people's reports that you can't put any conventional freq's in a Moto trunked bank, so if your Moto system has only (say) 10 channels, you waste 40 channels in that bank. I'm not sure if this is true or not (haven't tried it myself).

- No scan lists

- No S-meter! I've really gotten used to having this!

- No "VFO" knob for changing parameters/tuning/etc.

- No backlit keys

- New reports seem to suggest (although I don't have the equipment to verify) that the wrong talkgroups are sometimes displayed (perhaps in cases where certain status bits are set)

- There don't appear to be any memory management functions at all (except thank goodness you can't enter a duplicate talk group ID) - there is no duplicate frequency check, there is no channel copy, etc. I know I'm just supposed to buy the software, but, this is the _first_ GRE radio I've ever
seen that didn't at least have duplicate freq. check! Yuck!!!! My 2042 is _way_ better in regards to memory management! Of course, once you have it all set up, this doesn't matter a ton.

- Display too small (maybe I'm just getting old, but it's hard to read at night without my glasses on!). And to me it's distracting. Since everything is the same size (this is a dot matrix type display as opposed to a custom masked LCD), I find it hard to focus in on the information I want to see when it stops on a channel. This is purely subjective though.

- Have to set the squelch _very_ carefully to acquire control channel

- VHS desensitization problems (have to turn attenuator on all 14x-16x MHz freq's)

- What happened to the "sound squelch" feature of past GRE units (for conventional channels)?

- Tiny buttons

- Don't like the alpha entry method (too many button presses - but this is purely a personal thing)

- No dimming capability of the backlight (too bright at night as a base station by a bed)

- Doesn't remember it's last state when powered off - when turned on, it goes to "manual" mode. What are the odds you really wanted to be in manual mode on channel 000? Not a huge deal really, just an annoyance.

- AC hum: could be the power supply I'm using, but this has been reported by others. I couldn't hear it with the built in or an external speaker but when I plugged in headphones, it was really noticeable.

- no wideband FM mode (OK, this is pretty weak, but the baby monitor we have has more FM deviation than the 2067 can handle without distorting. There's never been a problem with audio on anything else I've listened to).

Things I do like so far?

- Tiny size (yeah, contradicts my button complaint, but gives me more room on the night stand)

- Great immunity to interference!!! (on 4xx MHz - have problems in the 15x MHz region, have to use attenuator to get proper reception - I assume this is the desense problem I've heard people talk about).

- I can finally (on conventional banks anyway) label a bank something like "San Jose PD" then use descriptive channel labels like "West Side 2" or "Car to Car 1", then when the radio stops, I see two lines of text labels (the 8200 doesn't do this - Arghh!). Except if you enable P/L, then you lose the bottom line to the PL frequency - RATS!!! but I've found I don't need PL to help reduce interference so far.

- 800 MHz sensitivity for me is OK. It's no worse than my ar8200 or BC895 (that may or may not be saying much). I don't understand why mine seems OK in this regard yet so many other people's 2067's aren't. Is there really this much sample-to-sample variation?

895 vs 2067 Trunking Comparison

I compared the 895 and the 2067 on two different Motorola Type II systems - Santa Clara and Alameda County (ALCO). Santa Clara is a smaller less active system (fewer frequencies, less activity). The 2067 and 895 tracked _identically_ on Santa Clara (although it was not uncommon for the 895 to start playing a conversation a second or so ahead of the 2067 - not always, but maybe 20% of the time).

Comparing the 2067 and 895 on ALCO was a different story. The two radios sometimes displayed the same talk groups and sometimes different talk groups (when they were different, if I pressed "Scan" a few times on the 2067, it eventually landed on the same talk group as the 895 - I didn't try the reverse).

I don't think you can say that one was right and one was wrong. ALCO is a very busy system. It's just like if you run two scanners scanning conventional channels - at some point, they get out of sync and follow different activity. Without a better understanding of how the control channel data stream works, I can not say that the 2067 did any worse than the 895, only that it was different. In fact, I would bet you that if someone were to put two 245's or two 895's side by side and let them trunk track a busy system, they would display different

activity (I could be wrong, but I think it's a reasonable assumption).

As I said in a previous post, it could well be the scan rate difference (25 cps for the 2067 vs 50 to 75 cps for the 895) is what makes the difference. And how does the radio decide (when there's several different talk groups active) which one to pick? Perhaps the software algorithms for this are different...

So, there's a whole bunch of rambling... It seems to me that the 2067 performs OK, but it has a few too many negatives to keep it. Mine is went back today. Now I just have to figure out how I'll last until December for the 780 (if it even arrives then). What are other people that bought this radio when it first went on sale going to do???

Despite my negative sounding review, I'm sad to have returned it. For those of you who are considering it, please don't take my comments as the sole reason to not buy it. Many of my complaints were more subjective (e.g., the alpha entry method, size of display and buttons, etc) than objective (e.g., actual performance such as sensitivity and selectivity). And as I've said before, the performance seems adequate (but I won't dispute others' testimony of trunk tracking difficulties since the only thing I have to compare the 2067 against is the BC895).

For some of my complaints, a new software version (or minor hardware tweak) may make things better. For others (like the size of the display, lack of backlit keys, etc), a new model will almost surely be required. I fully expect that at some point in the future that GRE will build a more formidable competitor for the 780, but the 2067 just isn't it (that of course is based on the huge assumption that the 780 works as well as we're all hoping).

I anxiously look forward to Rich Wells' upcoming review at www.strongsignals.net, as well as Bob Parnass' review in the upcoming September issue of Monitoring Times. Until then, please let's have some more feedback from others that haven't weighed in yet (or anyone else for that matter).

In VERY good condition and already modified for the cell band. The only thing I dont have is the manual but you can download one off of the internet if you need it. I am asking $200.00 shipped anywhere in the continental U.S through the United States Postal Service with insurance.

Money orders only. Email me if interested at

Where do most of you get your scanner frequencies? Also, does having an outdoor antenna help greatly in picking up far away frequencies? Thanks. Mark.

The Puyallup Amateur Radio Group (PARG) does. Also the Pocatello Amateur Radio Group (PARG) recognizes them. They both have had major articles in their club publications. I belong to both. General Electric I believe sponsor a Missouri PARG Radio Camp this year. Don't you keep up on this stuff John-Corky??????

Now publish your member list or shut up.

The initial assault was planned on Bush's watch. When Clintoon took
over, nobody changed the plans or (apparently) bothered to let the new
administration know about it.

Bush is responsible for the initial assault.

Clintoon is responsible for the final solution.

I've had this radio for 5 years or so. I bought it new. It has worked flawlessly right up till about 3 weeks ago. It works fine in all respects except that if you have the volume past half way, it gives out a squeal. Like microphone feedback. And it only does this in the 800 mhz area. No where else. It seems strange that it only happens in 800 mhz.
Anyone have a similar problem. Thanks for any ideas!

Funny thing, this... it's true...

When I was an OTR Truck driver, I had a dipole antenna for 11M on the passenger mirror of the T-600. I think I was pulled behind the "chicken coop" (Weigh Station for those who aren't familiar with the lingo) at least 8 times, just because the scalemaster wanted to see what kind of contraption I had hanging off my truck... This was usually accompanied by a level 2 truck inspection, as well, and they had the "puppies" out sniffin, too. I didn't mind, really. I usually ran legal, and never carried contraband, and it gave me a chance to step out of the truck, sit back and chuckle at an idiot who thought we was gonna get the bust of the century.

At least it kept a few of the other trucks out of the coop for awhile, while they messed with me for no reason. ::chuckle::

Now aren't you glad they're spending your tax dollars in such a haphazard fashion?

Sounds like what happened earlier this year down around the Flying J
and Pilot truck stops on the south side of Indianapolis. Of course,
myself and a couple other truck drivers caught a Smokey Bear running
some inordinate power behind the McDonald's, jamming channel 19... I
walked up to his police car, and he just drove off. Wonder what the
legality of THAT situation was...

About this scanner business!

Two points. 1 and 2. And a comment 3.

1) Surely the police transmissions are 'scrambled'? Even in this 'little o'l corner' of North America our local police transmissions are! Sounds like Indiana needs some modern equipment! Also sounds like the Indiana police don't read the regulations? I'd love to see that in court; "Now trooper Smith will you please demonstrate how the; 'SCANNER', I think you called it, receives police transmissions". "Oh you don't know how to work it? Well how do you know it's scanner then. Maybe it' a jar of marmalade, or a CD player, or part of a computer ..... .or ..... ?"

2) The title of the posting says "arrested". However the quote of Indiana State laws says something about a "Class B misdemeanour". Can a person be 'arrested' for that? Or just ticketed?

3) Boy oh boy there sure are some restrictive laws in "The Land of the Free"! Can't put up antennas in residential areas, can't 'possess', let alone 'use' a scanner! BTW there appears to be some truth to that comment about some drivers avoiding certain US states; my neighbour who is a trucker has US and Canadian trucking contacts; he mentioned to me several years ago that his 'buddies' say they avoid driving in certain states if they can. Even driving longer distances at the cost of more fuel, or in some cases declining to haul a particular load within a particular area! So I've heard it up here before; as I said, in this little o'l backwater.

Two cents (Canadian): That's less than one and a half cents in your 'real' money!) from here.

Your Canadian Cousin. Eastern Canada.

Actually, the federal premption for hams ONLY
specifies amateur transcievers which have
extended recieve capability. If N9VKS actually
had a scanner in his car, then the law in Indiana
may actually apply to his situation.

Just relating the facts, don't kill the messanger.

Cheers,
Bill K2UNK

Funny you should mention that... My all time record for not having to go thru any chicken coops was 6 months, 1 week, and 5 days. No, I wasn't dodgin the nest, and no, I wasn't just driving at night. Just got lucky, I guess.

Driving's a thing of the past, for me, now, thanks to that DU who was runnin from the cops, hopped the median, and pinned me in my truck for a little over 6 hours. Oh, I might be able to take a local job, but who really wants to deal with shippers and receivers all day long?
::Grin::

Just my two cents.

That's not gonna happen.....trust me on this.

My company sells radios to terrorist and drug smugglers. We sell only
the best seneca systems to our underworld clients. Some companys will
sell ham radios to third world countrys, but that ham gear is cheap and
is not durable in the hands the 12 year old rebels.

Now forget I was here or I will have to kill all of you on this ng.

The only way I will cooperate is when you shut up John-Corky. You are the person posting 400+ off topic messages a month John-Corky. You are the person changing his screen name to avoid the kill files 4 times a week John-Corky. You are the person who adds ham and firefighter groups to the distribution after they asked you to stop John-Corky. Don't reply to my messages John-Corky and all will be well. Don't post your 400 off topic messages and the NG will LOVE that. What ever you do don't blame me for your denial, you are the trouble, you are the liar and the fraud. If you are sincere this NG will never see you post again John-Corky. Do you really think this ploy will save you from losing access with @home after all the messages sent to abuse@home.net your ISP? Nope, you can't shut up. The day you shut so will many others. Until then John-Corky you are just the same liar and fraud we have seen for the last 6 years on here. Only your screen name changes. Who knows, enough letters and the ARRL may Burt Fisher you and removing you from your volunteer positions as VE and OO. Then John-Corky you would have NOTHING!! Shut up or lose John-Corky.

They don't. But that doesn't stop the harrassment and false arrests. Just ask the teenage kid who was stopped in Kentucky a few years back while riding his BICYCLE! The radio in question was a Radio Shack HTX-202 2-meter handheld (which cannot even be modified for out-of-band receive) and the "suspect" was a licensed ham. The radio was confiscated and charges were filed against the teen.

But is apparently now being used by police to harass ham operators.

For the record, I travel extensively. When given a choice of two or more equal routes, I will not travel through either Indiana or Kentucky because of their restrictive, intrusive scanner laws. That means they don't get my gas taxes, sales taxes, motel taxes, etc., because of their attempts to interfere with my right to receive radio signals within their jurisdiction.

Hello everyone, I just seen this post about this particular ham being arrested for having a police scanner in his automobile. Considering that I live in Indiana and go under the call of W9SUN which is my FCC assigned call sign for usage in the amateur service, I would like to make a few comments. I have read the law from the state of Indiana regarding possession of a scanner. It is not illegal for an amateur radio operator to possess a scanner in the state of Indiana and use it in a mobile setting. The key to this is that state law says that an amateur operator who has been granted a license from the Federal Communication Commission can possess one as long as they are a current FCC licensee. As for myself, I often carry a scanner with me whereever I go just for the hell of it. Anyone in Indiana can have a scanner in their house but in a car is a different story. For you to be able to activate a scanner in a car you must have either approval according to state law or something like being an Amateur Radio operator. So I think what this really comes up to is that either he was doing something else illegal or just a dumbnut officer who didnt know what was going on. Stuff like this needs to be checked out by the ARRL and the FCC and the locals and state officers need to be informed of the laws, not just make arrests based on possession. Its about as silly as being stopped for having an antenna, I guess that maybe they think people are using police radios. It would be that a 2 meter antenna would be very close in frequency to the police bands here locally. Down below I will post the actual law as found in the Indiana Code. So I think that this is either regarding to other illegal activity or just a cop that didnt know his head from his rear. Thanks for your comments.

IC 35-44-3-12
Sec. 12. (a) A person who knowingly or intentionally:
(1) possesses a police radio;
(2) transmits over a frequency assigned for police emergency purposes; or
(3) possesses or uses a police radio:
(A) while committing a crime;
(B) to further the commission of a crime; or
(C) to avoid detection by a law enforcement agency;
commits unlawful use of a police radio, a Class B misdemeanor.
(b) Subsection (a)(1) and (a)(2) do not apply to:
(1) a governmental entity;
(2) a regularly employed law enforcement officer;
(3) a common carrier of persons for hire whose vehicles are used in emergency service;
(4) a public service or utility company whose vehicles are used in emergency service;

---
(5) a person who has written permission from the chief executive
officer of a law enforcement agency to possess a police radio;
(6) a person who holds an amateur radio license issued by the
Federal Communications Commission if the person is not transmitting over a
frequency assigned for police emergency purposes;
(7) a person who uses a police radio only in the person's dwelling
or place of business;
(8) a person:
(A) who is regularly engaged in newsgathering activities;
(B) who is employed by a newspaper qualified to receive legal
advertisements under IC 5-3-1, a wire service, or a licensed commercial or
public radio or television station; and
(C) whose name is furnished by his employer to the chief
executive officer of a law enforcement agency in the county in which the
employer's principal office is located;
(9) a person engaged in the business of manufacturing or selling
police radios; or
(10) a person who possesses or uses a police radio during the normal
course of the person's lawful business.
(c) As used in this section, "police radio" means a radio that is
capable of sending or receiving signals transmitted on frequencies assigned
by the Federal Communications Commission for police emergency purposes and
that:
(1) can be installed, maintained, or operated in a vehicle; or
(2) can be operated while it is being carried by an individual.
The term does not include a radio designed for use only in a dwelling.
As added by Acts 1977, P.L.342, SEC.1. Amended by P.L.162-1994, SEC.1.

:>I mean, did the guy want to make a case out of this or was he just an
:>idiot who told the policeman, "look at my shiny new handheld, it can
:>even pick up police signals"?
:That is NOT illegal!!
:The key word here is the word "incidently".
:This is an AMATEUR RADIO that INCIDENTLY recieves police signals.
:Scanners are NOT protected!!!!!!!!!!!!!
:Amateur Radio's in the possesion of a licensed Amateur's ARE.
:And whether it is or is not considered a scanner or is an AMATEUR
:RADIO is also up to the FCC not the local hicks!

The Indiana Code exempts all radios, to include scanners, if one has a ham license, a GROL license, if one is a police officer, a fire fighter, works for the government, is a news reporter. Total exemption except for being able to transmit. And some agencies, like the one I work for, are allowed to transmit on all police frequencies.

:> I have been stopped by Indiana police because of the ham antenna on my car,
:> but was always sent on my way once I explained that it was a ham radio and
:> showed them my license.
:
:I was approached once for this in the Steak 'N Shake parking lot in
:Valpo (the officer heard the radio in my car). I told him that he had
:the choice of arresting me (I wouldn't sign a citation, if one was
:written) and having this go through court, or of spreading the word that
:ham radio operators are legal.
:
:Actually, they have respect for hams, at least in that area (especially
:during tornado season), but it turns out that most ISP officers are
:under the impression that hams are required by law to have our calls on
:our vehicles. Seeing a Camaro with an unusual antenna (I use a Metz),
:no callsign displayed, and hearing what sounded like police traffic (it
:was actually Civil Air Patrol) got his suspicions up.
:
:This led to a 10-minute lecture for he and some of his buddies on
:amateur radio, and how to tell the difference between a ham antenna and
:a CB or scanner antenna -- and on the different series of callsign
:(their eyes glazed over for a bit when I explained that not all calls
:start with W or K, and how many different callsign formats there are).
:
:The word DID get around, I guess -- ISP guys I don't even know wave at
:me all along that stretch of road.

I am wondering if it is a state cop that is in my military
intelligence unit. He is terrified of signal intelligence, especially
that individuals might be able to listen to cell phones. Too much
training yet no understanding.

The WACO assault by the BATF was entirely in the Clinton
adminstration. If you are saying that the laws that were used
as an excuse to justify the original raid were in place during
the Bush adminstration - those laws were put in place in 1934.
And that adminstration was democrat.

(thank you Elliot Ness - BTW he died a drunk)

Greetings group,

To all of you who have been adversely affected by the proliferation of digital public service radio systems, please read the following. I hope that this is not just another rumor or wishful thinking. Let me know what you think or if you can confirm this information.

Regards
Mark

I'm forwarding this information along to P-25 participants. I found it quite interesting.

Hello all,

I have had two scanners including the Radio Shack Pro-29 60 Channel Scanner that I have now. I paid about $150 for it and was wondering what scanner I could buy that would have trunking capabilities and have AM and FM? This scanner I have now isn't bad, but there are a lot of bands that I can't pick up and it is kind of irritating. By the way it is a UHF/VHF Hi-Lo-Air 800Mhz. Thanks for all of your time and help in advance. Mark.

If any reparations were to be made, it should be between the parties involved. Since everyone involved died long ago, history is set and there is no changing it. As for the American Indian, the unjust actions continue to this day in the form of payment from the government. This payment is not compensation for any previous wrongdoing on the governments part, it is a bribe to keep the American Indian on the reservation, docile and easily managed. To this end, it has been rather effective. The solution to this lies with the American Indian himself, he is the only one who can make his life better. If he continues to except government hush money, things will never improve.

I went back and forth about buying the 2067. I was at the counter twice with money in hand and walked away. After all that I have read about the 2067 and its brother the 92, I was very concerned about its ability to pick up distant stations and its EDACS reception. Here is the deal, I bought it anyway and then realized that:

Since needing a scanner that decodes EDACS and buying one the local sheriffs department quit using EDACS and went to LTR II which no scanner manufacture decodes at this time. So that was no longer a concern. However I have not been sucessfull in setting up a trunk group in any mode as I have been able to find the control channels but not the voice channels or vice versa. (NOT A SCANNER PROBLEM, JUST A DATABASE PROBLEM)

Receiving distant staions is not a problem for me as I tend to concentrate on line of sight stuff anyway due to my geographical location (TUCSON AZ). I did find that using the attenuation function did help with the hissing noise normally associated with low recieve. I attenuated local stations and they sounded MUCH BETTER.

So far, 15 hours in to setting this thing up, I a satisfied. I do highly recommend the software as doing the text setup on 200 channels @ 12 characters per channel is NOT fun. I understand that a bit more control of delays and trunking can be obtained by using the software.

THINGS I LIKE:
FAST PL display
Closed Channel based on PL or DCS (much less interference)
12 CHAR TEXT DISPLAY (ALOT OF INFO)
GOOD AUDIO PUNCH!

THINKS I DO NOT LIKE:
Small buttons
Complicated Trunking setup
No Feet

Not meant as a review but just a bit more info as there is alot of negativity out there on this. This is not to say that in 29 days I might not return it, but so far I really doubt it. We'll see when I get it in the car and hook it up to the whip instead of the discone.

Scott

Keith,

Hello to a fellow Civil Air Patrol member! I almost got stopped in In-
diana near Bluffton. I was aware of the "scanner law" up there, and I
think that was why the guy was following me. I did, however, have my
ham call on the back window. I wasn't speeding, so I can't think of
another reason. In North Carolina, Civil Air Patrol issues specialty
license plates (optional) for members, and I had one of those also. I
saw him talking on the radio as he tailed me and he peeled off after
awhile. I'm sure he was interested in the antennas since I had a 2 meter
and a large HF antenna, too.

BTW, as to thwarting "vulture" wrecker" operators, the local county has
am excellent solution. All county wrecker operators are in the police
database. If the parties involved in the wreck don't specify a parti-
cular wrecker, the county calls a wrecker on a rotational basis. The
computer program moves the companies up the "list". The dispatcher then
calls out the one on top. By rotating them, the local wreckers get
plenty of business, it is fair, and keeps everybody happy.

:If he was licensed and was arrested for a scanner violation then
:the only obvious thing that could be illegal is using the information
:obtained over the scanner for ones benefit or for an illegal activity.

There is another possibility. There seems to be a growing number of
stations that are transmitting "number messages" (string of numbers)
in and around Chicago. You can hear them on 40 metres and 20 metres
in the CW band. I passed a guy up on the Indiana Toll Way who
overloaded my receiver with a CW number broadcast. He looked like he
was from southern Europe and had ham plates on his car.

If this is true, and you must know that there are a number of state
troopers in intel units, then the cops may be looking at hams as a
cover for spying and terrorism commo. Not a great future for us hams.

Hello everyone, I just seen this post about this particular ham being
arrested for having a police scanner in his automobile. Considering
that I
live in Indiana and go under the call of W9SUN which is my FCC
assigned call
sign for usage in the amateur service, I would like to make a few
comments.
I have read the law from the state of Indiana regarding possession of
a
scanner. It is not illegal for an amateur radio operator to possess a
scanner in the state of Indiana and use it in a mobile setting. The
key to
this is that state law says that an amateur operator who has been
granted a
license from the Federal Communication Commission can possess one as
long as
they are a current FCC licensee. As for myself, I often carry a
scanner with
me whereever I go just for the hell of it. Anyone in Indiana can have
a
scanner in their house but in a car is a different story. For you to
be able
to activate a scanner in a car you must have either approval according
to
state law or something like being an Amateur Radio operator. So I

think what
this really comes up to is that either he was doing something else
illegal
or just a dumbnut officer who didnt know what was going on. Stuff like
this
needs to be checked out by the ARRL and the FCC and the locals and
state
officers need to be informed of the laws, not just make arrests based
on
possession. Its about as silly as being stopped for having an antenna,
I
guess that maybe they think people are using police radios. It would
be that
a 2 meter antenna would be very close in frequency to the police bands
here
locally. Down below I will post the actual law as found in the Indiana
Code.
So I think that this is either regarding to other illegal activity or
just a
cop that didnt know his head from his rear. Thanks for your comments.

IC 35-44-3-12
Sec. 12. (a) A person who knowingly or intentionally:
(1) possesses a police radio;
(2) transmits over a frequency assigned for police emergency
purposes; or
(3) possesses or uses a police radio:
(A) while committing a crime;
(B) to further the commission of a crime; or
(C) to avoid detection by a law enforcement agency;
commits unlawful use of a police radio, a Class B misdemeanor.
(b) Subsection (a)(1) and (a)(2) do not apply to:
(1) a governmental entity;
(2) a regularly employed law enforcement officer;
(3) a common carrier of persons for hire whose vehicles are
used in
emergency service;
(4) a public service or utility company whose vehicles are
used in
emergency service;

---
(5) a person who has written permission from the chief
executive
officer of a law enforcement agency to possess a police radio;
(6) a person who holds an amateur radio license issued by the
Federal Communications Commission if the person is not transmitting
over a
frequency assigned for police emergency purposes;
(7) a person who uses a police radio only in the person's

dwelling
or place of business;
(8) a person:
(A) who is regularly engaged in newsgathering activities;
(B) who is employed by a newspaper qualified to receive
legal
advertisements under IC 5-3-1, a wire service, or a licensed
commercial or
public radio or television station; and
(C) whose name is furnished by his employer to the chief
executive officer of a law enforcement agency in the county in which
the
employer's principal office is located;
(9) a person engaged in the business of manufacturing or
selling
police radios; or
(10) a person who possesses or uses a police radio during the
normal
course of the person's lawful business.
(c) As used in this section, "police radio" means a radio that is
capable of sending or receiving signals transmitted on frequencies
assigned
by the Federal Communications Commission for police emergency purposes
and
that:
(1) can be installed, maintained, or operated in a vehicle; or
(2) can be operated while it is being carried by an
individual.
The term does not include a radio designed for use only in a dwelling.
As added by Acts 1977, P.L.342, SEC.1. Amended by P.L.162-1994, SEC.1.

Oklahoma Highway Patrol and a special drug taskforce unit routinely stop
cars with extra radio antennas (especially mag mount) along I-35 as part of
their interdiction effort. I-35 is a heavily used route for the northward
flow of drugs and part of the profile is the "escort" vehicle with radios to
"sniff-out" the police and warn the transport vehicle. I've been stopped
and checked several times.

However, what happens if ham radio is being used as a cover for spying
or terrorism? Or even drug smuggling??

4669. Re: Ottawa County, Ohio - Trunking?

Well, I'll reply to my own post....

Talked to the Rat Shack guy and he said that it's imperative that the LOGICAL order be followed when entering this particular range of frequencies for the Ottawa County, Ohio system, as shown on p. 205 of the Ohio/Michigan version of the 2000 Police Call (that's the trunking section of the book). This would be for the PRO-94 trunk tracking scanner.

He specifically said that the 800MHz frequencies as listed under the Ottawa County section in the REGULAR section of the book are not in the proper order (they are instead listed in ascending FREQUENCY order, not LOGICAL trunking order).

Well, we put those frequencies in the PRO-94 as they are listed in page 205, and it all works fine.

Mike

:I have one question: why do people allow such a stupid law to be on the
:books? A scanner in the car. A crime? What makes a ham an authority on
:scanners?
:
:I live in California. And been stopped for traffic violations while
:having my scanner with me. I leave the scanner in plain sight. If the
:officer asks me what it is, I tell him. I've been asked about the laws.
:It boils down to keeping your mouth shut about what you hear.
:
:And some people say the Golden State is a bad place to live! Enough
:ranting. Richard

What the cops are now saying is that scanners are being used to spy on
cops, signal intelligence for the bad guys. Plus that ham radio is a
cover for illegal activity. The same things they say about guns,
especially in cars.

Because those enslaved blacks are no longer alive.
Don't even THINK about paying reparations to the
ancestors of these blacks. Its unfortunate but it life.

Where would the decendants of the slaves be today if their
ancestors had not been sold in America? They would be in
Africa, their families dying like flies of AID's, running from
constant civil wars, grubbing in the dirt for food while keeping
a wary eye out for lions. They should consider themselves the
lucky ones.

< http://www.mdstud.chalmers.se/~md2nicke/MISSUPPFATTNINGAR/skalper.html>

scalping,

removal of all or part of the scalp, with hair attached, from an
enemy's head. Although best known as a practice of North American Indian
warfare, scalping was not exclusive to the Indians. The Greek historian
Herodotus attributed the practice to the Scythians, and some western Siberian
peoples and possibly the ancient Persians may also have scalped enemies.

Scalping was not common to all American Indian tribes, and some authors
question its presence in North America before the arrival of whites. The
custom was probably confined originally to a limited area in what is now the
eastern United States and around the lower St. Lawrence, as well as an area
in the Gran Chaco country of South America. The practice spread over much of
central and western North America as a result of bounties offered by the
French, English, Dutch, and Spanish colonial authorities for the scalps of
enemy Indians and sometimes of enemy whites. Many American frontiersmen and
soldiers adopted the custom.

The importance of scalping varied. For Southeastern Indians it was necessary
to take scalps to become a warrior and to placate the spirits of the dead.
Most Northeastern Indians valued captives more than scalps. Among Plains
Indians scalps were taken for war honours, although such practices as
touching a live enemy accrued more honour to a warrior.

Scalps were usually taken from dead enemies, although some Plains Indians
preferred a live victim. The operation was not necessarily fatal, and some
victims were released alive. The scalp was sometimes offered as a ritual
sacrifice or preserved and carried by women in a triumphal scalp dance, later
to be retained as a pendant by the warrior, used as tribal medicine, or
discarded.

I have a Pro-39 with the cell conversion that I'm thinking of selling.
It's nearly mint condition (no box or manual).

What's a fair price for this radio? Any offers or suggestions on where
to sell (I know Ebay is sensitive to the cell mods)?

thanks.

Dale

Wouldn't be the first time that a cop made a mistake. Recently had a
case here in Arkansas in which a state trooper arrested a guy for
giving him a middle-finger salute. The guy won in court, so far, and
the cop was fined $4,000, but they may appeal it later, too.

Got a problem with it.

Get an amateur radio license plate.

Problem solved...

Although, I would sue if I was being harassed for having an antenna on my car.

I went through similar problems in So Cal when I lived their. If you had a CB antenna on your car, and where out after 2 in the morning, you would be pulled over, and your car searched for illicit narcotics, just "because most CBers are drug users in this area".

Sounds like a bunch of local "bubba's" harrasing you and waiting for you like vultures for you to screw up
so they can pay for their news radio's that you won't be able to listen to.
It's amazing how those who have the most protection (guns and ammunition) are those who are in most need
of being taken out of the gene pool. Also, it's amazing that those who need to be monitored the most are those
who are trying to make monitoring illegal.

298 should give you a bit more accuracy.. :-))

When building an Antenna the diameter of the material becomes a matter too. This will take the more effect the higher the frequency is.

A bigger diameter of the antenna material will affect resonance on a shorter length of the antenna giving a broader bandwidth on acceptable SWR also.

4698. FOR SALE: PRO-2052

Newsgroup: rec.radio.scanner
Date: 2000-08-27 00:00:00 UTC
From: akinius@nospam.net
Message-ID: <39a8d960.7971451@news.earthlink.net>
Source record: 81078

Greetings!

Back in January, I made an impulse purchase of a Radio Shack PRO-2052 desktop scanner (model #20-432). I thought it would be cool to have a scanner at home; it has a thousand channels (!), it's a trunktracker, and the computer connectiveity sounded neat.

Of course, I neglected to consider that I only listen to my handheld scanner at work, and I've only felt the need to monitor at home durning emergency situations or civil unrest (can anyone guess I live in Los Angeles?), when the ability to use a scanner hooked up to my computer would be in doubt.

So, I have decided to sell it... I plan on putting it on Ebay later this week, after someone else's auction for one ends. But, I figured if there's anyone out there that wants one we could save some time. It is basically in new condition; I took it out of the box once to look at, then I carefully wrapped it back up in it's plastic, put it back in the box, and put it on a shelf where it has sat until now. It has never been powered up, and natuarally it comes with the original everything. It even has the extra thirty-six month service plan.

This is from the Radio Shack page for the scanner, where they are listed for $369.99: "Follows analog Motorola I, II, I/II, and GE/Ericsson (EDACS) trunked systems. Extended coverage includes 225-406MHz military aircraft band, 220MHz and 1,240MHz Ham bands. Built-in NOAA weather radio alert with S.A.M.E. (no display). Built-in RS232C serial interface permits computer control, uploading, downloading and cloning**. 20 priority channels. Data skip. Search skip. UL listed ac adapter (dc adapter available separately), detachable indoor antenna, nationwide trunked frequency list. Size:2 3/4x8 1/16x7 11/16" (HWD).) **Requires software and cable, available separately."
(http://www.radioshack.com/ProductCatalog/ProductDetail/Index/1,2098,,00.html?SKUString1=20&SKUString2=432)

I got it on sale for $300, plus $60 or so for the three year warrenty, and given that it's basically new in the box, if anyone wants to offer $200 for it we couldl just skip the Ebay auction. Plus shipping, of course. Umm, if I get more than one response, I may just auction it anyway.

Thanks!

There must be more to this story because Indiana, like a lot of
states has an exemption for licensed amateur radio operators. Below is a
copy of the appropriate statute

IC 35-44-3-12
Sec. 12. (a) A person who knowingly or intentionally:
(1) possesses a police radio;
(2) transmits over a frequency assigned for police
emergency purposes; or
(3) possesses or uses a police radio:
(A) while committing a crime;
(B) to further the commission of a crime; or
(C) to avoid detection by a law enforcement
agency;
commits unlawful use of a police radio, a Class B
misdemeanor.
(b) Subsection (a)(1) and (a)(2) do not apply to:
(1) a governmental entity;
(2) a regularly employed law enforcement officer;
(3) a common carrier of persons for hire whose
vehicles are used in emergency service;
(4) a public service or utility company whose
vehicles are used in emergency service;
(5) a person who has written permission from the
chief executive officer of a law enforcement
agency to possess a police radio;
(6) a person who holds an amateur radio license
issued by the Federal Communications
Commission if the person is not transmitting over a
frequency assigned for police emergency
purposes;
(7) a person who uses a police radio only in the
person's dwelling or place of business;
(8) a person:
(A) who is regularly engaged in newsgathering
activities;
(B) who is employed by a newspaper qualified to
receive legal advertisements under
IC 5-3-1, a wire service, or a licensed commercial or public
radio or television station; and
(C) whose name is furnished by his employer to
the chief executive officer of a law
enforcement agency in the county in which the employer's

principal office is located;
(9) a person engaged in the business of
manufacturing or selling police radios; or
(10) a person who possesses or uses a police radio
during the normal course of the person's
lawful business.
(c) As used in this section, "police radio" means a
radio that is capable of sending or receiving
signals transmitted on frequencies assigned by the Federal
Communications Commission for police
emergency purposes and that:
(1) can be installed, maintained, or operated in a
vehicle; or
(2) can be operated while it is being carried by an
individual.
The term does not include a radio designed for use only in a
dwelling.
As added by Acts 1977, P.L.342, SEC.1. Amended by
P.L.162-1994, SEC.1.

The Houston PD deals with this differently. They broadcast the request
for the tow directly over the PD channels to the tow truck. The drivers
listen on the scanner and the first guy there gets the call. The
dispatcher then cancels the request.

Indiana Code, IC 35-44-3-12, exempts hams as well as others from
prosecution over scanners, ham gear or even having a police radio.
The license is something that can be taken away just as the other
classes of exempted individuals may be fired. If the state police do
not exempt hams then they may not exempt volunteer fire fighters or
other police departments. Fiefdoms.

:>I guess hams are going to
:>have to give more money to the legislature to buy exemptions.

The question I keep asking (but no one has answered) is just *how* did
the police determine it was a scanner? I'm assuming that police are like
the general public and wouldn't know a 2 meter handheld from a PopTart.

Is this like the people who grow pot, TELL everyone they are growing pot
in the hopes of getting arrested and making a case out of it?

I mean, did the guy want to make a case out of this or was he just an
idiot who told the policeman, "look at my shiny new handheld, it can
even pick up police signals"?

Not entirely true. Ruby Ridge was before 'Bill' and the blame for it should
lie squarely on the Bush administration. Waco was started under the Bush
administration and was finished under the Clinton administration.

A friend showed me a copy of Monitoring Times last night (I believe it was from May of this year) where in an interview with some government official (can't remember which one) he or she stated that they are beefing up whichever bill it is that outlaws scanning of the cellular frequencies here in the US with heavier fines, jail time, etc... And they're serious about enforcement...

They also went on to say that the government will be paying more attention to scanners being imported into the country by buyers who are trying to circumvent the US scanner laws... They didn't elaborate much on this, other than to say they would be paying more attention to this "loophole" in the law (their word not mine).

Realistically I doubt that anyone ordering a scanner from overseas which is cell capable would have a US Marshal show up at his door and arrest him, but I can see imported scanners being confiscated at the border from now on and the buyer will just loose the money he paid for it. The equipment seized would be used by the government since they are exempt from scanner restrictions.

It would certainly be easier just to 'bite the bullet' and obey the cell phone and cordless phones laws, don't you think?

I was approached once for this in the Steak 'N Shake parking lot in Valpo (the officer heard the radio in my car). I told him that he had the choice of arresting me (I wouldn't sign a citation, if one was written) and having this go through court, or of spreading the word that ham radio operators are legal.

Actually, they have respect for hams, at least in that area (especially during tornado season), but it turns out that most ISP officers are under the impression that hams are required by law to have our calls on our vehicles. Seeing a Camaro with an unusual antenna (I use a Metz), no callsign displayed, and hearing what sounded like police traffic (it was actually Civil Air Patrol) got his suspicions up.

This led to a 10-minute lecture for he and some of his buddies on amateur radio, and how to tell the difference between a ham antenna and a CB or scanner antenna -- and on the different series of callsign (their eyes glazed over for a bit when I explained that not all calls start with W or K, and how many different callsign formats there are).

The word DID get around, I guess -- ISP guys I don't even know wave at me all along that stretch of road.

That is NOT illegal!!
The key word here is the word "incidently".
This is an AMATEUR RADIO that INCIDENTLY recieves police signals.
Scanners are NOT protected!!!!!!!!!!!!!
Amateur Radio's in the possesion of a licensed Amateur's ARE.
And whether it is or is not considered a scanner or is an AMATEUR
RADIO is also up to the FCC not the local hicks!

From the Popular Communications September issue:

There's been a lot of talk lately about exempting hams from state anti-mobile-monitoring laws, but the debates aside, Josh Church, N9VKS of Indiana was ticketed for illegal possession of a police scanner. (No, the words "police scanner" aren't ours, but rather the Hoosier States'). If you've got a tendency to boil over easily, better not read this month's "Tuning In" on page 4, because Indiana bureaucrats don't know a radio from a box of Dole bananas.

I have tried to talk to Mr. Church to get more details of the arrest. I have also spoke with the 1st Sgt of the PAO division of the Indiana State Police. The best I can get from the cops is that the ISP assumes that anyone with a radio is spying on them. No recognition for the public service that hams give (the state's emerency management agency disargees), no recognition that banning scanners is going to cause cops to have to buy units from Motorola for nearly $4000 to do the same function of inter agency monitoring.

Just a fear that the public is out of control.

BTW, I did check. This section of law has only had two appellate cases. And nothing that deals with hams. I guess hams are going to have to give more money to the legislature to buy exemptions.

I have the opportunity to get a 40 foot mast with an antenna attached for free. Since I have little knowledge of antennas, I am asking for input. The antenna appears to be approximately 5-6 feet tall and approximately 1" thick the entire length. Several businesses have used the building that the antenna is attached too, so I believe it was used for 2 way comm. What, if any use will it be for scanning?

In NJ, possession of a scanner in a vehicle was illegal (2A:127-4).
The story goes that a ham was caught with his modified radio by a
knowledgable police officer and charged (Never able to really confirm
this story), due to the ability to receive out of band. But, in 1993,
this statute was repealed and a new law was created. Under the new
law, possession of a scanner radio is illegal if you commit a crime, or
flee from the scene of a crime.

Sounds like time for the amateur radio community to consider some
lobbying in Indiana.

It's possible they will produce a cellular-capable model. This is what happened with the UBC-245XLT, which is the Australian/New Zealand model of the 245XLT. The 800MHz trunking frequencies here (Australia) cover part of the US cellular band, hence the unblocked version for Australia. Since the Australian market has been promised a version of the 780XLT, we could be in luck.

Australian version is basically the same as the US version. It has the 1.04 firmware, no 5 second trunk delay, covers 66-88MHz and the entire 800MHz band (due to the frequencies used for 800 MHz trunking here). And it works quite well!

I am researching VHF / UHF CB radio systems.
I am trying to build up a list of every countries "non-27Mhz" CB systems. I have a detailed account of the UK and Australia but need all the other systems worldwide. I am particularly interested in the US GMRS system, the Swiss 934Mhz band and the Italian 43Mhz band. But would be happy to learn of any others from anywhere in the world.

I need to know
Number of channels with frequencies
Modes allowed
Power allowed
whether a license is required and how to get one
any antenna restrictions
any restrictions on use, i.e. no business, business only etc.
any restrictions on installation i.e. mobile only, hand held only etc
or any other information

Please send any info or URLs for relevant web sites to
axlejack@dingoblue.net.au

Many thanks for your help and happy CBing :-)
Jack

4737. FS: Optoelectronics Optocom Receiver Scanner

Newsgroup: rec.radio.scanner
Date: 2000-08-27 04:10:17 UTC
From: juant2@aol.com
Message-ID: <20000827001017.06823.00004715@ng-cg1.aol.com>
Source record: 81061

I am selling my Optocom. I have not really used it. I bought it thinking I would get into the hobby of scanning but honestly I have not had much time to learn to use the unit. I could use the cash to buy some other things I know I can use now. I do not have the original box nor the Trakstar software. I have the unit, the serial cable, the standard antenna, a copy of the manual and the Optoelectronics utilities software. It is perfectly clean. It is also of recent manufacture with the Bitbanger circuit. I am selling for $375 shipped within the U.S or better offer. The unit will work with many software programs. I am in South Florida should you be local and would like to inspect it. I will send pictures of the actual unit to those who request it.

Juan

Wow... in VA, they cost $1 more than a regular plate. In TN and RI, they cost the same as a normal plate... dunno about other states, but that's where I've lived as a ham... too bad it's not like that in all states..

Sounds like a fun place to drive through after putting every mag mount antenna
you can find on you car, but take all of the radios out.. :)

Imagine getting pulled over with like 5 or 6 mag mount antennas, and they find
no radio inside.

After reading all these messages (and disregarding the paranoid anti-government users out there), I am glad that the state I live in and the states I commonly travel through, do not have laws banning scanners, except when used along with a crime... It seems the NE US accepts scanners more than the rest of the country. I don't usually have a scanner in my car, but I do occasionally bring a 2m HT in the car with extended receive.. I have one antenna that is sometimes on, and that is a CB antenna.. I don't usually even put that on the car unless I am traveling and monitoring channel 19 for traffic reports.

>know,
>>
>>I just got one.
>>

There is a procedure to give continous coverage in the AR1000. It involves
opening the scanner up and installing a "jumper" to erase the old settings.
Then there is a keypad set of programming instructions to give it full range.
Search on AOR1000, I have found it in several different places.

Under U S Law, when a person is detained and given a "ticket",
called different things in different states ("Summons". "Notice
to Appear", "Citation",etc), that person is legally "under
arrest" from the time that the officer decides to charge the
person until the "ticket" is handed to the offender, who
technically is then released on "own recognizance" upon a
specific or impiled promise to respond as specified on the
"ticket".

I am using a discone antenna about 12 meters over the ground and I have very
good
RX-results!!
at 70-80 MHz I can hear even at a cheap handheld scanner stations from about
80 km distance clear and loud!
I can`t imagine living without :-)

The Commission made it clear that it intends Amateurs be able to receive signals. One doesn't have to have a transceiver; a separate receiver is also an acceptable station configuration, and in fact many folks who do weak signal work do use such.

Tonto wasn't speaking Spanish, but his native tongue. He was a
Potawatomi.

And rechecking the transcripts, typo...Tonto debuted on Radio in
episode 10. Named Ranger Reid Kemo Sabe in episode 11 or 12, if I
make out the faded numbers on the pages I have correctly.

In the ITU rules, it's said that hams MUST have equipments to verify
that they do not transmit on frequencies of other public services.
So the only way to do that is to have a spectrum analyzer that can be
done with a wideband receiver with a scope function and RS232 output to
monitor the spectrum.
So, evidently hams have the right to have that type of receiver ...

care to explain this quote then?

>True, there is a lot of material regarding John Mackey archived there.
>However, a search on "Eric Oyen" revealed over 1,000 matches! Some of these
>are real doozies, dating back 4 years or more.

>What's that about the pot calling the kettle black?

you left much to the imagination there... anyone not looking real close
(this woul;d require a telescope) would assume that I posted over 1000
times according to this statement.

Perhaps if you had clarified more (such as, 1000 posts relevant to the name:
<insert name here>, or 1000 postings where the name: <insert name here> is
mentioned).

Proper verbage can sure cut down on assumptions made because the writing
was ambiguous.

I'll give you $100 for it (cost includes shipping). otherwise, you ask too much for modified/used equipment (sorry, just my opinion)

Glenn - You really are a babling FOOL, aren't you??

Glenn, do you want to keep this going? Do you think the NG members would like that? Please TRY to be cooperative for at least 2 weeks.

It is very simple, Glenn, simply STOP your trouble making posts for 2 weeks. Nearly EVERYONE else has except you. Don't you ever get tired to always being the source of trouble?

Once you see how easy it is to be nice for 2 weeks, you might want to do it permanently.

John-Corky

The only way I will cooperate is when you shut up John-Corky. You are the person posting 400+ off topic messages a month John-Corky. You John-Corky are the person changing his screen name to avoid the kill files 4 times a week. You are the person who adds ham and firefighter groups to the distribution after they asked you to stop John-Corky. Don't reply to my messages John-Corky and all will be well. Don't post your 400 off topic messages and the NG will LOVE that. What ever you do don't blame me for your denial, you are the trouble, you are the liar and the fraud. If you are sincere this NG will never see you post again John-Corky. Do you really think this ploy will save you from losing access with @home after all the messages sent to abuse@home.net your ISP? Nope, you can't shut up. The day you shut so will many others. Until then John-Corky you are just the same liar and fraud we have seen for the last 6 years on here. Only your screen name changes. Who knows, enough letters and the ARRL may Burt Fisher you and remove you from your volunteer positions as VE and OO. Then John-Corky you would have NOTHING!! Just another day closer , shut up or lose John-Corky

Analog is still alive and well in the States, but we also have CDMA and can
only hope to get GSM pretty soon. When that happens, the feds ain't gonna' have
anything to worry about until somebody starts manufacturing digital scanners
(I'm willing to take bets on when that'll happen). And although it's now
considered illegal to monitor 49MHz cordless phones and also phone patches on
the VHF ham bands, nobody ever gets into trouble for doing that. Go figure.

I Have tried the free "cat" reader and I works great. It not only works with the radio shack catalog, but you can scan any upc code on just about any type of product and you will be taken to their web site (if they have one).
Pretty soon there will be an additional cord that you connect to your TV set so the TV will give cues to your web browser to go to a web site. I haven't check but It may already be at Radio Shack.

Even though the advertisements all say the software and "cat" readers would be available in September it seems lots of Radio Shack stores must be giving them out along with the 2001 catalogs a little earlier.

All in all it really feels like I am living in the 21st century (wink)

RicK Larson with Corky dripping down his chin gurgled.....

> Glenn
> What is your pathetic count of posts not on topic, all the while bitching
at
> other people for the sameeeeeeeeeeeeeeeReeeaaaaasonnnnnnnnnnnn.

RicK, you need to work on reading comprehension a bit. I haven't claimed to be the newsgroup savior like your luv John-Corky. I haven't claimed to not post 400+ off topic messages. I have made two challenges which you answered with your tail between your legs as you ran away.

> Maybe you are the new NET COP.

Maybe you are John-Corky's wet nurse, ehhh? Rick-Corky, learn to read. I have not started a single one of these threads, only replied to verify claims others made and John-Corky your luv denies. Are you that slow or doesn't mommy read all the words to you?

> John keeps tuggin at your string and you never fail to show your
> infatuation.

No, John-Corky keeps calling others liars when they present the proof he demands. I have just verified a number of claims such as John-Corky being kicked off the Fido Scanner Echo, John-Corky shorting out and ruining a power supply,John-Corky adding to the distribution list for no other reason than to cause trouble, John-Corky ruining a repeater due to not being able to understand polarity, John-Corky swearing, threatening and jamming a repeater in the SeaTac area, John-Corky changing his name 5 times a week, John-Corky holding the USENET recoed for over 400 off topic posts in a month.

No claims, no infactuation, no changing names to dodge the kill files Rick or RicK. If you aren't John-Corky, you must be his twin. You lie and make up facts just like John-Corky.

No claims, not really bitching I hope, just agreeing or verifying the facts John-Corky keeps trying to deny or lie about. Clear enough RicK-Corky or do you need to check with Corky-John before you speak??

If what you say is true John-Corky, if I am the troublemaker, then I will continue to cause problems when you are gone.

It isn't though John-Corky, whenever you leave the silence is golden. Check Deja.com or have an adult show you. No John-Corky, no trouble.

Don't reply to me if you don't like it John-Corky. Is that too complex for your pea brain? BTW, verifying the truth for people you slander and call liars is not considered harassment Toilet-Boy. That too seems too complex for you Toilet-Boy

> I have to leave for two
> weeks
> military training very soon.

Head short arm inspector, right? As in you real life, if you did anything important you would post it like that stupid ARRL binary you put up here. Nope, John-Corky checking for STDs in the National Guard. Not a pilot, not even an officer just a weekend nurse, again..

>Upon my return from training I will deal with
> you.

That's one of the threats you made on the repeater John-Corky. Same old Toilet-Boy after all these years.

COMPLETELY WRONG!!!!

In 1995 (or perhaps early 1996) Ken Storm (the moderator of ScanRadio Fidonet Echo (they don't have "forums") suddenly became missing. As Assistant Moderator, Bill Cheek became Moderator by default. He was NEVER elected to the position of Moderator. The first thing Bill did as moderator
was to kick out several who he saw as a threat or who knew more than him. I was one of those who were kicked out and NEVER told why or given a chance to defend myself.

> Fact, within 2 months, you appear on the internet
> USENET berating your situation, blaming Bill cheeck for it all
SNIP

AGAIN, COMPLETELY WRONG. (or else you are simply lying)

I did NOT appear on the usenet group of rec.radio.scanner until July 1996 when Cheek was in a fully involved war on that group as result of his abusive online actions. Only AFTER this time (July 1996) did I make any public
statements of what had happened earlier.

> FACT: you continue to deny your actions, even after you pulled them
> on others IN FULL VIEW of the usenet public.

AGAIN, COMPLETELY WRONG.

I have NEVER denied the TRUTH of my actions. YOU have failed to present any truthful facts yet!!

> FACT: Dejanews has full copies of all your exploits dating
> back over 8 years!

COMPLETELY WRONG!!

A search of Dejanews shows NOTHING for me under the key search words of "John Mackey" or "KA0SSF" Between the dates of Jan 1 1992 and Jan 1 1995 on the rec.radio.* usenet groups.

http://www.deja.com/[ST_rn=ps]/qs.xp?ST=PS&svcclass=dnyr&firstsearch=yes&preserve=1&QRY=KA0SSF+john+mackey&defaultOp=AND&DBS=1&OP=dnquery.xp&LNG=english&subjects=&groups=rec.radio.*&authors=&fromdate=Jan+1+1992&todate=Jan+1+1995&showsort=score&maxhits=25

Try Traveller and JEMJ. You are such a liar John-Corky, it never ends does
it. You aren't sincere, you just lie on and on causing more trouble.

> > FACT: you claimed to have degrees, yet a check of the online
> > databases that carry such information reveals that your name
> > is "mysteriously abscent".

>
> COMPLETELY WRONG!

You have no degree John-Corky. You wave your silly volunteer OO certificate, even posted a binary of it or your sillt VE certificate. If you even had anything close to a degree you would have posted it. You haven't. All John_corky can say he has done in his miserable useless life is volunteer to be an OO and a VE and posted more than 400+ offtopic messages a month. Proud John-Corky, he has done nothing he can display or talk about. He is nothing.

> > Igiven all this, it has been determined by many people

Not near as enormous as the event if you did John-Corky. You post 10 to 1 compared to anybody in any group John-Corky. That's why you little retard are the #1 offtopic poster.

When are you going to be sincere and shut up Corky?

Glenn

4804. Re: N9VKS: Indiana ham arrested for having a scanner

Newsgroup: rec.radio.scanner
Date: 2000-08-28 00:00:00 UTC
From: "M. Schneider" <markinokla@juno.com>
Message-ID: <Syoq5.5408$_X.20222@newsfeed.slurp.net>
Source record: 80915
Cross-posted to: rec.radio.amateur.misc,rec.radio.cb,rec.radio.scanner,rec.radio.shortwave

Well, one time I was driving south to FW at about 4 AM (I worked nights at the time, so I was awake anyway), this was the time the drug t.f. stopped me. I was asked (in this order) for my driver's license and proof of insurance, why was I out at that late an hour, what was I doing with all the radios in my car and who was I talking to on them, could I prove I was a amateur radio operator and a EMA member, had I ever been convicted on any drug charges, and would I allow them to search my car. They ran my plates and license (the agent who waited by me was annoyed that my radios picked up everything said, and told the other narc to use his phone. I was released with a warning to watch my driving (the first time anything was said about driving).

Another time I was talking on an Okla. City repeater when I passed by what appeared to be an interdiction stop. A marked OHP unit peeled off and caught up with me, then ran my plates before pulling me over. He wanted to know who I was talking to on the radio, if I'd been warning anybody. I explained I was a ham, showed him my license, and casually mentioned I'd been a police dispatcher, and did Lt. So-n-so still work in Dist. 1 (Okla. City, Troop A). After that he became friendlier and apologized for pulling me over. He was the one that explained the radio-equipped escort car profile (later confirmed on TV news reports).

Of course, I don't have A antenna on my car, I have THREE antennas. Dual-band for my ham rig, dual-band for my scanner, and a mono-band for my EMA radio.

Hi !!

Is there anyone who knows about a technincal test/comparison between the ICOM R8500 and ICOM R7100 ?? A would like to know about the receivers technical quality in point of RF-dynamic range, noise-level..... I already have a R7100 but I don't know if I want to lose by the exchange if the R7100 is better than the R8500.....

In Oklahoma it costs $14 for Ham plates, and they give you a second plate
for the front of your vehicle (Okla. doesn't require a front license plate).
This is so you can be identified as a possible communications asset when
approaching an emergency scene (or so I'm told).

He was talking about APCO 25 which is a national digital standard being adopted by MANY police and fire agencies.

Right now, there is NO SCANNER anywhere that can receive APCO 25 digital transmissions. However, they are NOT generally encrypted. So, all you can do right now is wait and hope something is manufactured to listen, OR, by an APCO 25 radio.

If you want to purchase one, please e-mail me direct.

Thanks,

Kevin@rollerskate.net

Subject: Arkansas State Police Going Digital!

Hi Everyone:

Yesterday I had a phone conversation with my cousin who is State Trooper down in Little Rock.
He told me the State of Arkansas is going to completely overhaul their radio system by late 2002.
The new system according to him will use "Project 25" technology from Motorola. The system
will be phased in Troop by Troop across the state. He said the current system is outdated, and they can't add any large number of new users to it.

Will any of the newer Trunktracker scanners from Uniden be able to decode this new radio system, or is everyone like me out of luck? I have a BC-895XLT which does just fine now, but my cousin says it will be useless in 2-3 years.

Thanks,

Glenn

I am not understanding this... as far as I can tell, the only agency in the united states charged with enforcing and making any laws that regard the public airwaves is the FCC... that's why many bans on radar detectors have been thrown out, and why many laws cities levy against erection and construction for towers for ham, cb, etc. has been rejected as illegal.... we should all ban together against this sort of thing, and let the FCC know how we feel; the lack of such lobbying and support is what made monitoring cell phone frequencies illegal.

and before those of you that are about to pounce on me with the remark "well, why do you want to listen to other people's private conversations????" I respond this; I do NOT care to, specifically; rather, it's the principal of the thing... it's in the name of fighting that "slippery slope", where you start allowing some infraction to incur to a limited degree, then nothing is to prevent it's reoccurence a little later, then a little later, until nothing is left... so we have

to start fighting the war on the FIRST front we're confronted with.

anyway, i'm emailing the FCC and asking "what gives" and i think all should do the same. INCIDENTALLY, I am a ham, but I do not think that these exemptions should be given just to hams. We're all american citizens and should be given EQUAL protection under the constitution.

now what is MY .02 worth.

> giving him a middle-finger salute.

Lese majeste! Lese majeste! -- Hang the bastard! We simply _cannot_ have
commoners disrespecting the guardians of the noble rulers! The very
idea!

> The guy won in court, so far, and
> the cop was fined $4,000, but they may appeal it later, too.

Hmmmm -- appeal? Why should they have to appeal? It's a clear case of
Disrespect of Cop, surely a capital offense, to be summarily punished by
death. The fool commoner simply did not know his place. He should have
knelt in the dirt as the King's man passed and offered to kiss the ring!
(er -- badge -- er whatever)

While it may not be "nice" to give anyone the one-finger salute, it
doesn't seem particularly "nice" to have these public EMPLOYEES
forgetting just who they work for either. Even when arresting a
difficult suspect, it's possible to be in control and polite throughout
the effort. I know: I spent a lifetime one year working in a mental
hospital, mainly as "muscle" to restrain violent forensic (murder,
aggravated assault, rape, etc.) patients. Never, ever, had to injure one
to restrain.

And I've never been especially big, 5'8" - 195 pounds.

"The finger" is not a reason to arrest; maybe to laugh at the giver's
level of discourse, but not arrest.

According to the transcripts from the typewriter of Fran Stryker,
in episode one, Tonto, a old boy hood friend of he who became The
Lone Ranger, who nursed the Ranger back to health after the ambush
at Bryant's Gap, told Ranger Reid, when Reid donned the mask, that
he would call him "..Kemo Sabe...it mean 'Faithful Friend'."

The PRO-75 has 200 programmable channels and covers the "usual" freq.'s between 29MHz and 512MHz. It is in great (9.5/10) shape and comes with a rubber ducky antenna and original users manual. I'll even throw in an AC adapter at no extra charge!! Here's the best part: $80 SHIPPED TO YOUR DOOR! For details or questions, contact me at rakolari@cyberbeach.net . Thanks!

Yeah, you'd think the Arkansas State Police must be really on the
ball, if they have time on their hands to arrest "serious" criminals
like this guy. Our state must be pretty squared away if we don't have
any of those minor criminals around. You wouldn't know it from the
record number of meth labs they've busted this year. :/

Eeeeyeah. Special license plates in New York State are $150 extra each year. Amateurs too. Not really an option for most.

I still have a problem being stopped by the police just because I have the wrong length antenna on my car. The Supreme Court gave these guys powers to search vehicles on the slimmest of pretexts.

For awhile around me the cops were monitoring CB channel 19 and whacking folks that warned oncoming traffic of the speed traps. They found a hooker ring operating around one of the truck stops running on 19 too.

I got most of mine by doing searches of the likely bands. (does your
scanner have a search function? I wouldn't own one that didn't) Some
came from books and published frequency lists. If you are in Australia
(I am responding on an AUS group) try Dick Smith's. they used to put
out a book on the hobby of scanning.....lots of suggestions and leads.
The Australian Communications Authority has a website with the
complete listing of frequencies and a search facility. Radio and Comms
magazine is a good place to find ads for published lists.
As for an outside antenna......a definite must to get the full benefit
of any scanner.
All the best.

Brian W Edginton

I once resolved to order my life by following my own
advice to others.
But I had to give it up as there was too much of it.

Something I'd like to see repeated happened back in 1966. I was the
chief engineer of a commercial radio station and had been at the FCC in
Buffalo, NY several times over the previous two years obtaining my
amateur extra, commercial telegraph 2nd (too young for 1st), and 1st
phone ticket as well as endorsements. I had to take my pre-induction
physical and stopped by the FCC. The engineer in charge of the 20th
radio district (and I wish I could remember his name) asked me how it
was going. I mentioned to him that my father had been ticketed for 1
mile per hour over the speed limit - and the guy started laughing!
Literally, the tears were streaming down his face! He apologized and
explained - one of his men had been stopped the week before in a
similar town (where most of the income was from traffic tickets). Back
then, two police cars were involved - one with the radar set up on a
wooden tripod and the other was the chase car. The cop explained he
had been traveling 1 or 2 miles over the limit by the radar set back at

the first car. The gentleman who had been stopped requested to go back and speak with the other officer (hmm ...). They went back and an introduction was started - only to be cut short by the gentleman who had been stopped. "I don't want to talk with the other officer, I want to see the inspection sticker on your radar set."

The cops looked at each other then back at the gentleman. Out came the credentials. "Federal Communications Commission. Either you produce the inspection sticker validated by a 1st or 2nd class radiotelephone or telegraph licensee with the proper radar endorsement or I'll have to write you up."

The cops tore the ticket up, packed up the radar, and went home.

This is true. It happened a couple of months before I entered the U.S. Navy in January of 1967. I laughed too! I hope they try and arrest someone from the FCC for having a scanner!

73s from Rochester, NY

I have a Kenwood TM-V7 dual bander with the cool blue face for sale.This radio is mint condition and works great.I will sell this with optional software and cable for downloading and setting up from a computer.Also will get the optional Extension cable for the removable head.The program is a nice and easy to use program.This has box and all the paper work with it.It has the software mods for the mars/cap all done.All software mods.This is a great radio and the reason to sell it is I have one setup in the base now. My price is firm at $400.00 plus you pay shipping.I think shipping would be about $20.00.
Please email me if interested.

Chris has this nailed exactly.

The Indiana law clearly exempts any ham as
long as the ham isn't TRANSMITTING on a
police frequency. That exemption would
allow the ham to have a scanner.

Funny too that newspaper reporters are also
exempted. Guess the cops have no problem
with reporters listening in, but don't want the
"regular public" listening.

Cheers,
Bill K2UNK
one of the team that got the old NJ law
changed a few years back.

Mark what country and state do you live in???
this info will help greatly as you have subscribed to newsgroups from
countries and 2 that are basically worldwide

Freqs differ greatly from state to state as well as country to country

Eg in the US some states use 30MHz-40MHz for Police, while here in
Australia they use 468MHz

Cheers
Kev

Under U.S. laws, a Misdemeanor is a crime. The other class of crime is
Felony. One can be arrested for either. There is a lesser category of
offense called a Violation that can get you a simple appearance ticket in
most jurisdictions.

Since when? My total registration fee for two years is about $45.00.

Subject: [InHam] Josh Church, N9VKS, case dismissed
Message-ID: <df.6151195.26849bb2@aol.com>

I received the following letter from Pete, N9SFX today and passing it on
for
your information. This was brought about in part, largely due to the
efforts
of the ARRL.
Maybe they aren't such bad guys after all

Dear Sirs:
I would like to thank you for contacting the Elkhart City court on
behalf of Josh Church. Today he received a letter from the court telling
him
that his case has been dismissed. I've heard that before. Now he has to
get
his radios back. I'm sure that the dismissal was in no small part
precipitated by your intervention. It is in no way a victory for Josh or
the
amateur radio community because he was not compensated for all the time
he
spent at the hands of his accusers and the court system. Neither was he
compensated for the loss of use of his equipment nor the damage incured

to
the same by the abusive treatment of the Indiana State Police. The
biggest
loss incured is the loss of faith that we all had in the justice system
and
the people who's job it is to " Protect and Serve " the public.

Pete Ostapchuk

I can't really see the attraction in listening to cellular (we call them moblie in Australia) phones anyway. It's no an issue here, due to the use of GSM or CDMA technology in all mobile phones sold. Our old analogue system was shut down this year, so there is no longer any mobile network to listen to anyway.

4851. Re: Beam Antenna?

Newsgroup: rec.radio.scanner
Date: 2000-08-28 04:15:37 UTC
From: John <dc2daylight@home.com>
Message-ID: <JHlq5.6562$a5.69634@news1.rdc1.mb.home.com>
Source record: 80992

Okay, I'll take a stab.

From your description, it's not a beam. Since it sounds like a "thick" antenna that doesn't taper, I'm thinking of a co-linear antenna (stacked elements inside a casing), but this is only a guess. It could conceivably be one of any range of possible frequencies. Probably no harm in trying it out, you'll likely see where it works well and where it doesn't, although receiving equipment demands a lot less than transmitting does. There is equipment to determine resonance of an antenna; see if you can get in touch with some local hams, somebody will likely have equipment to do this. In any case, don't go to all the trouble of installing until you determine the suitability of it. Above all, invesitgate all the safety requirements such as proper grounding, location, proximity to power lines etc. before you undertake such a venture.

4852. Re: Mod for BC855XLT -HELP

Newsgroup: rec.radio.scanner
Date: 2000-08-28 04:26:40 UTC

Message-ID: <4Slq5.17138$QW4.217520@news1.rdc1.mi.home.com>
Source record: 80993

If you have it, it will be located on a small sub-board, about the size of a postage stamp, located in one corner, near the front panel. Later manufactured units still had the holes and D201 markings on the board, but no diode, or jumper wire, because the mod was disabled by the manufacture.

Sure John. No problem, as long as you are going to stop adding crossposting your messages into the alt.firefighters newsgroup, and other places and you will stop troublemaking.

You be nice, and I will also. Never any doubt about that. Just stop replying to anything but scanner related stuff, like below.

So tell me, what kind of scanner are you using now? What made you decide to use it, instead of another model?

Much too big a list to write all of them down here John, but I
guess I could name one or two. Motorola. General Electric. Commnet.

Now, John, I thought we were all going to play nice. Could you please
ask any further information about this in email? We would hate to
think that you were not sincere.

Thanks.

John, one would wonder just how sincere you were with this
request, when you continue to crosspost into the alt.firefighters
newsgroup, that has repeatedly asked you stop doing so. People would
also wonder how sincere you were when you repeatedly made this
request in public, and not in private email.

Hi,

I was one of only 45 respondents when the FCC considered FCC PR DOCKET 91-36 AUGUST 20 1993. It is my belief that the FCC has rendered decisions on this topic more than once; therefore, each of you may want to do additional research to locate all FCC generated documents related to this topic.

I am amazed that the action the FCC took was not promptly shared with other hams and those who enjoy listenning via scanner. When this issue first came to my attention, I was profoundly disappointed that there was such a low level of response from hams and scanner enthuiasts.

I got involved when I learned that off-duty POLICE OFFICERS in Los Angeles were guilty of a CRIME if they listened to ANY police or fire transmissions, while in a motor vehicle, UNLESS they were required to do so by their department. The specific law is Section 42.44 L.A.M.C. (Los Angeles Municipal Code). This is the same law that makes it illegal for anyone else to listen to police OR fire calls while in a motor vehicle. And, I mean ANY police or fire department, even if it is skip!

Normally, this obscure law is used to arrest tow truck drivers that respond to traffic collision calls. However, I have personally witnessed its application outside of this senario. I also know the above story regarding the LA officer is true because I conducted the CRIMINAL investigation, against that officer, in May 1991.

During my investigation, I kept thinking, "this is assinine" because the only thing the officer had done was listen to police calls while seated in a friend's car. Neither of them were accused or suspected of responding to ANY police scenes or doing anything else illegal!

To digress, I believe that we as hams need to abide by the laws. However, we must also fight poorly written legislation, of which this is a classic example.

The above docket is there for YOUR protection. I suggest that each of you obtain a copy and carry it with you at all times. And, if you live in a state such as Michigan, get a copy of their Vehicle Code 750.508 (a) and keep it with your ham license. That way, if you are ever stopped, you can show that you are exempt from these laws.

Just my two cents worth,

Kevin Williams NI8H

You have all had your fun & a few moments in the spot light by
causing trouble & heartache for the members on these newsgroups.

I challenge all of you to simply STOP your trouble making posts for 2 weeks.
Then perhaps we will keep it quiet even AFTER that 2 weeks.
It's that simple, JUST STOP! Let this newsgroup have a rest.

Also use 78mhz in rural regions of NSW, or if that doesn't work in a place like Lightening Ridge, they use MF/HF. The city allocations are generally MUCH different to rural. City has most gov. comms in UHF, whereas country has most in the VHF mid due to there not being any GRN or such of sorts. It is better that way as one doesn't get all the crap off GRN when they don't have a trunking scanner, you only get what you want.

Well BK baby monitors are transmitting devices,and as such they should be considered 'bugs'.
No doubt not many would want to hear the sounds of an infant gurgling,drooling or crying its eyes out on their scanner,but on the other hand you might hear your neighbors going at it,arguing,or talking about their weird neighbors,hence the (potential) attraction to baby monitor monitoring.
I'll clarify matters a bit by saying that over the couple decades ive been into comm monitoring, I'va rarely took the time to scan this band myself,and I would really rather not know if my neighbors talk about me,or how they sound in heat,ect. But theres the answer to your question,and people who use these devices should be aware of the possibility oh having their privacy invaded by a nosy neighbor.

James

The system that is used by the coaches on the sideline actually made
by Telex. Motorola is the sponsor. It is spread spectrum and
encrypted.

The system the coach uses to talk to the quarterback is made by
Motorola. It is a set of two-way radios that are also encrypted.

>All frequencies are FM and in MHZ.

A Fixed Base Operator (FBO) at a nearby airport can sell you a sectional chart, a map for pilots that shows many of the aero frequencies in use. You might be able to get an out of date map for free - they're superceded every 6 months.

The voice transmissions are AM. Other than historical reasons I shall leave it to the reader to figure why they are atill AM. (There is a valid technical reason.)

I got a mod from QRZ.COM for the cell mod. It states to locate diode
D201. I have looked all over the board and there are no such numbers.
Is there a place I can find a schematic for this scanner and can
someone give a better description of the mod.

Sent via Deja.com http://www.deja.com/
Before you buy.

You have the WRONG mod info. Get the book "Radio Tech Modifications Vol. A" by
ArtSci publishing. It has the info PLUS pictorial diagrams about this
particular mod.......

Want to buy a used Regency model D-810 scanner. It is an older base model with service-search and FM broadcast radio capabilities.PHYSICAL condition not important, but MUST be in PERFECT working order (ELECTRONICALLY excellent).No "fixer-uppers" or "problem units" wanted. Will pay a fair, realistic price for the right unit.Please Email me DIRECTLY at: KLARRG@AOL.COM with info and best price in first Email.
Will also consider a NICE, excellent example of the same radio if price is right. LMK what you have. THANK YOU ! (<:

What's new in mobile scanner antennas. Im ready to
retire my rusty old Grove unit..

4885. Re: Some Seattle-area VHF Aero frequencies

Newsgroup: rec.radio.scanner
Date: 2000-08-29 00:00:00 UTC
From: Wade Blake <wade.blake@noaa.gov>
Message-ID: <39ABD607.E84BCC33@noaa.gov>
Source record: 80709
Cross-posted to: rec.radio.shortwave,rec.radio.scanner

An interesting freq. in the Seattle area is 127.775 (AM) if I remember it correctly. This freq. is used by all the local media helicopters/aircraft for news gathering, coordination, and traffic reports.

Wade, N7LGK

4886. Terminology: "FS" vs. "FA" on this site

Newsgroup: rec.radio.scanner
Date: 2000-08-29 00:00:00 UTC
From: klarrg@aol.com
Message-ID: <20000829114752.22408.00000108@ng-cd1.aol.com>
Source record: 80710

For those who REALLY dont know, the letters "FS" mean "FOR SALE", and the letters "FA" mean, "For AUCTION".It is nothing but deception to get your ad read to list something as "FS",.. then when you read the message, the seller is actually auctioning it off on Ebay.
If youn want to SELL something, then list the PRICE with the description of the item and use the correct heading "FOR SALE" in the subject line.
If you want to AUCTION it off, then be a MAN and use the heading "FOR AUCTION" in the subject line.
Sound like nitpicking? Maybe so, but a LOT of folks here dont want to stop and read about your damned AUCTION on Ebay, and those who do, WILL, ..without DECEPTION like this.Honesty sells, and being STUPID is not an excuse or a sales technique(for MOST of us, anyway).....

4887. FS: Mint Euro PRO-2042 and NEW Euro AOR AR-5000+3

Newsgroup: rec.radio.scanner

I agree --- I have an anti-spam filter on my newsgroup reader and
automatically deletes anything with FA in the subject line.

For the most part, most everyone does follow that convention, and it is nice
to see the 'new tradition' work.

>
No, not so. I personally spoke with the FCC guy. I'll see what I can
do about finding his name. I hope I kept that letter from the FCC
stating I had left my sweater there - there was no identification, they
remembered me. I went to pick the sweater up whilst on my way to the
pre-induction physical in Buffalo. I was chief engineer of WWHG in
Hornell, NY at the time. I was attending college at Alfred and my dad
had been clocked at 1 MPH over the limit. That town was something
else - I heard (unconfirmed rumor) that the limit had been 25 and they
nailed a trucker for 1 or 2 MPH over - he won on appeal - seems they
did not post the speed limit often enough (required if the limit was
below 30 - they just changed it to 30). Please remember this was over
30 years ago.
- Jim

Radio Shack has a nice unit, with a mag mount, and two coils. It's about 3' tall, and is made out of solid stainless steel rod. You may have to purchase a BNC adapter however, last I checked they were still putting on the old "car radio" type plug on it.

4900. Re: New Radio Shack Catalogs

Newsgroup: rec.radio.scanner
Date: 2000-08-29 00:00:00 UTC
From: st <st@reticent.net>
Message-ID: <DXSq5.10409$Z4.259555@news1.rdc1.tn.home.com>
Source record: 80724

I just went to Radio Shack to get some parts last night and the guy gave me the new UPC coded catalog with that new scanner. The scanner itself doesn't work that great, you gotta run it over the code like 4 times for it to work but it's a very cool idea.

"sdl" <lyles@erols.com> wrote in message
news:8of7k4bel1@bob.news.rcn.net...
I Have tried the free "cat" reader and I works great. It not only works with the radio shack catalog, but you can scan any upc code on just about any type of product and you will be taken to their web site (if they have one). Pretty soon there will be an additional cord that you connect to your TV set so the TV will give cues to your web browser to go to a web site. I haven't check but It may already be at Radio Shack.

Even though the advertisements all say the software and "cat" readers would be available in September it seems lots of Radio Shack stores must be giving them out along with the 2001 catalogs a little earlier.

All in all it really feels like I am living in the 21st century (wink)

The use of a scanner in NJ is NOT restricted in any way, unless you are using it in furtherance of a crime... if you get hassled by the local cops, tell them to show you the law that says you can't have that... if you still get hassled and it's confiscated, or worse - you get arrested, get a good lawyer to sue the PD and the cop...

Well, they DID say local governments are are preempted from regulating what we receive:

"... are inconsistent with the federal objectives of facilitating and promoting the amateur radio service, and more fundamentally with the federal interest in amateur operator's being able to transmit and receive on authorized frequencies. We therefore hold that such state and local laws are preempted by federal law. "

There is no essential difference between operating a transceiver and operating a receiver and transmitter, as far as the FCC is concerned. Both comprise a station.

Cortland

I notice you used a hoked-up address to post your whining about this. Learn to use your news filters. Filters will, indeed clean this up, and you can just add on offenders as they happen. Don`t want to learn to use your news reader software ? Then don`t complain. Your only problem is, you are either too lazy or too nosy to set up your filters, and leave them on....

I've been scanning my local Galloway Township, New Jersey, US
PD/FIRE/MEDIC/GOV't with my 245XLT for a few months. It's a small (5 freqs)
Ericson trunked system.

Last Saturday, POOF! gone! Nothing. The control channel is quiet. I can
hear other local trunked systems okay.

I think they've only had this system for a year or two. Could they have
gone digital?? Any way to detect this change?

Thanks,
Rick

All the same frequencies would be in use, except you'd hear static-like
noise instead of voices. Going digital wouldn't make the control channel
disappear.

Well, yes and no.....

CW is a bit tricky to decode due to some folks being better than others
at sending it. I've tried a program called CwGet that seems to do a
decent job if the signal is strong enough without much noise present.
It's shareware,$35 to register it, but there seems to be quite a long
evaluation period involved--it hasn't shut off on me yet! I'd recommend
it as a starter as no extra hardware is required, just plug the output
from your radio into the line-in jack on your computer's soundcard.
Does a pretty good job, considering how hard it is for a machine to
decode Morse. You can download it at http://www.dxsoft.com/micwget.htm
plus a lot of other sites.

Hope this helps!

Donald Reeve

Could be that they have added more frequencies and moved
the control channel. Could be a simple malfunction.

If you scan the frequencies, do you hear any traffic?

I've been studying legalese and court interpretations of law for a few years
now.

Where has the FCC clearly stated, in writing, that they consider a
transceiver to be identical to a receiver/transmitter combination in all
regulatory and legal respects?

Hello, Robert,

Since no one has given you an answer yet -- at least online -- I'll
give you my partial answer. We tested a 7100 and 8500 side by side
for sensitivity at several points around 400 MHz using a signal
generator and a precision attenuator and found the 8500 at least 10 dB
more sensitive than the 7100. I cannot attest to this but my
understanding is that the 8500 also outperforms the 7100 in terms of
dynamic range and noise level... but we didn't run those tests
ourselves.

That said, we're keeping the 7100 -- the 8500, built as well as it
is, feels flimsy next to the "tanklike" 7100. (The 8500 is somewhat
bigger, too.)

Hope this helps at least a little...

Eric

The voice transmissions are AM.

Thanks... I figured that out a long time ago. Somehow, people always ignore or miss the posts where I admit to a mistake (an uncommon thing in this newsgroup, to admit to a mistake!).

> Other than historical reasons I
> shall leave it to the reader to figure why they are atill AM.
> (There is a valid technical reason.)

I would guess because FM is line-of-sight, and therefore the transmissions from the planes would never reach the ground, and vice-versa. Also, FM has the tendency to "break up" with distance and become totally unreadable, whereas AM only fades to a weaker signal strength.

Yeah, I just ordered an original "black" Yupiteru MVT-9000 from Theicom in Germany.
Hopefully, it will arive quickly. First time dealing with them, but the prices were right.

4931. Re: New mobile scanner antenna

Newsgroup: rec.radio.scanner
Date: 2000-08-29 00:00:00 UTC
From: slvbeard@netzero.net
Message-ID: <8F9FC5615slvbeardnetzero@204.181.81.113>
Source record: 80755

Antenna Specialists makes a nice mobile antenna similar to the Radio Shack one, but it's a trunk
lip mount, which was a plus to me and my Ford Taurus. Looks nice. I was a little nervous about having a magnetic mount antenna on the trunk of my car, more for not wanting it to get
scratched up, but also for security. I have tested the Antenna Specialists trunk lip mount antenna right next to the Radio Shack magnetic mount antenna, and it just edges the RS one out
by a little bit. I don't think you could go wrong with either one.

Try here for some programs that will copy the code.

http://www.muenster.de/%7Ewelp/sb.htm

If the code is machine sent you will get good copy from some of the
programs. Hnad sent code is very hard for the computers to decode if
the sending is not very good.

4934. Re: N9VKS: Indiana ham arrested for having a scanner

Newsgroup: rec.radio.scanner
Date: 2000-08-29 00:00:00 UTC
From: Cortland Richmond <Cortland.Richmond@usa.alcatel.com>
Message-ID: <39AC6789.A421416B@usa.alcatel.com>
Source record: 80758
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.amateur.misc,rec.radio.amateur.policy

This one requires we recall that the Amateur's defense was that an Amateur is unable to buy a (current) transceiver whose receiver is restricted to only the amateur frequencies, and that this should not be held against him. The FCC agreed.

The same applies to receivers. In fact, it applies more so to receivers; no one makes here or imports into this country receivers which cover only the Amateur bands.

The FCC decision SAYS such local laws "are inconsistent with the federal objectives of facilitating and promoting the amateur radio service, and more fundamentally with the federal interest in amateur operator's being able to transmit *and receive* on authorized frequencies." (emphasis added)

The Commission did not need to say receivers and transceivers are equal. They said that the state and local laws which prevent us from receiving authorized frequencies (by banning an apparatus which covers others as well) are preempted.

You probably will have noticed the the FCC doesn't like to make broad pronouncements. I suspect someone will have to appeal to them that this decision applies to receivers as well before they will come out and say so explicitly. But that's the same approach they took to television antennas; having preempted laws against small satellite dishes, it took a few years before they preempted laws and covenants against conventional TV broadcast antennas -- which they did by extending the original preemption.

Cheers,

Cortland
(ka5s@saber.net)

> > I'll post my data and then leave the scanner groups forever.
> > Here are the terms again, just in case
>
> Richard, I don't care what you do.

Sure you do. You want to cause trouble and keep things stirred up and generally annoy people. You're also avoiding the issue about your so-called degrees. You're a liar when you claim to posses them. Prove the degrees or, to quote you, "or be found a liar by default."

Because your mental illness and expired medications are causing memory lapses, here are the terms again, just in case you develop the intestinal fortitude to face yourself. So, show us, Toilet Boy, are you man enough to face yourself? Or are you just a pitiful liar and coward?

Here's the deal: When you post the proof of your alleged degrees AND it's verified, I will post the information about my psychology degrees.

I'll even sweeten the deal. *After* your information is verified, I'll post my data and then leave the scanner groups forever.

John Mackey,

Please stop the constant baiting of other users. You've posted so many aggressively abusive messages over the past several weeks that your lack of sincerity in requesting some abatement is clearly obvious. It isn't hard to see that your new "persona" is designed to do nothing more than annoy and provoke those to whom you address these insincerities. Your agenda remains (as it always has been) to incite unhappiness and strife. I certainly hope that your ISP will undertake the long overdue disciplinary action that will result in your stopping this incessant harassment.

No you don't have a clue John-Corky. A Petty Oficer 3rd class is an E-4 same as a Corporal in the Army. An E-4 IS NOT AN OFFICER Corky you MORON! A PO 2 is an E-5 equals an Army Sargent. Not an Officer Moron. PO1 is an E-6 equals and Army Staff Sergant, Not an Officer you MORON! Chief Petty Officer equals an Army Sergeant First Class, not an Officer Corky. Even a Master Chief Petty Officer equal to an Army Sergeant Major is a E-9. Do you even know what the E-* classification means John-Corky? Enlisted Ranks. Call a MCPON or below and officer and they would rip your head off.

BTW LiarJohn-Corky. You posted earlier you were never in the Military. Mommy sending you off to Sheep camp again this year?

You are such an idiot crap head John-Corky. It is obvious you are the
trouble. I bet this NG has 2 weeks of fun because you will not be here.
Sounds like heaven to me. Leave early John-Corky and come back real late.

I read some about John-Corky going to East High School in Iowa, and getting beat up on a daily basis. I read some about John-Corky living on the Indian reservations running buck naked. I read some about John-Corky haveing problems with wet beds. I read some about John-Corky haveing sex with underage girls and underage prostitues. I read some about John-Corky selling Ham licenses. I read some about John-Corky have sex with other PARG members. I read some about John-Corky haveing sex with a guy named Petey the Portland a flute player or something. I read some about John being charge for molesting children. I read about John-Corky being charged for molesting the elderly.

I guess if the one deja.com you found about Glenn was true ALL of the above about you John-Corky must be also be true. You are a liar. Fraud. Creep.

Pro 2006,BC 895XLT, bc9000XLT,PRO 2042,BC 860XLT are all triple conversion scanners. Can someone please tell me what that means? Is it better as compared to doublr?? I thought you were not supposed to pick up cell images on a triple conversion scanner but I know you can on bc 860xlt and 9000 xlt. I just bought a PRO 2045- will I be able to hear cell images? thanks for any help.

Actually, GMRS radios *are* being considered FRS radios by a growing number of
users. The higher-powered Talkabout Distance and GMR series in particular are
becoming popular with FRS users who want more range. The fact that their use
is illegal without an FCC license seems to make no difference.

What happens to me<no radio ticket>is I always hit these
vehicle inspection sticker check points in these rinky dink
little towns on the way to Atlantic City a few times a
month.I have seen some postings recently where it says non- hams may have
this equipment<my state only YOUR rinky-dink lil states rules may apply>and
not fear prosecution.You really dont know what to beleive till
the PROCESS happens to you.So I come up on 2 this month.The first time I
just in a 2 second non-furtive
movement,I had the whole apparatus disconnected
and stashed out of view in carry bin behind the 2 passenger seats.The second
time I disconnected
the stock bc-245xlt antenna <makes radio very scanner looking> and slipped
on dual band custom antenna
which makes the 245 look like some kind of
wacky nextel phone of the future and just left it there.
What would you do?If you're not a ham?
spread the love and care around the household,Gibstah

Close, but no kewpie. A person is under arrest from the moment in which
his activities are interrupted ("arrested") by a law enforcement officer
acting under the cloak of authority. Until such time as this takes
place, the subject is not under any form of arrest, thus he is not
evading arrest (under law), should he not come close enough for the LEO
to make contact.

Yep!

I think the first speed radar system was developed in the late 1950s.
I've seen something about this old, it's big and it's a pain to use.

John, it is clearly obvious that YOU do not want this to
stop, as you keep posting peoples names in the subject line and
calling them troublemakers.

Please John, stop the name calling, and try to post on-topic.

> I use a Regency MX-3000.

Now, you see? That was not too hard. Unfortunately I guess I
asked you some technical questions that were beyond your capability
to answer. Lets try it again.

What made you decide to use the MX-3000 instead of another model?
Even if you cannot come up with a technical reason, tell us if it
was just a reason such as the color of the scanner matched your
clothes that day.

This story is great. Almost as good as the Craig Shergold story.

Just as big an urban legend however. No one ever seems to remember
the name of the FCC person.....

SNIP

It really wasn't a technical issue. The size & shape worked perfectly for
my application.

What type of scanner do YOU use, Blake?

> What type of scanner do YOU use, Blake?

A number of them. I have a Pro2004 here on my desk, as well as a
Motorola JT1000 scanning the local FD channels. At the office
I have a BC895, Regency with TF1, and a Spectra, VHF. I also
scan my UHF Community Repeaters with a Motorola Maxtrac.

I have outfitted most of my service vehicles with my personal
favorite radio with scan capabilities, the Motorola Spectra for
VHF, <most used> Maxtracs for UHF, GTX for 800, and Uniden
MR8100's for filling in the holes.

My son has a VHF Spectra in his pickup, and a Motorola HT1250
for a portable.

My wife scans with a Motorola M1225, or SP50 portable.

Now, of course, most of these are Two Way radios, but with their
superiour specs, they make GREAT scanners.

Of course, if I had to stretch, my 1200S, and my 2000 series
service monitors can scan.

4974. FS: Optoelectronics Optocom radio scanner

Newsgroup: rec.radio.scanner
Date: 2000-08-29 03:36:32 UTC

Source record: 80813

I am selling my Optoeletronics Optocom scanning reciever. I have not really used it. I bought it thinking I would get into the hobby of scanning but honestly I have not had much time to learn to use this unit. I do not have the original box nor the Trakstar software. I have the unit, the serial cable, power supply, standard antenna and a copy of the manual. It is perfectly clean. It is also of recent manufacture with the current Bitbanger circuit. I am asking $375 plus shipping. I can e-mail you a picture of everything upon request. I am in South Florida should you be local and care to inspect it.

Juan

GSM is very much alive in the USA at 1900Mhz. I think There is
nowcoverage in every major city (finally, Chicago and Dallas were the
last). Most is now provided by amalgam of companies under the
VoiceStream banner, although in California and Nevada, it is Pacific
Bell Mobile Services.

That is very true, Blake. Infact, several years ago during my affiliation
with a local
Sheriff's Dept (which operated on hi-band), I commonly used my issued MT-500
to scan the law enforcement & fire freqs as I was VERY close to a commercial
paging transmitter. The MT-500 was one of the FEW receivers that could
survive, & the scanning board in the MT-500 was a fortunate option.

Actually, the headsets are wireless, but I believe they are secure.
Possibly spread spectrum. Try a web search on Google for other related
freqs.

The stadiums and the teams should have conventional Uhf freqs in the
450-470 range. If you come up with anything interesting let us know...

Unit is very clean and works perfectly. Includes antenna,manual and of course,power cube. 200 channels with 900 band,air,miitary. Has the vfo knob,weather alert and can be used in a car. $135 shipped includes Priority Mail. Please email me directly with a name,address and phone number if you want to purchase or have any questions. I have a feedback of perfect 52 on Ebay. thanks

4995. FA: (REPOST) 1. Pro 2006 w/ OptoScan 456 Computer Interface - 2. Scout 40

Newsgroup: rec.radio.scanner
Date: 2000-08-30 00:00:00 UTC
From: Robbin Olson <rolson@mcg.net>
Message-ID: <39ad7e62@news.mcg.net>
Source record: 80600
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.shortwave,rec.radio.swap

This is a repost regarding the scanner and Optoelectronics Scout 40 that I have for auction on ebay.

If you are looking for a mint condition Radio Shack Pro 2006 with a full frequency (yes, including cellular) Optoelectronics OptoScan 456 computer interface please check out the auction that I currently have running on ebay. It will end shortly.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=421547838

I also have an Optoelectronics Scout 40 Frequency Recorder that is also full frequency (yes, including cellular). The Scout is in very good to excellent condition and works flawlessly. There are a few small wear marks on the corners which are not very noticeable. The Scout comes with a variety of cables, including cables for the AR8000 and for a CI-V interface (which would include the OptoScan 456 amongst a variety of other computer controlled radios).

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=421600314

Thank you for taking the time to view my auctions.

Regards,

R. Olson

> Any other wild things has anyone heard?

I work with a guy who is an EMT in a small rural town. Anyway, living in Iowa we tend to get our share of snow each winter. He tells me, whenever we get a big snow and get" snowed in" this lady will call in and complain of dizziness. The ambulance goes out behind a snow plow and gets her. But by the time she gets to the hospital she if fine. Well, the hospital is located 15 miles from this ladies house, but it just happens to be across the street from her daughters house.
It really pisses the guys off (as well it should) She just wanted to get to town to play cards and have some tea with her daughter.. Some nerve......but an expensive taxi ride.

5010. AT&T 900 Mhz HS-8500 Comments????

Newsgroup: rec.radio.scanner
Date: 2000-08-30 00:00:00 UTC
From: Jim Bo <jbollit@ix.netcom.com>
Message-ID: <39ADA147.A0D43BAC@ix.netcom.com>
Source record: 80615

Hello,

I saw at Costco the AT&T HS-8500 900 Mhz cordless phone which claims to be spread spectrum.

Does anyone have any experience with this phone that can comment on reliability, range, signal clarity, interference with other signals/phones, can it be "heard" on a standard scanner, etc.?

I read sometime ago about a different phone that was spread spectrum from the base to the handset, however there was an analog signal from handset to base which could be picked up on a scanner.

Any and all input welcome

Thanks in advance.

Jim

http://beagle.colorado.edu/~eesnyder/eesnyder/pro2006mod.html says:

Keyboard Beep Delete

With the top cover removed as described above, locate connector CN3,
a 15-pin connector with colored wires at the front of the main circuit
board. There are two precedures which will stop the beep tone from
being heard through the speaker; read both to decide which procedure
you want to follow.

(1) Find the center grey wire coming from CN3 and cut it midway to
disable the beep tone. You may wish to solder a resistor in series
to reduce the beep volume, a trimpot to vary the volume of the beep
tone, or a minature switch to choose between beep and no beep.

(or)

(2) Using a pair of needle-nose pliers, CAREFULLY pry the plug from CN3,
revealing a row of pins. Locate the center pin (#8) which corresponds
to the grey wire and bend it down flat, disabling the beep circuit.
Reinsert the plug. The pin may be erected again later to restore the
beep tone if desired.

This completes the restoration procedure. Reattach the cover and replace
the screws.

Hello:

I have updated the webpage. Please visit. I have installed a web forum to post messages about Radio Shack Radio products. Mod, hints and questions accepted. Take time to also look at the online store that I'm working on too. This helps keep my interest in the site.

Shinwa SR001 Wide Band Scanning Receiver
$250 shipped anywhere in the CON US

Picture:
http://www.webdeals.net/scanpix/swsr001.jpg

Covers 25 to 999.995 MHz (full cell)

FMn/FMw/AM

Selectable tuning rate
200 memories (10 banks x 20)
Memory scan or band scan (search)
dual antenna inputs, switchable
25 channels/sec scan
35 channels/sec search
one button selectable television audio reception

Remote control for control of all radio functions
three color LCD display

Radio is at least a 9 (more like a 9.9)
never mobile, non smoker
almost like a new one.

In original box: includes d.c. cord, mobile mount, remote
control and manual

I live in a very bad RF environment. This scanner is very sensitive and with one 100,000 watt FM radio broadcast and another 50,000 watt FM radio broadcast transmitters less than two miles form me, it causes problems. The Shinwa has one hell of a receive on it and this is why I'm selling it. The radio stations transmitters are so strong that it causes intermod/front end overload with this scanner along with most other scanners I own. My PCR-1000 does the best job so far of eliminating it. I can't even own a dual conversion scanner because of the FM transmitters and a dirty pager transmitter in the 462MHz region.
This Shinwa is a VERY nice receiver and I would never have thought about selling it if I were not so damn close to these transmitters. I would not recommend buying this one if you live in a hi-RFI area like me.

The remote control and the multi colored LCD display make this one the best looking scanner/receiver out there

$250 shipped anywhere in the CON US
http://www.webdeals.net/scanpix/swsr001.jpg

NO TRADES PLEASE.
PRICE IS FIRM.

I used to have one of those. They are worthless. I don't like them. My mag mount double loaded scanner antenna does better. I think it is 36" tall. It really pulls in the signals.

From: jaysonjfw@my-deja.com
Message-ID: <8ojbs4lqn1@nnrp1.deja.com>
Source record: 80668

I have recently purchased a Pro-94 and have been trying out the 2+9 keypad combinations. So far I have figured out what a few do.

All combos are with unit off. Then with keys pressed turn unit on.

2 & 9 - will clear frequency memories.
2 & 9 & trunk - will restore some memories that were cleared.
but not in the same banks as before. Possibly
restores bank 1 only and places it in bank 8.
thats what happens on mine

I am sure there are others working on this same thing. If you have any other keypad functions and know what they do, feel free to share the knowledge.

And it sold for $330.00. That's still not a bad price for a NIB Yupi MVT-7100,
since the asking price in the newsgroups for a used one seems to be
$400.00-$500.00.

This I definitely have an issue with.
you claim to be a petty officer (retired/reserves?) with the Navy?

Funny, I called a few friends (all of whom were in the navy
at one point or another over the last 20 years). I asked them to run
your name through a few channels. Guess what they came up with?

NOTHING!

I hope you realize: imporsonating an officer of the military is
a federal offense. in fact, imporsonating military personel of any kind
is a federal offense.

Care to post your serial number (or how about your dd-214 showing you
were discharged honorably).

Don't bother changing the subject, or side stepping the issue
9all this will prove is that you aren't military of any kind
and that you lie like a dirty old rug!).

>wait in the ER waiting room so she called 911 instead.

That seems to be a very common thing with medical "emergencies". My dad used to be an EMT with the local ambulance company and it used to really piss him off how much patients would abuse the system.

Here's one for you all though. My dad says he was working 3rd shift one night when a call came in of a hampster bite victim. Although they were "technically" in code 3 status, needless to say my dad and the rest of the crew weren't in any hurry to get to the location. In fact, if the nearest Del Taco were open, they would have drove through it and picked up a bite to eat along the way.

And another one which just recently happened (dad overheard it on KFI 640 - L.A. station): an ambulance driver transporting a stabbing victim and the victim's mother stopped at a doughnut shop while he was enroute to the hospital. I wonder how superficial the kid's cut was.

Arlington uses a Motorola Smartnet Hybrid system but you will also want
to listen to Grand Prarie, Mansfield Fort Worth and the other towns directly
bounding Arlington as activity and jurisdiction often overlaps.
One night there was a major DEA bust that happened in Arlington but all surrounding
cities were involved because somehow, a person who was a drug manufacturer managed
to slip by and they chased him in his care all over Arlington, into GrandPrarie and then
back into Arlington and Ft. Worth.
All towns directly around Arlington all the way before Irving uses Motorola
Smartnet systems. Irving is about the only town that uses EDAC's in the Dallas, Ft.
Worth area anymore. What's ironic is that most Radio Shack Scanners are made by uniden
who happens to have world headquarters in Fort Worth, and all Uniden Scanners come
preconfigured to the Fort Worth and surrounding area frequencies by default.
As far as I know, no police or fire dept in DFW uses LTR trunking and as I mentioned
before,
I think irving is the only one using EDACs, meaning that all you really need is a scanner
capable
of trunking Motorola Smartnet, unless you will be taking your scanner in your car and
programming
all of Dallas/Ft. Worth into it.

Rad Shack has two models; one of them has a BNC connector. You can find the other ones cheaper though (on clearance). I own both, but would not recommend them to anyone for wideband VHF/UHF listening. While they work fairly well for the middle of that range, I found the performance poor for both Low band VHF and 800 Mhz stuff.

I've heard the Austin Spectra is a nice mobile antenna, but have no personal experience with it. I currently use a hy-gain cellular nmo mount antenna for most of my mobile listening, as it works extremenly well for trunking. I also have the BNC rad shack model in the trunk for times that I need it.

NCO's are never referred to as just officers. The fact that there is no commission should be an indication that the individual holds no office.

All the service branches use the term NCO. Were you NCO 534th in charge or something?

5043. special transmission on shortwave!

Newsgroup: rec.radio.scanner
Date: 2000-08-30 00:00:00 UTC
From: Franz Ladner <FLadner@chello.at>
Message-ID: <39AD5647.8E73B64@chello.at>
Source record: 80685

*** special transmission on shortwave, Sept.6th, 5965 kHz!!! ***
***Sondersendung aus dem DX-Camp Doebriach!!! ***

Since more than 30 years DX-ers and radio amateurs meet in
Doebriach in the south of Austria to listen radio. Since more
than 50 years children meet there to make holidays and produce
campradio which is broadcasted via loudspeakers in the whole camp.

This year it has been possible to combine both:
On September 6th, at 5965 kHz, from 17.00 to 18.00 UTC
the best parts from this campradio, (together with some
contributions from the members of the DX-camp...) will be sent
via Deutsche Telekom Juelich. Although the program is in German
it may be interesting for you to listen to it as it is one of
the first transmissions from private organisations from Juelich.
There is also a special QSL if you send a reception report.

If you want more informations about the DX-camp please contact:
Franz Ladner,
Leipzigerstr.21/28,
A-1200 Wien
FLadner@chello.at

If you are interested to visit Doebriach with a group of
children, please contact
Falkencamp Doebriach
Rauhensteingasse 5/5
A-1010 Wien
falkencamp.doebriach@kinderfreunde.at
http:///www.falkencamp.at

>>> Dï¿½briach on the Air!!! <<<

Seit ï¿½ber 30 Jahren treffen sich Kurzwellenhï¿½rer im Falkencamp
Dï¿½briach, um dort weit entfernte Radioprogramme zu empfangen.
Seit ï¿½ber 50 Jahren treffen sich dort Kinder, um dort Ferien zu
machen und seit (fast) ebensolanger Zeit produzieren sie dort
selber ein Campradio, das dann ï¿½ber Lautsprecher abgestrahlt wird.

Was liegt also nï¿½her, als das zu kombinieren? Deshalb kï¿½nnen
dieses Jahr Ausschnitte auch ï¿½ber Kurzwelle empfangen werden.
Zu hï¿½ren sein werden Beitrï¿½ge aus dem Campradio von Dï¿½briach
und Wiesen (Burgenland), wo dieses Jahr das internationale
Falkencamp (IFM-CWC 2000) stattfand, sowie Beitrï¿½ge aus dem
DX-Camp.

Da die teilnehmenden Kinder aus zahlreichen europï¿½ischen und auï¿½ereuropï¿½ischen Lï¿½ndern kamen, ist dies natï¿½rlich auch eine gute Mï¿½glichkeit, um die Mï¿½glichkeiten der Kurzwelle aufzuzeigen.

Die Sendung wird am Mittwoch, den 6. September, von 19.00 bis 20.00 Uhr (MESZ) ï¿½ber den Sender Jï¿½lich bei Kï¿½ln auf der Frequenz 5965 kHz abgestrahlt. Eine Sonder-QSL bzw. nï¿½here Infos ï¿½bers DX-Camp gibts bei:

Franz Ladner, Leipzigerstr.21/28, A-1200 Wien,
EMAIL: FLadner@chello.at

Wer mit einer Kinder/Jugendgruppe ins Falkencamp kommen will, bzw. wer genauere Informationen darï¿½ber mï¿½chte, schreibt bitte an:
Falkencamp Dï¿½briach, Rauhensteingasse 5/5, A-1010 Wien
Email: falkencamp.doebriach@kinderfreunde.at

Informationen erhï¿½lt man auch auf der Homepage:
http://www.falkencamp.at

Besonders bedanken mï¿½chten wir uns auch beim Team des Senders Jï¿½lich, das uns mit Rat und Tat zur Seite gestanden ist! Es gibt nï¿½mlich erst seit kurzer Zeit die Mï¿½glichkeit, auch ohne eigene Radiolizenz Sendezeit fï¿½r Auslandssendungen zu mieten. Wer dies ebenfalls tun will, sollte an die Rundfunksendestelle Jï¿½lich, Deutsche Telekom, Merscher Hï¿½he, D-52428 Jï¿½lich, schreiben.

Post it here, read it here..
MPT1327 is, dare I say it, the current trunking standard for Europe..
That is until TETRA, a digital trunking system, takes over :-(

Glad to hear from someone 'in the know'. This is what was told to me. The way he was laughing made me feel the story rang true. I will admit that anyone (law enforcement or not) will end up getting 'canned' if he or she abuses their position in a job. That said, can you - honestly now - say you never, nor anyone you knew in your job, ever 'misappropriated' a pencil, or pen, or anything else? Or perhaps threw the dice as apparently one individual may have done? The only reason I gave credence to his story is the way he was laughing and the tears WERE pouring down his face. Obviously, had someone called someone else's bluff, there could have been heck to pay. Yes, I had my 1st phone, telegraph, etc - sure, there could have been problems. Did it happen? My guess is that it probably did simply by his reaction. I also was on Guam. When I have mentioned we had run around 1,000,000 watts erp, few believe it. Consider this: 3 enlisted hams (1 e-2, 1 e-3, and 1 e-4) are in the shack. The number two in command, the XO, a light bird (o-5) comes in wanting a phone patch. 20 meters is a mess. The propogation was very poor and the big guns were comming in around S-2. We tried. We got a station out of LA who said he'd try a patch if it was local, but the qrm was killing us. We were running a Collins S-line into a TH6-DX up 102 feet over salt water. The XO asked if we didn't have enough power. You gonna explain? No, sir, that's the problem - not enough power. He asked if we could listen from the shack if we could transmit somewhere else. Of course we could. He picked up the telephone and called THE US NAVY TRANSMITTER site at Barragada, Guam. "This is the executive officer. I am going to put a man on this telephone and he will give you the frequency. I want this telephone patched into a 40 KW transmitter on a rhombic pointed stateside on that frequency." This is something no one would do on his own - the law aside, that was a military installation. Who would argue? The S-meter simply went to the rail as that transmitter fired up. We got a station in San Francisco to reply and he simply asked "What in hell are you running old man? I can't even hear Japan and you're 40 over 9!" This is also a true story. If the goo hit the blades, who's in trouble? The goo wasn't likely to hit - unless you argued with the commander! As far as a million watts, I am sure that huge rhombic had WAY over 10 Db forward gain. We had to be at least at half a million watts erp and likely at a million; perhaps a bit more. As to who was actually running that - I have no idea. They were located 20 miles away at the transmitter site. For now, however, I simply run 6 aa alkaline batteries and get by very well on 440.

Hi All,

The SWLINKS website is currently soliciting reviews (brief or comprehensive) for any kind of shortwave or scanner equipment. If you are highly familiar with a particular piece of equipment, your review is welcomed. If it meets editorial standards (spelling, grammar, punctuation, completeness) it will be published on the SWLINKS site exactly as written and credit will be given to you ("Contributed by...). All reviews should be submitted to core@vdirect.net or worldvista@altavista.com. Please use your spell-checker and common sense, as no editing of reviews will be done, and no reviews will be posted that do not appear entirely professional.

There will soon be a separate review section on the SWLINKS website. Please visit the site at http://swlinks.webalias.com.

Sincerely,

Tim Gerchmez
Webmaster, SWLINKS

I have been following this newsgroup for years now.
And I must tell you--- between the the two groups
you people are so pathetic on both sides. Its no wonder
Bill wanted to get out of this scene.

>>
>>This is true. It happened a couple of months before I entered the U.S.
>>Navy in January of 1967.

This sounds like another urban legend to me.

Back then we loved to spread macho stories like that ... the
few agents who actually tried such confrontations were very
quickly identified as problems and were soon weeded out if they
didn't get back into line.

FYI - a radar endorsement is not and was not required or valid
to service a speed radar, just for Marine Radars. And there is no
such thing as an "inspection sticker". The most that could
have been required in the field is an ID tag (FCC Form 452-C)
with the name and call letters of the licensee. Service records were
inspectable on request but could be, and usually were, kept
back at the shop.

> I laughed too! I hope they try and arrest someone from the FCC
> for having a scanner!

The relevent law is very specific about "in the performance oi
his/her duties" as a Federal enforcement officer. Won't
happen, although FCC agents have been stopped and cited for
speeding while tracking radio violators as well as other
traffic offenses, even in official vehicles.

>The fuzz had radar way back in '66?

NYPD had several radar cars as far back as 1961 and LAPD had
some as well in the same time frame. They were big clunkers

with plastic "radomes" for trunk lids and they stood out like
sire thumbs. We could spot them a quarter mile away.

>become totally unreadable, whereas AM only fades to a weaker signal
>strength.

Nope. If two FM signals occupy the same frequency, the stronger of the two will dominate to the exclusion of the weaker one. This means that a signal could get 'lost'. Under the same circumstances with AM, a hetrodyne occurs and it's obvious to all that there are two signals 'on frequency'.

I don't think the radio waves "know" they are being AM or FM modulated-
they travel the same despite the type or lack of modulation.

> Also, FM has the tendency to "break up" with distance and
> become totally unreadable, whereas AM only fades to a weaker signal

The reason is that FM displays capture effect- totally eclipsing a weaker
signal. In AM it would be obvious another station was also on channel.

Corky, a Petty Officer is not an Officer you enlisted maggot. Impersonating an oficer is a crime!!!

Where are you going to be for your two weeks. I have a few friends left in the Navy I would love for you to meet them. Who is you CO? Where are you or do I have to find you myself maggot?

It is sh*t asses like you that have screwed up the Navy. I can't wait to get to your ass maggot. Where you going for your reserve weekend boy. I'll hop a flight and meet you.

Officer, you f*cking liar.

The Navy can't have gone this far in the sh*t hole! I can't believe it!!!!

This is a frigging nightmare. Was proud to retire from the Navy, I didn't want to but had no choice and now I see they let this sh*t ass in. God save us all!

5082. Ground an Antenna in the Attic?

Newsgroup: rec.radio.scanner
Date: 2000-08-30 02:20:56 UTC
From: andyman@noneofyourbeeswax.com
Message-ID: <39ac70e5.1513457@netnews.voicenet.com>
Source record: 80796

I have a RS Omnidirectonal Multi-element dipole 20-044 antenna and need to know if I should ground the antenna. I am mounting it in my attic. Will grounding the antenna improve it's performance, like a ground plane antenna? Or is grounding only for safety issues? Is it unsafe to have an ungrounded antenna in an attic? Which type of antenna should be grounded indoors, what about a discone?

Thanks for everyone's help,
Andy

How about a 7 year old with an M&M in his ear? Seems the kid was sleeping on the couch when his 4 year old brother dropped the candy in his ear. Patient had no complaint of pain or discomfort, was not crying or carrying on. Parent had a car but didn't want to have to wait in the ER waiting room so she called 911 instead. We had the kid jump up and down on one foot while tapping on his head like you do when you get water in your ear and out popped the M&M.

IMNSHE every FCC inspector did...we got it in "boot camp".
Those PDs who had professional service departments knew it
also.

Smart inspectors didn't mess with the PDs because all the
agency "field brass" was tight with the PD comm folks through
APCO and working interference cases with/for them. At least
in my office......

Yes, All three for sale as one deal, will not break up. Reason for selling is I sold my pro2006 with opto456 installed. Both scout and cub come's with charger and manuals. I only have the box for the cub. The dtmf decoder is been used three time's and is in mint condition as well as the cub. Every thing must go! I'm selling all three for $300. I will pay for the shipping, The first person you emails me will have first option to buy and so on. Thank you!

Hi Adrian;

It doesn't sound like you're all that technically oriented (no insult intended), so I would recomment going to your local Rad Shack and picking up some of those "no solder" connectors. They come with directions and while they are not the best type of connection, they should serve better than your current arrangement. Just make sure you find out exactly what connector type you need and what cable you have before you go.

Cheers

Dipoles do not need to be grounded, either inside or out. Neither does a
Discone.
On a dipole, one arm is the ground the other driven element. On a discone,
the flat 'top hat' is the ground plane, and the multiple elements angling
down are the driven elements.

In general, no antenna in the attic needs a ground. (I had 7 antennas in my
attic, including a vhf/uhf log periodic on a rotator)

Remember, it isn't a roof, it's a RADOME.

My house house vinyl clad siding, with aluminum over some insulation. But the good news is that the RADOME in the attic is mostly above the siding, hence, RF transparent.
So keep in mind that if you have Al siding, your attic may still be a great antenna site!
I've got dipoles, 1/4 wave verticals, and loops, and none are fabricated to face the outdoor elements.
None have a direct path intended for earth ground.
Alternatively, the local squirrels enjoy playing with my outdoor antenna's piece parts.

As far as police monitoring goes..I've heard alot, just the other day I heard SHOTS FIRED! SHOTS FIRED! They had a chopper in the air near my house so I decided to go out and try and stay out of the way but have a look. Very interesting, cops everywhere too. Had cops passing me head on and cops passing me from behind, cops passing each other CODE 3 in opposite directions. Kinda confusing looking too.

Fire wise, I managed to catch a shaken firefighter trying to save an older man's life in the middle of a thunderstorm late at night out on his front lawn. ....Firefighter yelling for EMS to get there ASAP..serveral times over. The man did die unfortunately I read in the paper the following day. That was a pretty shocking experience to hear.

Other night heard police give a description of the suspect, guy comes over radio and responds, he's got big teeth in the front, you know, like RABBIT TEETH.

I About died laughing.

One thing I've noticed, we have alot of 10-74's in my area (holdups).

There are huge lists of frequencies they've been reported on over the
years. I can only speak to where I found them at a show last summer:

141.850 Team leader, 4/6-plane formation
235.250 Show control
322.950 Solo pair

All AM mode, including the VHF frequency.

Plus an FM maintenance frequency somewhere between 413.000 and 414.000
(they move around a lot, can't recall which they were on at that show).

Hope this helps

I think it's in Radiocommunications Rules R.R 1-7, R.R 1-9, R.R 32, R.R
1-17, R.R 24-1 al.2023 together that made the rule.

If I say so it's because we have the same legal problem in France with
the criminal code article R.226 (forbidding some equipments) and that
legal argument has been studied by lawyers.

Making QRM with spurious is illegal, so you must have permanently (even
in portable) an equipment to monitor that you didn't radiate spurious.
The cheapest equipment to monitor spurious with frequency display, is a
wideband RX, so its use is not illegal because nobody can obligate you
to buy an EXPENSIVE portable spectrum analyzer.

Ham-radio is not only for rich people (if governements disagree with
this principle, sell portable spectrum analyzer for $200 !)

What do you people think of the Pro-94? I am thinking of getting one. I know I have heard a lot about Uniden being better, I am looking for Trunk Tracking, although I am not sure what system they use in this area. Are there still enough people using CB's and Ham Radios that I should be concerned with the frequencies below 29mhz? Also, If anyone knows how to find out what trunking system that an area or PD uses, just short of asking them, please let me know. Thanks.

Jesus H. Christ... I come here to read about scanners and 75% of content (and I mean 75 frigging percent!) consists of personality spats. There's so much interesting stuff to listen to on scanners that it's amazing to me people would waste their time bickering, whining, griping, moaning and fighting. I mean, scanners are more interesting (to me) to listen to than shortwave. 24 hour/day local action on thousands of frequencies, and all anyone can do is gripe?

Go listen to your scanners and stop insulting people (and each other). What the fuck is the point?

Newsgroup: rec.radio.scanner
Date: 2000-08-31 04:50:31 UTC
From: Robert <spamshield@on.com>
Message-ID: <rulr5.15110$_8.840613@typhoon.tampabay.rr.com>
Source record: 80636

This works for the 2006... should work for the 2005 also:

Keyboard Beep Delete

With the top cover removed as described above, locate connector CN3,
a 15-pin connector with colored wires at the front of the main circuit
board. There are two precedures which will stop the beep tone from
being heard through the speaker; read both to decide which procedure
you want to follow.

(1) Find the center grey wire coming from CN3 and cut it midway to
disable the beep tone. You may wish to solder a resistor in series
to reduce the beep volume, a trimpot to vary the volume of the beep
tone, or a minature switch to choose between beep and no beep.

(or)

(2) Using a pair of needle-nose pliers, CAREFULLY pry the plug from CN3,
revealing a row of pins. Locate the center pin (#8) which corresponds
to the grey wire and bend it down flat, disabling the beep circuit.
Reinsert the plug. The pin may be erected again later to restore the
beep tone if desired.

This completes the restoration procedure. Reattach the cover and replace
the screws.

Good luck,

Robert

Message-ID: <w9mr5.33157$ZI2.1868684@news1.rdc1.il.home.com>
Source record: 80639

I have moved and updated my web page a bit.

It now resides at:

http://members.home.net/tandkmoran

There's a link to my new page dedicated to the
Chicago Air & water Show 2000. It contains many photos
and even some WAV files. I set it up for high res screens
(1024 x 768 and up) with Internet Explorer 4.5 or better.
You'll also want the quick time plug-in. You'll also want
a fast connection and a lot of ram - the page is huge,
about 5 megs - but worth the wait. Other platforms may
work but perhaps not as well. Again - give it time to
load - it's huge.

The page should be up for a while. At least until Kim
discovers that I've placed a picture of her on the web,
or until I am maimed with a frying pan, or until I'm
living in a box, or until she makes me take it down,
or whichever comes first, or all at the same time.

Happy Scanning! - Ted

I would have never heard of this group if it was not for cross posting. On my end, I can tell who started what as far as the garbage I have seen. I ended up setting kill files up. One individual does it and with all the bickering, people replying do the same.

Not only is the garbage from the original person cross-posted, but so are the responses. Do you not have the option of replying in the original newsgroup only instead of trying to get the last word in every newsgroup that is unfortunate enough to receive this crap?

If names change to avoid kill files, then why not "maintain radio silence" and keep adding to the kill file. This constant bickering is like a fix of adrenaline for a troll. Just ignore.

A majority of this group sound well educated, intelligent and yet these flames are like watching Jerry Springer. Some one calls you a name and you feel that you have to reply otherwise the newsgroup will believe the insults you received to be true?

In real life you cannot ignore problems and hope that they go away. In this situation I think it would actually work. Ignore the problem.

Prove it, liar, I know you are but what am I, this by default that by default, i will if you will, etc etc etc. Just give it a rest and if you can't do that then at least keep it for yourselves.

Hi to all, I have a old Lafayette HA-600A that works pretty nice for
it's age. The only problem is the RF gain control is in need of
replacement. It has 2 pots ganged up together. The problem is
the pot has some wires soldered to the outer case and
the pot value is covered over by solder. Does anyone have the
schematic or a Sams photofact of this great old radio?
If you can help me please e-mail me direct at:

mrrusso@bellatlantic.net

THANKS, Mark N2FLF

These are page numbers, not Radio Rule sections.

>R.R 32,

RR 32 defines "Port Operations Service" which has nothing to
do with amateur radio.

>R.R 1-17, R.R 24-1

More page numbers.

> al.2023 together that made the rule.

RR 2023 deals with the obligation of licensees to ensure secrecy
of communications......

Try again, mon ami. I do this for a living.

>If I say so it's because we have the same legal problem in France with
>the criminal code article R.226 (forbidding some equipments) and that
>legal argument has been studied by lawyers.

French law and legal processes are radically different from US
communications law. I for one know this because I was trained
as a regulatory legal and engineering specialist by someone who
was trained under the French Administration at a time when it
considered that the average citizen needed access to a radio
tramsnitter as much as to a machine gun <ggg>

In the US, one is required only to ensure that spurious signals
are not being transmitted, and there is no requirement that any
specific piece of equipment be on hand to ensure that. Indeed,
one can borrow equipment to do this, or can even rely on off-the-air
observation by a fellow ham or commercial engineering service.

>Making QRM with spurious is illegal, so you must have permanently (even
>in portable) an equipment to monitor that you didn't radiate spurious.
>The cheapest equipment to monitor spurious with frequency display, is a
>wideband RX, so its use is not illegal because nobody can obligate you
>to buy an EXPENSIVE portable spectrum analyzer.

Rest assured, though, that if one is found transmitting spurious signals, s/he will be cited for the violation regardless of access to a wideband receiver, a spectrum analyzer, the entire HP Laboratory, or none of the above.

Bottom line - the press has the means, opportunity, and
sometimes even the motive to make mincemeat out of the PDs or
anyone else who gets in their way and both sides know it.

Phil,

Remember (sure you do!) when we used to be required to have a way to monitor
our operating frequency WRT the band edges? There're STILL LM's coming out
of the woodwork at hamfests.

Not _required_ anymore - but we are sure still liable for violations.

Actually, NJ does not have any laws restricting scanners, unless you are committing a crime while in possession of one..

:operators to the Feds. And now law enforcement is targeting
:hams. How ironic. "How does it feel?"

Those same cops are taking outlaw CB radios from CBers and having them
destroyed. I had the city clerk of Elkhart tell this. The drug
runners are using CBs and scanners to track the cops. The lead
vehicle has the scanner and he radios back to the mule about the cops.
So the cops are taking out anyone with a radio antenna (non broadcast
and cell).
```

>But if you get pulled over for speeding or
>improper lane changing, aren't you committing a crime?

Not necessarily... it depends on how the state traffic laws are written - here in RI, the traffic laws have been "decriminalized", which means speeding, going through stop signs, etc.. isn't a crime. Of course, misdemeanors are still crimes (like driving on a suspended license..)

It's getting some hits. Please take a look. i'll be adding more in the next few days. I have now a digital camera (Kodak DC 20) and I'm gonna take some picture of some of the other RS stuff I have.

Please take use of the forum I have set up too. And please, do not post off-topic messages, they WILL BE DELETED. I had to delete a couple from it this morning.

It's setup to operate out of the CB band and/or
with high power.

Of course all they'd need would be an ham radio instead of
CB. This sounds like the beginning of the war on hams. LEOs
think they own the road and will not differentiate

between CBers and hams.

5167. Battery Question

Newsgroup: rec.radio.scanner
Date: 2000-09-01 05:03:45 UTC
From: Tom Tretheway <tomt@ncal.verio.com>
Message-ID: <39AF3914.B9FD77D1@ncal.verio.com>
Source record: 80594

Will I risk over charging the nicad pack on my BC 245 by keeping the charger plugged in while the radio is on? My old RS Pro 34 had two separate power inputs, one for charging and one for just power. I could listen to the radio "plugged in" without worry about overcharging the batteries. With the BC 245 there is only one input, "charge" and I worry about overcharging. I hate running off batteries when I could keep fresh power in the radio and run off AC when at home. Also, the charger voltage is 12 volts for 4, 1.4 volt cells in series. I assume the radio actually runs on the 5.6 volts the batteries deliver. If I were to rig up a battery bypass, I assume I'd need a 5.6 volt power supply. I love the radio but don't care for the way it's powered. Are there any battery experts out there who could answer these questions?
Thanks in advance.
Tom Tretheway

A dipole is inherently a balanced antenna. That means there is NO
ground. Properly it should be connected to coax via a balun. In a lot of
cases though (especially receiving) you can get away with connecting coax
to it directly.

Discones, groundplanes are unbalanced meaning that it takes coax directly.

Dipoles, yagis and log periodics are balanced meaning they need twinlead
or a balun and coax.

The only antenna that needs a ground (for signal purposes) is a ground
plane antenna where the ground plane is, well, the ground, ie the antenna
is a vertical tower insulated from the ground. This would also include
long wire antennas.

A CB that can transmit more than 5 watts, or can transmit on any other
frequency (including those between the channels) than the allocated 40 channels,
or use methods other than CW, AM, or SSB. If you use a ham radio as a CB, then
it is considered an illegal CB as would a linear or modulator.

Using a ham radio as a CB is just as illegal, so there's no difference there. As far as cars with antennas, the antenna is dependent on the frequency used, not the type of radio, so they would still have to use a CB antenna, even with a ham radio. At any rate, they'd have a hard time justifying a stop based on the simple fact that you have an antenna on your car. Where's the probable cause?

As is often the case, if someone does something they don't like they
can always charge them with disturbing the peace. I think that's what
was used in this case, but unsuccessfully.

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a team of G-men protect the president while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some models, like the early Uniden SportCats and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $1500 Icom R8500 and $2000 AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC895XLT, BC245XLT, SC200, and Radio Shack PRO-91 and PRO-94 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites. The ICOM IC-R2 and Yaesu VR-500 are the two smallest "pocket" scanners which perform. Both are tiny enough to fit comfortably in a shirt pocket so you can monitor without attracting undue attention.

Looking for value? At $170 discount price, the 100 channel Uniden/Bearcat BC278CLT base is a good value and available at most Sears and Best Buy stores. The Uniden Sportcat SC200 portable performs very well is an excellent value at its $220 street price.

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your

scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, http://www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance. The Premier (Prime) RD-9 and RD-9SMA are about the same length but even thinner.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas. The Austin Condor is available from Grove Enterprises.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna Co., Inc. and is designed to cover both the 2 meter

and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A (available from Amateur Electronic Supply) or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (828)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove-ent.com

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is http://www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is http://www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. Modifying any scanner to receive cellular phone signals is now considered illegal. By federal regulation, new scanner models must be designed to they cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/hamradio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the

Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (http://www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 7825 Black Street Rd., LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial

broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 828-837-9200, http://www.grove-ent.com) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the

public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM. The PerCon Spectrum CDROM sells for under $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM, too.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)

dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes an extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an

invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

Other scanner mailing lists include: scanner@onelist.com, scan-l@onelist.com, scanner@qth.net, and sonofrcma@onelist.com.

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about

4 PM. You must purchase a lunch since we get the room for

free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.
